

**GCSE**

**Additional Science B**

Unit **B722/01**: Modules B4, C4, P4 (Foundation Tier)

General Certificate of Secondary Education

**Mark Scheme for June 2015**

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2015

Annotations used in scoris

Annotation	Meaning
	correct response
	incorrect response
<b>BOD</b>	benefit of the doubt
<b>NBOD</b>	benefit of the doubt <b>not</b> given
<b>ECF</b>	error carried forward
	information omitted
<b>I</b>	ignore
<b>R</b>	reject
<b>CON</b>	contradiction

Abbreviations, annotations and conventions used in the detailed Mark Scheme.

- / = alternative and acceptable answers for the same marking point
- (1)** = separates marking points
- allow** = answers that can be accepted
- not** = answers which are not worthy of credit
- reject** = answers which are not worthy of credit
- ignore** = statements which are irrelevant
- ( ) = words which are not essential to gain credit
- = underlined words must be present in answer to score a mark (although not correctly spelt unless otherwise stated)
- ecf = error carried forward
- AW = alternative wording
- ora = or reverse argument

Question	Answer	Marks	Guidance										
1 a	(carbon dioxide +) <b>water</b> (1) → (glucose +) <b>oxygen</b> (1)	2	<b>allow</b> correct formulae / mix of formulae and words										
b	<table border="1"> <tr> <td data-bbox="331 320 992 419">Temperatures would be too low for photosynthesis.</td> <td data-bbox="992 320 1088 419">✓(1)</td> </tr> <tr> <td data-bbox="331 419 992 488">It is never light in the Antarctic.</td> <td data-bbox="992 419 1088 488"></td> </tr> <tr> <td data-bbox="331 488 992 557">Water would leave the bacteria by osmosis.</td> <td data-bbox="992 488 1088 557">✓(1)</td> </tr> <tr> <td data-bbox="331 557 992 625">There is no carbon dioxide in the Antarctic.</td> <td data-bbox="992 557 1088 625"></td> </tr> <tr> <td data-bbox="331 625 992 694">The salt would enter the bacteria by osmosis.</td> <td data-bbox="992 625 1088 694"></td> </tr> </table>	Temperatures would be too low for photosynthesis.	✓(1)	It is never light in the Antarctic.		Water would leave the bacteria by osmosis.	✓(1)	There is no carbon dioxide in the Antarctic.		The salt would enter the bacteria by osmosis.		2	<b>if more than 2 ticks, deduct a mark for each extra tick</b>
Temperatures would be too low for photosynthesis.	✓(1)												
It is never light in the Antarctic.													
Water would leave the bacteria by osmosis.	✓(1)												
There is no carbon dioxide in the Antarctic.													
The salt would enter the bacteria by osmosis.
