

Monday 4 October 2021 – Afternoon

A Level Psychology

H567/01 Research methods

Time allowed: 2 hours

You must have: · a scientific or graphical calculator

Please write clearly in black ink. Do not write in the barcodes.								
Centre number					Candidate number			
First name(s)								
Last name								

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer all the questions.

INFORMATION

- The total mark for this paper is 90.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 20 pages.

ADVICE

· Read each question carefully before you start your answer.

[1]

2

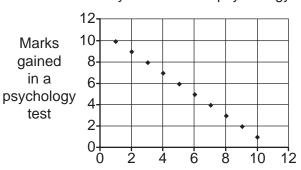

SECTION A: Multiple choice

Answer all the questions. You should put the letter of the correct answer in the box provided.

1	In a study investigating use of mobile phones, the following behavioural categories are used: texting; phoning; browsing; gaming and listening to music. What kind of data will be collected?					
	Α	interval				
	В	nominal				
	С	ordinal				
	D	secondary				
	You	r answer	[1]			
2	If th	e standard deviation for a set of scores is 6.3, what is the variance?				
	Α	2.51				
	В	6.3				
	С	12.6				
	D	39.69				

3 (a) Which correlation coefficient is represented in the data displayed in this scatter diagram?

Scatter diagram to show the correlation between hours participants spend on social media each day and marks in psychology test

Hours spent on social media each day

Α.	- 1		\sim
А	-1	٠.	U

Your answer

B -10.0

C +1.0

D +10.0

Your answer [1]

© OCR 2021

	(b)	How	many participants' data are displayed in this scatter diagram?	
		Α	5	
		В	10	
		С	12	
		D	20	
		Your	answer	[1]
4	Whi	ch of	these would you not find in the appendices of the write-up of a practical report?	
	Α	calcu	ulations	
	В	ideas	s for future related research	
	С	raw	data	
	D	stand	dardised instructions	
	You	r ans\	wer	[1]
5	Wha	at is th	ne 'Harvard system'?	
	Α	a wa	y of measuring obedience	
	В	a wa	y of obtaining participants for research	
	С	a wa	y of ranking data	
	D	a wa	y of referencing academic research	
	You	r ans\	wer	[1]
6	Wha	at leve	el of data and type of design are required to use the Mann-Whitney U test?	
	Α	nomi	inal data with independent measures design	
	В	nomi	inal data with repeated measures design	
	С	ordin	nal data with independent measures design	
	D	ordin	nal data with repeated measures design	
	You	r ansv	wer	[1]

7	What is a 'peer review'?			
	Α	a check by other psychologists before research is published		
	В	a study of existing published research in the same area		
	С	comments made by the public prior to publication		
	D	ratings of the usefulness of the research prior to publication		
	You	r answer	[1]	
8	Whi	ch is true of a quasi experiment?		
	Α	has a naturally occurring independent variable		
	В	has an artificial independent variable		
	С	has no independent variable		
	D	has two independent variables		
	You	r answer	[1]	
9	Whi	ch of these is a type of inferential statistical test?		
	Α	parabolic		
	В	paradoxical		
	С	parametric		
	D	parasympathetic		
	You	ranswer	[1]	
10	Whi	ch of these statements is true?		
	Α	interval data can be treated as ordinal data for analysis		
	В	nominal data can be ranked for analysis		
	С	nominal data cannot be statistically analysed		
	D	ordinal data can be treated as interval data for analysis		

11	hich of these is a British Psychological Society ethical consideration when conduc sychological research?	ting
	compassion	
	competence	
	compliance	
	compromise	
	our answer	[1]
12	/hich of these is not a type of interview?	
	semi-structured	
	structured	
	unstructured	
	unsupported	
	our answer	[1]
13	order to use the chi-square test, the expected values (E) of each category of data collectust be worked out first. What is the E value of the data in category cell (a) in the following tal	
	(a) (b) 12 8	
	(c) (d) 16 4	
	$xpected value = \frac{Row total \times Column total}{N}$	
	14	
	20	
	28	
	40	
	our answer	[1]

14		In the study by Blakemore and Cooper (1970) investigating the impact of early visual experience, what was the dependent variable?		
	Α	the age of the kittens		
	В	the environment the kittens had been raised in		
	С	the neural changes in the visual cortex of the kittens		
	D	the sex of the kittens		
	You	r answer [1]		
15		ich of the following best describes the research methods used in the study of moral development ducted by Kohlberg (1968)?		
	Α	field experiment and observation		
	В	field experiment and self-report		
	С	longitudinal and observation		
	D	longitudinal and self-report		
	You	r answer [1]		
16	Whi	ich of these is a type of observation?		
	Α	likert		
	В	matched		
	С	quasi		
	D	unstructured		
	You	r answer [1]		

17	Wh	hat is the purpose of the abstract in the write-up of a practical report?					
	Α	to provide a replicable account of the research					
	В	to provide a summary of the research					
	С	to provide details of existing previous research					
	D	to provide details of the raw data from the research					
	Υοι	ur answer [1]				
18	Wh	ich of the following could help reduce demand characteristics?					
	Α	debriefing the participants					
	В	deceiving the participants					
	С	harming the participants					
	D	paying the participants					
	You	ur answer [1]				
19	In the Lee et al. study (1997) of lying and truth telling, which of these best describes the sample used?						
	Α	Chinese and American children					
	В	Chinese and Canadian children					
	С	Japanese and American children					
	D	Japanese and Canadian children					
	Υοι	ur answer [1]				

QUESTION 20 BEGINS ON PAGE 8

SECTION B: Research design and response

Answer **all** the questions.

Because I'm happy

The word happy is repeated 56 times in Pharrell Williams' song "Happy". But what is happiness? What makes people happy and why? Knowing more about this key emotion would be interesting and could even be beneficial to help understand and treat some affective disorders (such as depression). However, happiness may be unique to each individual so a more personal approach using a self-report is needed to find out more about people's ideas and experiences of this emotion.

A team of psychologists is considering conducting self-report research into people's ideas and experiences of happiness.

20	Out	line what the self-report research method involves.	
		[
21	(a)	Give details of the sample (participants) they would use to obtain data from in this study.	
		[2]
	(b)	Outline how they could use a self-selected sampling technique to obtain the participants f this study.	or
		1	31

	Outline one weakness of using a self-selected sampling technique to obtain participants for this study.
	[3]
	lain how you would conduct a study using the self-report method to investigate happiness. ify your decisions as part of your explanation. You must refer to:
	two closed questions you would use
	two open questions you would use two rating scale questions (one Likert, one semantic differential)
•	how the self-report will be administered (completed by the participants)
You	should use your own experience of practical activities to inform your response. [15]

23	Out	line two weaknesses of using the self-report method in this study.
	••••	
		[4]
		[-1]
24	(a)	Outline the sampling technique you used to obtain the participants for any one of your own practical activities.
		[3]
	(b)	Outline one strength of using this sampling technique to obtain the participants for that practical activity.
		[3]

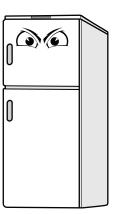

SECTION C: Data analysis and interpretation

Answer **all** the questions.

Cold stare, you dare!

Controlling what we eat can be a challenge and any new idea may help. One psychologist has been investigating the effect of putting a picture of a pair of eyes on a fridge door to see if this can help reduce going to the fridge for snacks. She conducted an experiment using a small sample of 12 participants obtained using snowball sampling. For one week participants kept a record of the number of times they went into the fridge in-between meals for a snack (cheese, chocolate, fruit etc). The following week a pair of eyes was placed on the fridge door and the same participants were again asked to keep a record of the number of times they got a snack from the fridge. The data is presented below.

Number of times snacks take from fridge during one week				
Participant	Without eyes on fridge door	With eyes on fridge door		
а	14	10		
b	21	18		
С	32	24		
d	28	24		
е	20	16		
f	8	10		
g	26	24		
h	12	12		
i	22	23		
j	18	12		
k	20	19		
1	21	21		

25	(a)	Calculate the mean for the number of snacks taken from the fridge in the week without eyes on the door. Show your workings and write your answer to three significant figures.
		[3]
	(b)	Calculate the median and range for the number of snacks taken from the fridge in the week with eyes on the door. Show your workings.
		[3]
26		e snacking of participant (c) was less during the week with eyes on the fridge than in the week nout eyes on the fridge. Calculate this reduction as a percentage. Show your workings.
		[3]

27 (a) What does the information from the standard deviation for each condition from this study presented below inform us?

Standard deviation for each condition				
Without eyes on fridge door	With eyes on fridge door			
6.726	5.613			

	[3]
(b)	Outline one strength of using the standard deviation rather than the variance as the measure of dispersion for the data collected in this study.
	[3]

frequer	nt sign						the leas
							[5

Turn over for the next question

29 (a) Using the extract of the table of critical values for the Wilcoxon T Signed Ranks test presented below, what is the critical value for a two-tailed test at the 5% probability level for data collected in this study?

Extract of table of critical values for Wilcoxon T Signed Ranks test (*T* is significant if it is **less than or equal** to the table value)

	level of significance for a one-tailed test								
NI	.10	.05	.025	.01	.005	.001			
N	level of significance for a two-tailed test								
	.20	.10	.05	.02	.01	.002			
4	0								
5	2	0							
6	4	2	0						
7	6	3	2	0					
8	8	5	3	1	0				
9	11	8	5	3	1				
10	14	10	8	5	3	0			
11	17	13	10	8	5	3			
12	21	17	13	10	7	5			

	[2]
(b)	Write the significance statement for the analysis carried out in Question 28 with a probability
	of 5%, assuming a non-directional hypothesis.
	[2]

	(C)	Identify two of the criteria for using a parametric test to analyse data.	C.
		[2]
30	affe	ine one way that the sampling technique used to obtain participants for this study could have ted the generalisability of the data collected in this study.	
		г	
31	(a)	Outline one advantage of having quantitative data in this study.	၁]
	(-7		
		[3]
	(b)	Outline one disadvantage of not having qualitative data in this study.	
			 31
