<h1>Combined Science</h1> <h2>Paper 2: Biology 2</h2>									
Foundation Tier									
Sample Assessment Materials for first teaching September 2016					Paper Reference				
Time: 1 hour 10 minutes					1SC0/2BF				
You must have: Calculator, ruler								Total Marks	

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with **your answer clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 60.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

Answer ALL questions. Write your answers in the spaces provided.

**Some questions must be answered with a cross in a box ☒.
If you change your mind about an answer, put a line through the box ~~☒~~ and then
mark your new answer with a cross ☒.**

- 1** Plants need light for photosynthesis.

Part of the photosynthesis equation is shown below.

- (a) Which of the following would complete the photosynthesis equation?

(1)

	reactant	product
<input type="checkbox"/> A	water	chlorophyll
<input type="checkbox"/> B	chlorophyll	oxygen
<input type="checkbox"/> C	water	oxygen
<input type="checkbox"/> D	oxygen	water

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

A scientist investigates the effect of light intensity on photosynthesis.

He sets up the equipment shown in Figure 1.

Figure 1

He positions the lamp 10 cm from the test tube and records the number of bubbles produced in five minutes.

He repeats the procedure with the lamp at a distance of 20 cm and 30 cm away from the test tube.

The scientist wants to repeat his investigation at each distance.

(b) (i) State **three** variables that should be kept constant to improve the results.

(3)

- 1
- 2
- 3

The scientist noticed that the temperature of water near the light increased.

- (ii) Give **one** improvement the scientist could make to reduce the effect of this increase in temperature.

(1)

- (c) Figure 2 shows the results of the investigation.

distance (cm)	number of bubbles counted			
	test 1	test 2	test 3	mean
10	42	37	44	41
20	23	24	22	
30	10	11	12	11

Figure 2

- (i) Calculate the mean result for a distance of 20 cm.

(1)

The number of bubbles counted for test 2 at 10 cm was anomalous.

- (ii) State how the scientist could deal with this anomaly.

(1)

(iii) Give a conclusion about the effect of light intensity on photosynthesis.

(1)

(Total for Question 1 = 8 marks)

2 Figure 3 shows a pair of human lungs.

Figure 3

(a) (i) Where does gas exchange take place in the lungs?

(1)

- A alveolus
- B bronchus
- C bronchiole
- D trachea

A person had emphysema. This reduces the number of alveoli in the lungs.

(ii) Explain how emphysema would affect the amount of oxygen carried in the bloodstream.

(b) Figure 4 is a table that shows the surface area (SA) to volume (V) ratio in three different sized cubes.

cube size (cm)	surface area / SA (cm ²)	volume / V (cm ³)	SA:V ratio
2	24	8	
4	96	64	1.5:1
6	216	216	1:1

Figure 4

(i) Calculate the SA:V ratio for the 2 cm cube.

(2)

(ii) Give **one** reason why it is important that human lungs have a high surface area to volume ratio.

(1)

Oxygen is involved with aerobic respiration in cells.

(iii) Which is the correct equation for aerobic respiration?

(1)

- A** oxygen + carbon dioxide → glucose + lactic acid
- B** carbon dioxide + water → oxygen + lactic acid
- C** glucose + oxygen → carbon dioxide + water
- D** glucose + water → carbon dioxide + oxygen

(Total for Question 2 = 7 marks)

3 Scientists can measure how much water is lost by the leaves of a plant.

(a) (i) What is the movement of water molecules from an area with a low solute concentration to an area with a high solute concentration called?

(1)

- A active transport
- B diffusion
- C osmosis
- D transpiration

(ii) What structure transports water through the stem of the plant?

(1)

- A guard cell
- B phloem
- C stomata
- D xylem

(b) A scientist measured the rate of water loss from a plant shoot using a potometer.

Figure 5 shows the equipment used in the experiment.

Figure 5

The volume of water lost from the plant can be calculated by measuring the distance a bubble moves along the capillary tubing.

- (i) Calculate the rate of water loss from the plant in mm^3/s if the volume of water lost was 12 mm^3 in 10 minutes.

(3)

rate of water loss = mm^3/s

(ii) Explain how the water loss would change if the plant only had one leaf. (2)

.....

.....

.....

.....

The scientist wants to extend the investigation by considering other factors that affect transpiration rate.

(iii) State **two** variables, other than temperature, that she could investigate. (2)

1

.....

.....

2

.....

.....

(c) Explain the effect of increasing air temperature on the rate of transpiration in a plant. (2)

.....

- 4 (a) A scientist wanted to estimate the number of earthworms in a field using a quadrat.

The scientist placed the quadrats at random on the surface of the area being sampled and then watered the area with a very dilute solution of mustard.

This causes the earthworms to come to the surface to be counted.

- (i) Give a reason why the quadrats were placed at random.

(1)

The skin of the earthworm acts as a gas exchange surface.

- (ii) Describe the gases that are exchanged across the skin of the earthworm as a result of the earthworm respiring.

(2)

- (iii) What is the method in which gases are exchanged across the skin of the earthworm?

(1)

- A active transport
- B diffusion
- C osmosis
- D transpiration

(b) A student wants to estimate the number of daisy plants in a 500 m² field.

She uses a 1 m² quadrat to sample the field.

Figure 6 shows the results for the number of daisy plants counted in six areas sampled with the quadrat.

sample number	number of daisy plants	mean diameter of daisy plants / cm
1	5	7
2	2	2
3	6	9
4	3	3
5	4	5
6	4	6

Figure 6

(i) Calculate the mean number of daisy plants for the six samples.

(1)

mean number of daisy plants =

(ii) Describe how the student could use this calculated mean to estimate the total number of daisy plants in this field.

(2)

.....

.....

.....

.....

Sample 2 was taken in an area where there were many overhanging trees.

(iii) Explain how these trees may have affected the distribution of daisy plants growing in this area.

(2)

(iv) Give **two** abiotic factors that could affect the distribution and size of daisies growing in this field.

- 6 (a) Blood tests can be used to check a person's blood glucose and hormone levels.

Figure 10 shows the results of two blood tests done on three people to check their blood glucose levels. Person 1 is healthy.

	blood glucose level (mmols/l)	
	after fasting for 12 hours	two hours after drinking 75 g glucose
person 1	5.4	6.4
person 2	5.6	9.0
person 3	7.8	12.1

Figure 10

- (i) Compare the glucose levels of person 1 with the glucose levels of person 2 after fasting for 12 hours.

(1)

- (ii) Compare the glucose levels of person 2 with the glucose levels of person 1, two hours after drinking 75 g glucose.

(1)

- (iii) Person 3 cannot produce the hormone that controls blood glucose levels.

State the hormone that person 3 cannot produce.
