Tuesday 13 June 2023 – Morning

GCSE (9–1) Combined Science (Chemistry) A (Gateway Science)

J250/04 Paper 4 (Foundation Tier)

Time allowed: 1 hour 10 minutes

You must have:

- a ruler (cm/mm)
- the Data Sheet for GCSE (9–1) Combined Science (Chemistry) A (inside this document)

You can use:

- a scientific or graphical calculator
- an HB pencil

Please write clearly in black ink. **Do not write in the barcodes.**

Centre number

--	--	--	--	--

Candidate number

--	--	--	--

First name(s) _____

Last name _____

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer **all** the questions.
- Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.

INFORMATION

- The total mark for this paper is **60**.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has **24** pages.

ADVICE

- Read each question carefully before you start your answer.

2
Section A

You should spend a **maximum of 20 minutes** on this section.

Write your answer to each question in the box provided.

1 Which part of the Periodic Table contains the **most reactive** metals?

Your answer

[1]

2 Which process traps heat from the Sun in the Earth's atmosphere?

- A Combustion
- B Displacement
- C Greenhouse effect
- D Photosynthesis

Your answer

[1]

3

3 The list is part of the reactivity series of metals.

Calcium	most reactive
Magnesium	↕
Zinc	↕
Lead	least reactive

The diagram shows these four metals reacting with dilute hydrochloric acid.

Which test tube shows the reaction of calcium?

Your answer

[1]

4

4 What is the temperature of the dilute hydrochloric acid shown in the diagram?

- A 41 °C
- B 46 °C
- C 51 °C
- D 54 °C

Your answer

[1]

5

- 5 The Earth's atmosphere contains 78% nitrogen and 21% oxygen. The remaining 1% is listed in the table.

Gas	Percentage (%)
argon	0.94
carbon dioxide	
other gases	0.02
Total	1.00

What is the percentage of carbon dioxide in the Earth's atmosphere?

- A 0.01%
B 0.04%
C 0.06%
D 0.08%

Your answer

[1]

- 6 The table shows the boiling points of three Group 1 elements.

Element	Boiling point (°C)
caesium	669
potassium	760
rubidium	686

How many of these elements are gases at 700 °C?

- A 0
B 1
C 2
D 3

Your answer

[1]

6

7 The diagram shows the reaction profile for an **uncatalysed** reaction.

How does adding a catalyst to the reaction change the reaction profile?

- A X is larger
- B X is smaller
- C Y is larger
- D Y is smaller

Your answer

[1]

8 Which particles do atoms in Group 7 **gain** when they react?

- A Electrons
- B Ions
- C Neutrons
- D Protons

Your answer

[1]

7

- 9 Which reactions can be catalysed by an enzyme?
- A Combustion reactions
 - B Electrolysis of metal ores
 - C Reactions in biological systems
 - D Reactions of metals with acids

Your answer

[1]

- 10 The rate of reaction between magnesium and dilute hydrochloric acid depends on the concentration of the dilute hydrochloric acid.

Which concentration of dilute hydrochloric acid reacts **slowest** with magnesium?

- A 0.089 mol/dm^3
- B 0.500 mol/dm^3
- C 0.038 mol/dm^3
- D 0.630 mol/dm^3

Your answer

[1]

8

Section B

11 The table shows the equations for four different reactions.

Reaction	Equation
A	aluminium oxide \rightarrow aluminium + oxygen
B	potassium + bromine \rightarrow potassium bromide
C	copper sulfate + iron \rightarrow iron sulfate + copper
D	hydrogen + chlorine \rightleftharpoons hydrogen chloride

Match each statement with one of the reactions by writing **A**, **B**, **C** or **D** in the box.

You may use the letters once, more than once, or not at all.

(a) The reversible reaction.

[1]

(b) The reaction of a very reactive metal.

[1]

(c) The reaction of a green gas.

[1]

(d) The reaction where a more reactive metal displaces a less reactive metal.

[1]

(e) The reaction where a metal is extracted using electrolysis.

[1]

12 (a) Fig. 12.1 shows the separation of the chemicals found in crude oil.

Fig. 12.1

(i) What is the name of the process shown in Fig. 12.1?

..... [1]

(ii) Crude oil is heated and vaporised as it enters the column.

Describe what happens to the vapours as they rise up the column.

.....

 [2]

(iii) Which of the chemicals separated from crude oil has the **smallest** molecules?

Tick (✓) **one** box.

Gases

Naphtha

Residue

[1]

10

(b) Fig. 12.2 shows the structure of a molecule found in crude oil.

Fig. 12.2

(i) Which words describe the molecule?

Tick (✓) **two** boxes.

Alkane

Hydrocarbon

Mixture

Polymer

[2]

- (ii) There are other molecules similar to **Fig. 12.2** but with different numbers of carbon atoms.

Fig. 12.3 shows how the boiling point of these molecules changes with the number of carbon atoms in the molecule.

Fig. 12.3

Use the graph to estimate the boiling point of the molecule shown in **Fig. 12.2**.

Boiling point = °C [1]

- (c) 160 litres of crude oil contains 75 litres of petrol.

Calculate the percentage of petrol in the crude oil.

Give your answer to **2** significant figures.

Percentage of petrol = % [3]

13 Lithium, sodium and potassium are metals in Group 1 of the Periodic Table.

Table 13.1 shows the melting points of lithium, sodium and potassium.

Table 13.1

Metal	Melting point (°C)
lithium	181
sodium	98
potassium	63

(a) Complete the bar chart to show the melting point of sodium.

[1]

(b) State and explain which of the metals lithium, sodium or potassium is the softest. Use information from **Table 13.1**.

Metal

Reason

..... [2]

13

- (c) Lithium, sodium and potassium can be cut with a knife as shown in the diagram.

At first the freshly cut surface looks shiny, but then begins to go dull.

- (i) Complete **Table 13.2** by estimating the times for lithium and potassium surfaces to go dull.

Table 13.2

Metal	Time for freshly cut surface to go dull (s)
lithium
sodium	17
potassium

[1]

- (ii) Lithium, sodium and potassium are stored in oil to prevent them reacting with gases in the air.

Which gases in the air react with lithium, sodium and potassium?

Tick (✓) **two** boxes.

- | | |
|--------------|--------------------------|
| Argon | <input type="checkbox"/> |
| Nitrogen | <input type="checkbox"/> |
| Oxygen | <input type="checkbox"/> |
| Water vapour | <input type="checkbox"/> |

[2]

15

15 In industry, iron can be extracted from iron ore. Iron ore contains iron oxide, Fe_2O_3 .

(a) Iron is extracted from iron oxide by reduction.

The equation for one reaction is

(i) Complete the **balanced symbol** equation for the reaction. [2]

(ii) Why does this reaction happen?

Tick (✓) **one** box.

Carbon and iron have the same reactivity.

Carbon is more reactive than iron.

Iron is more reactive than carbon.

[1]

(iii) Explain how the equation shows that the iron oxide is reduced.

.....
 [1]

(iv) Which chemical reduces the iron oxide, Fe_2O_3 ?

Tick (✓) **one** box.

C

Fe

CO

[1]

(b) Iron can be recycled in 5 stages.

Stage 1 Different types of waste metals are put in a recycling bin.

Stage 2 These waste metals are collected.

Stage 3

Stage 4 The iron is compressed and shredded.

Stage 5 The iron is melted and formed into new products.

Describe what happens in **Stage 3**. Write your answer on the line next to **Stage 3**.

[1]

(c) In industry, iron is extracted from iron ore in a blast furnace.

The table shows information about the production of iron in a blast furnace and from recycling.

In a blast furnace	From recycling
1 tonne of iron ore makes 0.63 tonnes of iron	1 tonne of recycled iron makes 0.96 tonnes of iron
2×10^7 kJ of energy is needed to make 1.0 tonne of iron	5×10^6 kJ of energy is needed to make 1.0 tonne of iron

(i) Give **two** reasons why it is better to produce iron from recycling than in a blast furnace.

Use the information from the table.

1

.....

2

.....

[3]

(ii) Calculate the mass of iron made from 250 tonnes of iron ore in the blast furnace. Give your answer in kilograms.

(1 tonne = 1000 kg)

Mass of iron = kg [2]

17
BLANK PAGE

PLEASE DO NOT WRITE ON THIS PAGE

- 16 A student investigates the rate of reaction between magnesium and an **excess** of dilute hydrochloric acid.

The diagram shows the apparatus they use.

- (a) The student has difficulty filling the measuring cylinder with water.

They change the measuring cylinder for a different piece of apparatus which allows them to measure the volume of hydrogen more accurately.

Name the piece of apparatus they use and complete the diagram below to show this apparatus.

Name of piece of apparatus

[3]

- (b) Complete the **balanced symbol** equation for the reaction.

[2]

- (c) The student records the results of the experiment every 30 seconds. The graph shows the student's results.

Write the correct label, including the units, for the y-axis on the graph.

[2]

.....
.....
.....

- (d) The student repeats the experiment. The only difference is they use a **higher** concentration of acid.

Draw a line on the graph to show the results of this experiment.

[2]

- (e) If the experiment is repeated at a **higher** temperature, the rate of reaction increases.

Explain why. Use ideas about particles and collisions.

.....
.....
.....
.....
.....
.....
..... [3]

END OF QUESTION PAPER

ADDITIONAL ANSWER SPACE

If additional space is required, you should use the following lined page(s). The question number(s) must be clearly shown in the margin(s).

A large area of lined paper for writing answers. It features a vertical margin line on the left side and horizontal dotted lines for writing. The lines are evenly spaced and extend across the width of the page.

The image shows a blank sheet of white paper with horizontal dashed lines for writing. A solid vertical line runs down the left side of the page, creating a narrow margin. The lines are evenly spaced and extend across the width of the page.

A large rectangular area consisting of a solid vertical line on the left side and approximately 30 horizontal dotted lines extending across the page, providing a template for writing.
