

Q1.

A psychologist wanted to investigate teachers' opinions on differences in the way younger children and older children responded to instructions in class. Previous research showed inconsistent findings. The psychologist randomly selected five schools from all the primary schools in their city. Four of the five schools agreed to take part. The psychologist wrote six questions and interviewed the teachers of Year 2 and Year 5 in the four schools, asking each teacher the same six questions in the same order.

Identify **one** ethical issue that should have been addressed in this study. Explain why it should have been addressed and how it could have been dealt with.

(Total 3 marks)

Q2.

Outline **one** ethical issue that has arisen in social influence research. Refer to **one or more** social influence studies in your answer.

(Total 4 marks)

Q3.

There are many examples of socially sensitive research in psychology.

Outline what social sensitivity means in the context of psychology. Explain how researchers in psychology could deal with issues related to social sensitivity.
