

Please check the examination details below before entering your candidate information

Candidate surname					Other names				
Centre Number					Candidate Number				
Pearson Edexcel Level 1/Level 2 GCSE (9–1)									
Wednesday 12 June 2019									
Morning (Time: 1 hour 10 minutes)					Paper Reference 1SC0/2CH				
Combined Science Paper 5: Chemistry 2									
Higher Tier									
You must have: Calculator, ruler								Total Marks	

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must **show all your working out** with **your answer clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 60.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.
- A periodic table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1/

Pearson

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 Most of the fuels used today are obtained from crude oil.

(a) Which statement about crude oil is correct? (1)

- A crude oil is a compound of different hydrocarbons
- B crude oil is a mixture of hydrocarbons
- C crude oil contains different hydrocarbons, all with the same molecular formula
- D crude oil is an unlimited supply of hydrocarbons

(b) Crude oil is separated into several fractions by fractional distillation. Two of these fractions are kerosene and diesel oil.

(i) State a use for each of these fractions. (2)

kerosene.....

diesel oil.....

(ii) Figure 1 shows where the fractions kerosene and diesel oil are produced in the fractionating column.

Figure 1

Kerosene is obtained higher up the column than diesel oil.

Kerosene and diesel oil fractions have slightly different properties.

Choose a property.

State how this property for kerosene compares with the property for diesel oil. (1)

property

comparison

- (c) Figure 2 shows the formulae of a molecule of butane and of a molecule of pentane. Butane and pentane are neighbouring members of the same homologous series.

Figure 2

- (i) Explain, using these formulae, why butane and pentane are neighbouring members of the same homologous series.

(2)

.....

.....

.....

.....

- (ii) Butane has the formula C_4H_{10} .

Calculate the mass of carbon in 100 g of butane.

Give your answer to three significant figures.

(relative atomic masses: $\text{H} = 1.00$, $\text{C} = 12.0$;
relative formula mass: $\text{C}_4\text{H}_{10} = 58.0$)

You must show your working.

(3)

.....

.....

.....

mass of carbon = g

(Total for Question 1 = 9 marks)

- 2 (a) An aluminium atom has the atomic number 13 and the mass number 27.

Which row shows the numbers of subatomic particles present in an aluminium ion, Al^{3+} ?

(1)

	protons	neutrons	electrons
<input type="checkbox"/> A	13	14	13
<input type="checkbox"/> B	13	14	10
<input type="checkbox"/> C	14	13	10
<input type="checkbox"/> D	14	13	17

- (b) Magnesium burns in excess oxygen to form magnesium oxide.
The balanced equation for this reaction is

Starting with 1.35g of magnesium, calculate the maximum mass of magnesium oxide that could be formed in this reaction.
(relative atomic masses: O = 16.0, Mg = 24.0)

You must show your working.

(3)

.....

.....

.....

.....

.....

mass of magnesium oxide = g

- (c) Chlorine reacts with hydrogen to form hydrogen chloride.

Write the balanced equation for this reaction.

(3)

.....

.....

(d) Sodium reacts with chlorine to form sodium chloride.

The electronic configuration of the sodium atom is 2.8.1 and the electronic configuration of the chlorine atom is 2.8.7.

Give the electronic configurations of the ions formed.

(2)

Na⁺

Cl⁻

3 (a) Carbon dioxide is one of the gases in the Earth's atmosphere. The percentage of carbon dioxide in the Earth's atmosphere has changed over time.

(i) Which row of the table shows the approximate percentage of carbon dioxide thought to be in the Earth's early atmosphere and how this percentage changed to form the Earth's atmosphere today?

(1)

	approximate percentage of carbon dioxide in the Earth's early atmosphere	change in percentage carbon dioxide to form the Earth's atmosphere today.
<input type="checkbox"/> A	5	increased
<input type="checkbox"/> B	5	decreased
<input type="checkbox"/> C	95	increased
<input type="checkbox"/> D	95	decreased

(ii) The actual percentage of carbon dioxide in the Earth's atmosphere today varies.

Explain **two** factors that cause the percentage of carbon dioxide in today's atmosphere to vary.

(4)

factor 1.....

.....

.....

factor 2.....

.....

.....

.....

(b) Carbon dioxide is a simple molecular, covalent compound.

It has a low boiling point of -78.5°C .

Explain why carbon dioxide has a low boiling point.

(2)

.....

.....

.....

.....

(c) Calculate the number of molecules in 0.11 g of carbon dioxide.

Give your answer to two significant figures.

(relative formula mass : $\text{CO}_2 = 44$
Avogadro constant = 6.02×10^{23})

(3)

.....

.....

.....

.....

number of molecules =

(Total for Question 3 = 10 marks)

4 Some of the elements in the periodic table are metals.

(a) The electronic configuration of a metal is 2.8.3

Which row shows the group and period of the periodic table where this metal is found? (1)

	group	period
<input type="checkbox"/> A	2	3
<input type="checkbox"/> B	2	8
<input type="checkbox"/> C	3	2
<input type="checkbox"/> D	3	3

(b) Lithium, potassium and rubidium are alkali metals.

(i) Describe what you would see when a small piece of rubidium is dropped on to water. (2)

.....

.....

.....

.....

(ii) The electronic configuration of lithium is 2.1
The electronic configuration of potassium is 2.8.8.1
Lithium is less reactive than potassium.

Explain, in terms of their electronic configurations, why lithium is less reactive than potassium. (3)

(c) Lithium has two naturally occurring isotopes, lithium-6 and lithium-7.

A sample of lithium contains

7.59% of lithium-6

92.41% of lithium-7.

Calculate the relative atomic mass of lithium in this sample.

Give your answer to two decimal places.

You must show your working.

(4)

.....

.....

.....

.....

.....

.....

.....

relative atomic mass of lithium =

- 5 Calcium carbonate reacts with dilute hydrochloric acid to produce calcium chloride, water and carbon dioxide.

- (a) A student wanted to measure the amount of gas produced in two minutes.

The student suggested that this could be done by counting the number of bubbles formed.

However, the bubbles are produced too quickly to count them.

Figure 3 shows a conical flask in which the calcium carbonate and dilute hydrochloric acid are reacting.

Complete Figure 3 to show the apparatus that could be used to measure accurately the volume of gas given off in two minutes.

(2)

Figure 3

- (b) The reaction between calcium carbonate and dilute hydrochloric acid is exothermic.

Explain, in terms of bond breaking and bond making, why some reactions are exothermic.

6 Fluorine, chlorine, bromine, iodine and astatine are elements in group 7.

(a) Describe the test to show that a gas is chlorine.

(2)

.....

.....

.....

.....

(b) Bromine reacts with hydrogen to form hydrogen bromide.
Hydrogen bromide dissolves in water to form a solution.

State the name of the solution formed.

(1)

.....

(c) There is a trend in the colour and the state of the halogens at room temperature.

Predict the colour and state of astatine at room temperature.
