Pearson Edexcel Level 3 GCE

Monday 22 May 2023

Afternoon (Time: 1 hour 30 minutes)

Paper reference **8PS0/02**

Psychology

Advanced Subsidiary

PAPER 2: Biological Psychology and Learning Theories

You do not need any other materials.

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical tables are printed at the start of this paper.
- Candidates may use a calculator.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

26	31.80	35.56	38.89	41.92	45.64	54.05
27	32.91	36.74	40.11	43.20	46.96	55.48
28	34.03	37.92	41.34	44.46	48.28	56.89
29	35.14	39.09	42.56	45.72	49.59	58.30
30	36.25	40.26	43.77	46.98	50.89	59.70
40	47.27	51.81	55.76	59.34	63.69	73.40
50	58.16	63.17	67.51	71.42	76.15	86.66
60	68.97	74.40	79.08	83.30	88.38	99.61
70	79.72	85.53	90.53	95.02	100.43	112.32

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

Mann-Whitney U test formulae

$$U_a = n_a n_b + \frac{n_a(n_a+1)}{2} - \sum R_a$$

$$U_b = n_a n_b + \frac{n_b(n_b+1)}{2} - \sum R_b$$

(U is the smaller of U_a and U_b)

Critical values for the Mann-Whitney U test

Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference

- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

Critical values for the Wilcoxon Signed Ranks test

<i>n</i>	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

Answer ALL questions.

SECTION A: BIOLOGICAL PSYCHOLOGY

- 1** When studying biological psychology, you will have learned about Freud's psychodynamic explanation of aggression.

- (a) Complete **Table 1** with the name for the different parts of the personality in the space provided.

(3)

Definition	Part of the personality
This part of the personality is rational and tries to balance the conflicting demands of other parts of the personality. It operates according to reality (the 'reality principle') and tries to satisfy pleasure (the 'pleasure principle') in a socially responsible way.	
This part of the personality tries to impose moral standards on the individual and includes the conscience and what a person should be like (the 'ego ideal'). It operates according to morality (the 'morality principle') and tries to impose right and wrong in relation to pleasure, including forbidden behaviour such as aggression.	
This part of the personality focuses on pleasure and satisfying instinctual urges an individual may have. It operates according to pleasure (the 'pleasure principle') and does not understand logic, so it becomes frustrated, potentially leading to aggressive urges if denied pleasure.	

Table 1

(b) Explain **two** weaknesses of Freud's psychodynamic explanation of aggression.

- 6 Claire recently got a new puppy and it will not sit when she commands it to. She is deciding whether to take her puppy to a dog training school. During the dog training class, a dog biscuit is given to the puppy as a treat when it sits after the owner commands it to.

Claire asked to observe a session of the dog training class before she decides to take her puppy to a training school.

The dog training classes were divided into two groups:

- Group A – 25 puppies that had received the training.
- Group B – 25 puppies that had not yet received the training.

Claire tallied the number of puppies in each group that sat when their owner commanded them to.

Claire's results are shown in **Table 2** below.

	Puppies that sat on command	Puppies that did not sit on command
Group A: Puppies that had received the training	20	5
Group B: Puppies that had not yet received the training	10	15

- (b) Complete **Table 3** to calculate the chi-squared for Claire's data to **two** decimal places.

(4)

		Observed	Expected	O-E	(O-E) ²	(O-E) ² / E
Group A: Puppies that had received the training	Puppies that sat on command	20	15			
	Puppies that did not sit on command	5	10			
Group B: Puppies that had not yet received the training	Puppies that sat on command	10	15			
	Puppies that did not sit on command	15	10			
Chi-squared =
