Paper 3 Theory (Core)

May/June 2024

2 hours

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 120.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

This document has 32 pages. Any blank pages are indicated.

1 (a) A student watches some scary movies.

The average pulse rate of the student is measured during each movie.

The highest pulse rate of the student is also recorded.

Table 1.1 shows the results.

Table 1.1

movie	average pulse rate during the movie / beats per minute	highest pulse rate / beats per minute	difference in pulse rate / beats per minute
Α	82	122	40
В	79	116	37
С	84	132	48
D	80	123	43
E	86	104	18

The student has a 'flight or fight' response to the movies causing adrenaline to be released.

	heart kid	lney	ovary	stomach	skin	[1]
(iv)	Circle the target or	gan for adrena	line that causes	the results in Table	e 1.1.	
			total =		beat	s [2]
	Using the average	pulse rate, cal	culate the total r	number of heart bea	ats during the m	ovie.
(iii)	Movie D lasts 2 hou	urs.				
						[1]
(ii)	Identify the movie i	n Table 1.1 tha	at results in the	greatest release of	adrenaline.	
						[1]
(i)	Identify the movie i	n Table 1.1 tha	at results in the l	lowest average pu	se rate.	

(b)	Stat	e two other effects of adrenaline on the body.	
	Doı	not include the effect on pulse rate.	
	1		
	2		
<i>(</i> - <i>)</i>	01-1		[2]
(c)	Stat	te the component of blood that transports the hormone adrenaline.	
			[1]
(d)	The	'flight or fight' situation is a response to a change in the environment.	
	This	s is an example of one of the characteristics of living things.	
	(i)	State the name of this characteristic.	
			[1]
	(ii)	State the name of one other characteristic of living things.	
			[1]
		[Total:	10]

2	(a)	The	list gives the names of seven elements.				
			calcium				
			carbon				
			copper				
			oxygen				
			nitrogen				
			potassium				
			sulfur				
		Ans	wer the questions about these elements.				
		Eac	h element may be used once, more than once or not at all.				
	State which element:						
		(i)	is in Group I of the Periodic Table.				
				[1]			
		(ii)	is in diamond.				
				[1]			
		(iii)	is 78% of clean air.				
				[1]			
		(iv)	gives a lilac flame test.				
				[1]			
		(v)	is used in electroplating.				
				[1]			
		(vi)	is used in the manufacture of sulfuric acid.				
				[1]			

[Total: 9]

(b)	Atoms contain protons, neutrons a	and electrons.	
	State which of these particles:		
	are in shells around the nucleus		
	have a positive charge		
	have the smallest mass.		[2]
			[3]

- **3** (a) Doctors use ionising and non-ionising radiations in hospitals.
 - (i) Table 3.1 lists some radiations.

Table 3.1

radiation	ionising
alpha (α)	
beta (β)	
gamma (γ)	✓
ultrasound	×
X-rays	

Put a tick (\checkmark) in each row of Table 3.1 to show which radiations are ionising and a cross (X) to show which radiations are **not** ionising.

	Two have been done for you.	[2]
(ii)	Describe one adverse effect of ionising radiations on living things.	
		[1]
(iii)	Place alpha (α), beta (β) and gamma (γ) radiations in order of their relative penetral ability.	ting
	most penetrating	
	least penetrating	[1]
(iv)	State one use of X-rays in a hospital.	
		[1]
(v)	Ultrasound waves are used to scan unborn babies.	
	Ultrasound waves have a frequency above the maximum audible frequency for a hum	ıan.
	Suggest a frequency for ultrasound waves.	
	State the unit of your answer.	
	frequency = unit	[2]

(b) (i) Gamma (γ) radiation is used in hospitals to destroy cance

Fig. 3.1 shows an incomplete electromagnetic spectrum.

Write gamma (y) radiation in its correct place.

(c)

X-rays microwaves radio waves

Fig. 3.1

	[1]
(ii)	State the region of the electromagnetic spectrum where the waves have the lowest frequency.
	[1]
	dioactive isotope of iodine, iodine-123, is used by a doctor to examine the thyroid gland of atient.
The	nuclide notation for the isotope is $^{123}_{53}$ I.
Stat	te what the numbers 123 and 53 represent.
123	
E 2	

[Total: 11]

[2]

4 (a) Fig. 4.1 is a diagram of the female reproductive system in humans.

Fig. 4.1

The boxes on the left show the letters of some of the parts in Fig. 4.1.

The boxes on the right show some functions.

Draw one line from each letter to its function.

	release of female gametes
Α	site of fertilisation
В	where fetus develops
С	ring of muscle at opening of uterus
D	produces semen
	receives penis during sexual intercourse

[4]

(b) A survey records the length of the menstrual cycle in a sample of females.

Fig. 4.2 shows a bar chart of the results.

Fig. 4.2

		1 lg. 7.2	
	(i)	State the most frequent length of the menstrual cycle shown in Fig. 4.2.	
			[1]
	(ii)	State the number of females that have a 26-day menstrual cycle shown in Fig. 4.2.	
			[1]
(c)	Stat	te the name of the female gamete in humans.	
			[1]

(d) The list shows several processes that occur before the development and birth of a baby.

Put the stages in the correct order.

Two have been done for you.

fertilisation

formation of embryo

formation of zygote

implantation

release of female gamete

[2]

(e) State where fertilisation occurs in **plants**.

.....[1]

[Total: 10]

11

BLANK PAGE

5	(a)	Ethanol	has the	formula	C ₂ H ₅ OH.
---	-----	---------	---------	---------	-----------------------------------

Complete Fig. 5.1 to show the structure of an ethanol molecule.

$\mathsf{C} - \mathsf{C}$

		Fig. 5.1	[2]
(b)	Etha	anol is used as a fuel.	
	(i)	State one other use for ethanol.	
	(ii)	Write the word equation for the complete combustion of ethanol. +	
			[2]
	(iii)	The combustion of ethanol is an exothermic reaction.	
		State what is meant by an exothermic reaction.	
			. [1]
(c)	Etha	anol is made from ethene.	
	Eth	ene reacts at high temperatures with substance X in the presence of a catalyst.	
	(i)	State the name of substance X .	
			. [1]
	(ii)	Describe the effect of a catalyst on chemical reactions.	
			. [1]
	(iii)	State one other method of making ethanol.	
			[4]

(d)	Ethanol is a liquid at room temperature.
	Describe the motion and separation of the particles in ethanol.
	motion
	separation[2]
	[2]
	[Total: 11]

6 (a) A farmer drives his tractor in a field.

Fig. 6.1 shows the forces **J**, **K**, **L** and **M** acting on the tractor as the tractor accelerates towards the right.

Fig. 6.1

(i) State which force J, K, L or M is the weight of the tractor.

(ii) Explain why force **K** must be greater than force **M**.

(b) Fig. 6.2 shows a speed-time graph for the tractor as it travels across the field.

Fig. 6.2

(i) Describe the motion of the tractor during the section PQ.

[1]

(ii) Calculate the distance travelled by the tractor during section QR.

(c)	The tractor pulls a tank full of water.
	The mass of the water is 2500 kg.
	The density of water is 1000 kg/m ³ .
	Calculate the volume of the water.
	volume = m ³ [2]
(d)	Suggest two renewable sources of energy that the farmer uses to generate electricity for the farm.
	1
	2
	[2]
	[Total: 9]

7 (a) A student investigates the effect of light on an aquatic plant.

The student counts the number of bubbles of gas released in one minute by the aquatic plant kept in the light.

The experiment is repeated with the aquatic plant kept in the dark.

Table 7.1 shows the results.

Table 7.1

environmental condition	number of bubbles of gas released in one minute
light	32
dark	0

(i)	Complete the sentences to explain the results shown in Table 7.1.	
	The aquatic plant releases more bubbles of gas w	/hen
	kept in the light.	
	This is because the process of requires energy from I	ight.
	This energy is used to react the raw materials	
	and	
	This process takes place in plant cell structures called	 [4]
(ii)	State the name of the response that causes plants to grow towards light.	۲۰1
		F 4 7

[Total: 11]

(b) Fig. 7.1 is a photomicrograph of a cross-section through a leaf.

Fig. 7.1

(ii) State the names and functions of the two transport tissues contained in the part labelle Y in Fig. 7.1. name 1 function
Y in Fig. 7.1.
function
name 2
function
(c) Describe the importance of nitrate ions in the synthesis of proteins.

[1]

			18	
8	A te	eache	er reacts sodium with water.	
	Нус	droge	en and aqueous sodium hydroxide are the products of the reaction.	
	(a)	Bal	ance the symbol equation for this reaction.	
			2Na + $H_2O \rightarrowNaOH + H_2$	[2]
	(b)	Bef	ore sodium is added to water, the water is neutral.	
		Aqu	ueous sodium hydroxide is an alkali.	
		(i)	State the pH number of pure water.	
			pH =	[1]
		(ii)	Suggest the pH number of the aqueous sodium hydroxide.	
			pH =	[1]
	(c)	The	e reaction between sodium and water is described as violent.	
		Des	scribe the reaction between potassium and water.	
		Exp	olain your answer.	
		rea	ction	
		exp	lanation	
				[2]
	(d)	Soc	lium reacts with chlorine to make sodium chloride.	
		In t	nis reaction, sodium atoms form sodium ions and chlorine atoms form chloride ions.	
		•	the electronic structure of a sodium atom is 2.8.1 the electronic structure of a chlorine atom is 2.8.7	
		(i)	Deduce the electronic structure for a sodium ion	

.....[1]

© UCLES 2024 0654/33/M/J/24

(ii) Deduce the electronic structure for a chloride ion.

(e)	When concentrated aqueous sodium chloride is electrolysed, gases are released at each inert electrode.
	State the names of the gases released at each electrode.
	gas at cathode
	gas at anode
	[2
	[Total: 10

9 (a) Fig. 9.1 shows water in a steel saucepan being heated on an electric cooker.

The water boils and some of the water changes into steam.

Fig. 9.1

(i)	State the main method of thermal energy transfer through:	
	the water	
	the saucepan.	
(ii)	Describe what happens to the temperature of the water while it is boiling.	[2
(iii)	State the boiling point of water.	. [1]
	$\circ c$. [1

(iv) Steel is a solid, water is a liquid and steam is a gas.

Complete Table 9.1 by placing ticks (\checkmark) in the correct boxes to show which description describes a solid, a liquid and a gas.

Table 9.1

description	solid	liquid	gas
it takes up all the space available			
it takes up the shape of its container and has a constant volume in an open container			
it has a fixed shape			

[1]

	•
(b)	The saucepan is made from steel.
	Describe one difference between the magnetic properties of steel and the magnetic properties of soft iron.
	[1]
(c)	The weight of the saucepan is 15 N.
	Calculate the mass of the saucepan in grams .
	The gravitational force on unit mass, $g_1 = 10 \mathrm{N/kg}$.

mass = g [2]

(d) The two hotplates on the cooker are connected in parallel so that each can be controlled by a separate switch.

Complete the circuit diagram in Fig. 9.2 for the cooker hotplates.

Use the circuit symbol for a heater — to represent the hotplates.

Fig. 9.2

[3]

[Total: 11]

BLANK PAGE

[2]

10 Fig. 10.1 is a diagram of the carbon cycle.

Fig. 10.1

(a)	Identify the processes occurring at X , Y and Z in Fig. 10.1.
	x
	Υ
	Z
	[3
(b)	The concentration of carbon dioxide in the atmosphere is increasing.
	Use Fig. 10.1 to state two ways humans could increase the removal of carbon dioxide from the atmosphere.
	1
	2
	[2
(c)	Process A occurs in food chains.
	Complete the sentences to define the term food chain.
	A food chain is the transfer of from one organism to the next
	beginning with a

(d)	Carbon dioxide dissolves in oceans, acidifying them.
	State two sources of water pollution.
	1
	2
	[2]
	[Total: 9]

11 (a) Iron is a metal.

Circle three physical properties which are characteristic of metals.

good electrical conductor high melting point

low boiling point malleable

poor thermal conductor

[2]

(b) Fig. 11.1 shows a spanner made from an alloy of iron.

Fig. 11.1

The composition of the alloy is shown in Table 11.1.

Table 11.1

element	percentage composition %
carbon	
chromium	2
iron	95
manganese	1

(i) Calculate the percentage of carbon in the alloy.

percentage =% [1]

(ii) The mass of the spanner is 80 g.

Calculate the mass of chromium contained in the spanner.

mass of chromium = g [1]

(iii) Suggest why the spanner is made from an alloy of iron and **not** pure iron.

......[1]

(c)	Iron	is extracted from iron oxide using carbon monoxide.	
		iron oxide + carbon monoxide \rightarrow iron + carbon dioxide	
	Stat	te the substance that is reduced in this reaction.	
			[1]
(d)	Iron	reacts with two substances to make rust.	
	(i)	Name the element and the compound that react with iron to make rust.	
		element	
		compound	
			[2]
	(ii)	Barrier methods are used to stop iron rusting.	
		Name one substance used in a barrier method of rust prevention.	
			[1]
(e)	Red	cycling iron costs less than extracting iron from iron ore.	
	Sug	gest one other reason why iron needs to be recycled.	
			[1]
		[Total:	10]

12 (a) A student investigates the motion of smoke particles in air using a microscope.

Fig. 12.1 shows the apparatus the student uses.

Fig. 12.1

The student sees the smoke particles moving in random directions.

This movement is caused by collisions between smoke particles and moving molecules in the air.

Fig. 12.2 shows the path of one smoke particle observed by the student.

Fig. 12.2

State the name given to the motion of the smoke particles observed by the student.

.....[1]

(b) The lamp in Fig. 12.1 has a current of 0.40A in it when the potential difference across it is 3.0 V.

Calculate the resistance of the lamp.

resistance =
$$\Omega$$
 [2]

(c) The microscope in Fig. 12.1 contains lenses.

Fig. 12.3 shows a ray of light from the top of a smoke particle passing through a thin converging lens.

Fig. 12.3

(i) Draw a second ray from the top of the smoke particle to locate the position of the top of the image.

Label the top of the image with the letter I.

[2]

- (ii) On Fig. 12.3, label the principal focus of the lens with the letter **F**. [1]
- (iii) On Fig. 12.3, use a double headed arrow (\leftrightarrow) or (\updownarrow) to show the focal length of the lens. [1]
- (iv) Circle the two correct words or phrases that describe the image.

diminished enlarged inverted same size upright [2]
