Psychology

Advanced Subsidiary
Paper 2: Biological Psychology and Learning Theories

Thursday 17 May 2018 – Afternoon
Time: 1 hour 30 minutes

Paper Reference
8PS0/02

You do not need any other materials.

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- The list of formulae and statistical tables are printed at the start of this paper.
- Candidates may use a calculator.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

Pearson

FORMULAE AND STATISTICAL TABLES

Standard deviation (sample estimate)

$$\sqrt{\left(\frac{\sum(x-\bar{x})^2}{n-1}\right)}$$

Spearman's rank correlation coefficient

$$1-\frac{6\sum d^2}{n(n^2-1)}$$

Critical values for Spearman's rank

	Level of significance for a one-tailed test				
	0.05	**0.025**	**0.01**	**0.005**	**0.0025**
	Level of significance for a two-tailed test				
N	**0.10**	**0.05**	**0.025**	**0.01**	**0.005**
5	0.900	1.000	1.000	1.000	1.000
6	0.829	0.886	0.943	1.000	1.000

23	28.43	32.01	35.17	38.08	41.64	49.73
24	29.55	33.20	36.42	39.36	42.98	51.18
25	30.68	34.38	37.65	40.65	44.31	52.62
26	31.80	35.56	38.89	41.92	45.64	54.05
27	32.91	36.74	40.11	43.20	46.96	55.48
28	34.03	37.92	41.34	44.46	48.28	56.89
29	35.14	39.09	42.56	45.72	49.59	58.30
30	36.25	40.26	43.77	46.98	50.89	59.70
40	47.27	51.81	55.76	59.34	63.69	73.40
50	58.16	63.17	67.51	71.42	76.15	86.66
60	68.97	74.40	79.08	83.30	88.38	99.61
70	79.72	85.53	90.53	95.02	100.43	112.32

The calculated value must be equal to or exceed the critical value in this table for significance to be shown.

Mann-Whitney U test formulae

$$U_a = n_a n_b + \frac{n_a(n_a+1)}{2} - \sum R_a$$

$$U_b = n_a n_b + \frac{n_b(n_b+1)}{2} - \sum R_b$$

(U is the smaller of U_a and U_b)

19	12	17	22	28	33	39	45	51	56	63	69	74	81	87	93	99
20	13	18	24	30	36	42	48	54	60	67	73	79	86	92	99	105

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

Wilcoxon Signed Ranks test process

- Calculate the difference between two scores by taking one from the other
- Rank the differences giving the smallest difference Rank 1

  Note: do not rank any differences of 0 and when adding the number of scores, do not count those with a difference of 0, and ignore the signs when calculating the difference
- Add up the ranks for positive differences
- Add up the ranks for negative differences
- T is the figure that is the smallest when the ranks are totalled (may be positive or negative)
- N is the number of scores left, ignore those with 0 difference

Critical values for the Wilcoxon Signed Ranks test

	Level of significance for a one-tailed test		
	0.05	0.025	0.01
	Level of significance for a two-tailed test		
n	0.1	0.05	0.02
N=5	0	-	-
6	2	0	-
7	3	2	0
8	5	3	1
9	8	5	3
10	11	8	5
11	13	10	7
12	17	13	9

The calculated value must be equal to or less than the critical value in this table for significance to be shown.

Answer ALL questions.

SECTION A: BIOLOGICAL PSYCHOLOGY

1 You will have learned about the classic study by Raine et al. (1997).

Explain **two** strengths of Raine et al.'s (1997) study.

Strength 1

Strength 2

(Total for Question 1 = 4 marks)

2 You were required to carry out a practical investigation in biological psychology.

(a) State the hypothesis for your practical investigation in biological psychology.

(2)

(b) Describe **one** ethical consideration you accounted for during your practical investigation in biological psychology.

(2)

(c) Describe the outcome of your Spearman's rho test for your practical investigation in biological psychology.

(2)

(d) Explain **two** improvements you could make to your practical investigation in biological psychology.

(4)

(Total for Question 2 = 10 marks)

3 Belinda is an 11-month-old child whose parents were recently contacted by her nursery staff. They informed Belinda's parents that Belinda is aggressive towards other children. She has pushed other children over, taken their toys, and has shouted at the nursery staff.

(a) Describe how Freud's psychodynamic theory could explain Belinda's aggressive behaviour.

(3)

(b) Explain **one** strength and **one** weakness of Freud's psychodynamic explanation of aggression.

(4)

Strength

Weakness

(Total for Question 3 = 7 marks)

4 Evaluate **one** adoption study that you have learned about in biological psychology.

(8)

(Total for Question 4 = 8 marks)

TOTAL FOR SECTION A = 29 MARKS

SECTION B: LEARNING THEORIES

5 Malcolm carried out a non-participant observation in a local nursery to find out whether older children or younger children are more aggressive.

(a) Describe non-participant observation as a human research method.

(3)

(b) Describe how Malcolm could use event sampling in his non-participant observation at the local nursery.

(2)

Malcolm observed 12 children from the local nursery:

- six children aged one to two years old (Group A)
- six children aged three to four years old (Group B).

The results of Malcolm's observation are shown in **Table 1**.

Group A	Number of aggressive acts observed for children aged one to two years old	Group B	Number of aggressive acts observed for children aged three to four years old
1	11	1	22
2	14	2	15
3	15	3	18
4	7	4	17
5	7	5	24
6	6	6	24
	Mean score = 10		Mean score = 20

Table 1

(c) Calculate the median number of aggressive acts observed for children aged one to two years old (Group A).

(1)

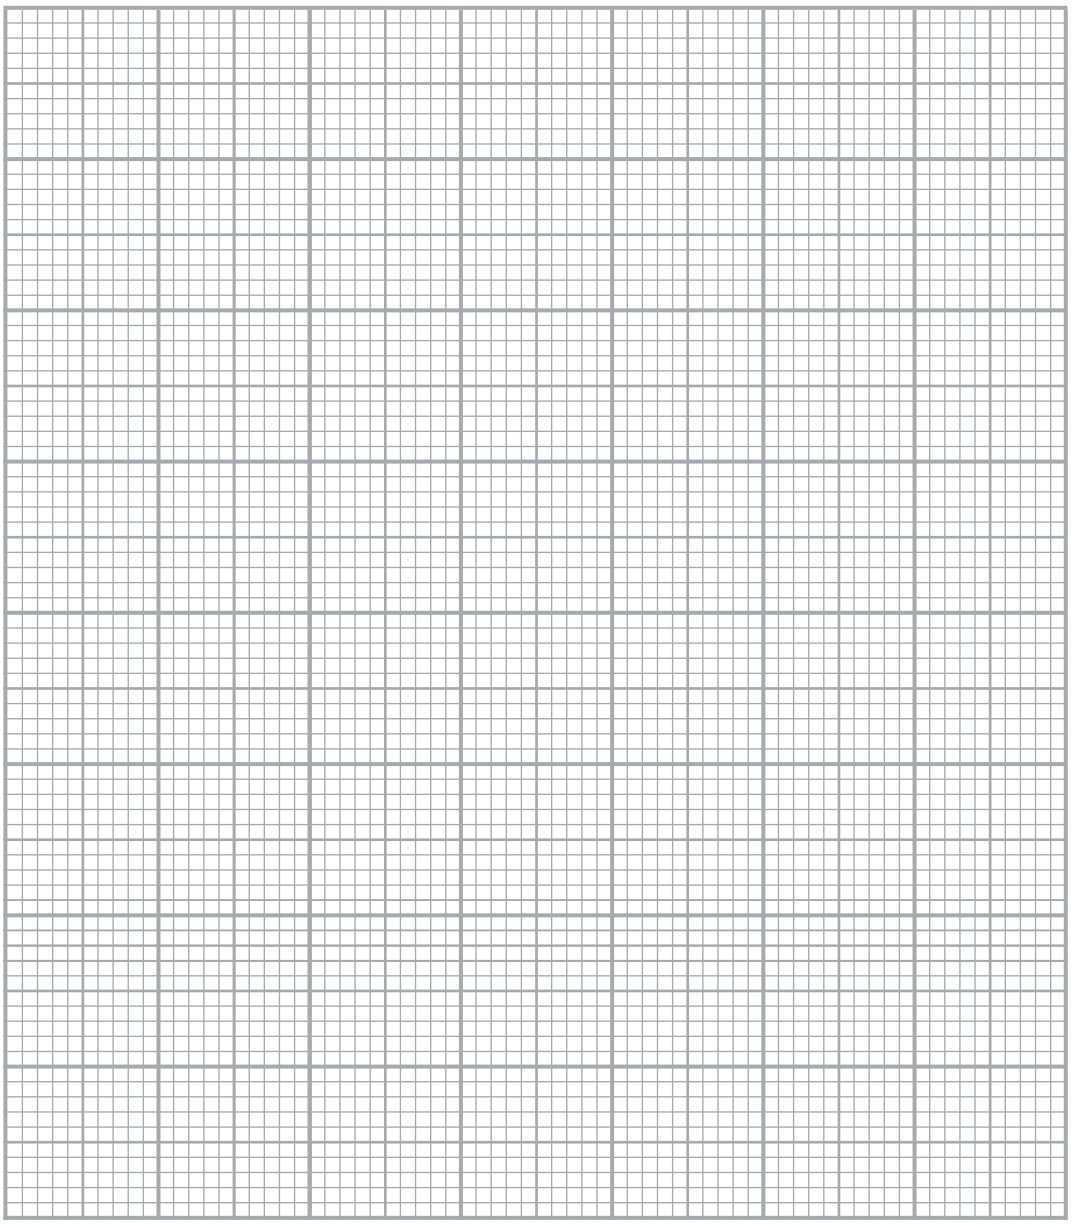
SPACE FOR CALCULATIONS

Median number of aggressive acts observed for children aged one to two years old (Group A) .....

(d) Draw a bar chart to display the mean number of aggressive acts for children aged one to two years old (Group A) and for children aged three to four years old (Group B), as shown in **Table 1**.

(3)

Title



(e) Explain **one** participant variable that Malcolm could have controlled for when planning his observation at the local nursery.

(2)

.....

.....

.....

.....

.....

.....

(Total for Question 5 = 11 marks)

6 Matilda has been diagnosed with a phobia of buttons. She has been undergoing systematic desensitisation therapy for three months, which has been unsuccessful. Her therapist has decided to try an alternative treatment for her phobia.

Describe **one** treatment, other than systematic desensitisation, that the therapist could use with Matilda.

(Total for Question 6 = 4 marks)

7 (a) Describe content analysis as a research method used in psychology.

(4)

(b) Explain **one** weakness of content analysis as a research method used in psychology.

(2)

(Total for Question 7 = 6 marks)

8 You will have learned about the classic study by Watson and Rayner (1920) Little Albert.

Evaluate the classic study by Watson and Rayner (1920) Little Albert.

(8)

(Total for Question 8 = 8 marks)

TOTAL FOR SECTION B = 29 MARKS

SECTION C

9 Harrison and two of his friends were arrested for fighting whilst watching their local football club play against a rival team. During the fight Harrison's friends cheered him on and encouraged him to fight supporters from the opposing team. Harrison was arrested by the police and did not see the rest of the football match.

Evaluate how operant conditioning and brain functioning could explain Harrison's aggressive behaviour. You must make reference to the context in your answer.
