Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners’ meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2016 series for most Cambridge IGCSE®, Cambridge International A and AS Level components and some Cambridge O Level components.
Mark scheme abbreviations

; separates marking points
/ alternative answers for the same point
R reject
A accept (for answers correctly cued by the question, or by extra guidance)
R reject
A accept (for answers correctly cued by the question, or by extra guidance)
AW alternative wording (where responses vary more than usual)
underline actual word given must be used by candidate (grammatical variants accepted)
max indicates the maximum number of marks that can be given
ora or reverse argument
mp marking point (with relevant number)
ecf error carried forward
I ignore
AVP alternative valid point
1 (a) A activation energy / energy of activation;
   B induced fit; A induced fit, model/hypothesis/theory/mechanism
   C globular;
   D extracellular;
   E Michaelis-Menten constant; A $K_m$

[Total: 5]

2 (a) (i) curled/rolled, leaf; R curly/curved/folded or trichomes/hairs; A hair/hairy-like structures R cilia/spines/needles

(ii) allow explanations for stomata in pits, thick cuticle and no stomata on outer surface as ecf from (i)

   curled leaf/trichomes/stomata in pits ref. to (creates) still/non-moving, air;
   (in enclosed area) humid/moist; AW, e.g. traps water vapour/maintains humidity
   water potential gradient less steep or decreased rate of diffusion of water vapour (out);
   A (water) vapour pressure gradient for water potential gradient
   I decreased concentration gradient of water vapour
   assume in context of between substomatal air space and enclosed area unless stated otherwise

   thick cuticle
greater layer impermeable wax/AW; A thicker waterproof layer increases distance for diffusion;
of water vapour;

   no stomata on outer surface
   most water lost via (open) stomata;
cuticular transpiration only;
   ref. to where most exposure to, light/air currents/wind;

   [max 2]

(b) xerophytic / xerophyte;

[Total: 4]
3 (a) (i) 1179 ;;

one mark if not to the whole person e.g. 1179.24/1179.2 or
if calculation correct but answer incorrect
e.g. 1.39 \times 848.38 or 1.39 \times (84838\,000/100\,000) or
if no calculation to check but answer given as 1180

(ii) 1 provides information about AW, proportion/percentage, (of population) affected/AW;
2 to, make (valid) comparisons/compare; between countries/in one country over time
3 provides information about severity of disease; AW
4 population size, taken into account/different for different countries/changes over time in a country;
do not need ‘size’ if ‘use of ‘population’ is in correct context
5 idea that countries with larger populations will usually have more cases/higher number of cases may just mean larger population of country;
6 AVP; gives guidance about whether the disease is, spreading/becoming an epidemic/dying out (in one country) in context of over time
idea that number of cases per 100\,000 are, standardised/normalised, values
7 use of data to support; only two of Chad, Eritrea or Ethiopia where comparisons between countries stated I ref. to other countries

(2009) actual cases and standardised cases

comparison (2009) to support mp 5 population size and actual cases

stated values of similar number of cases per 100\,000 and populations of different sizes

countries compared, number of cases per 100\,000 for any stated year, with comment about severity

number of cases per 100\,000 for one country over time, with comment about severity/spreading/dying out/control/AW [max 3]
(b) can give values of percentage vaccinated to describe 'increasing/decreasing' percentage vaccination

**support**

1. Gambia high percentage vaccinated (throughout) and low number of cases;

   A. Eritrea

2. data to support; e.g. a percentage vaccination for a year and number of cases (same, or following, year after vaccination) or a range given for percentage vaccinations over the whole, or stated, number of years or a compilation of the two

**partial/weak, support**

3. Central African Republic decreasing vaccination and number of cases in 2011, higher / 15.31 ;

4. Chad (from 2008) increasing percentage vaccination and, low / stated, number of cases, 2009/2010/2012 ;

   1.45 1.66 0.96

**do not support**

5. Niger / Ethiopia / Chad, (generally) increasing percentage vaccinated and number of cases, fluctuates / increase and decrease (ora) / AW ;

   A. stated correct data to show increase and decrease
   A. for Chad if mp 4 given and ref. to increase / 71.6 in 2011

6. (generally) increasing percentage vaccinated and number of cases, increases / goes from 2.34–4.67, in 2011 in Niger or increases / goes from 1.39–4.86, in 2010 in Ethiopia or increases / goes from 1.66–71.6, in 2011 in Chad A 1.45–1.66 in 2010 ;

7. Central African Republic decreasing vaccination and low number of cases in, 2009/2010/2012 ;

8/9 AVP ;; e.g.

- *idea that* most values for number of cases are low irrespective of vaccination percentage

- *ref.to* needs, high / 90%, vaccination to be effective
  A. < 80% / low, vaccination ineffective

- *idea that* generally Gambia / Eritrea, have higher percentage vaccinated and have lower number of cases than, (three of) Ethiopia, Chad, Central African Republic, Niger / the other countries

- *ref. to* Chad / Central African Republic, in 2011 and, epidemics / inability to keep number of cases down / ineffectiveness of vaccination programme I *ref. to* 71.6 (Chad) or 15.31 (Central African Republic)

- Eritrea 2012 high vaccination but, increase in / 3.16, cases

- *ref. to* increasing percentage of vaccination in Niger and decrease in cases, 2009–2010 from 5.23 to 2.34 / 2011–2012 from 4.67–1.59

   A. 2009–2012 from 5.23 to 1.59 [max 4]
(c) points refer to smallpox, look for points written as ora
any two from
1 high, percentage/proportion, immunised/vaccinated; AW
A mass vaccination
2 no boosters required/one dose enough/immunity very long-lived;
A idea of long-lasting effect of vaccine
3 same, vaccine/antigens, used (throughout);
treat as neutral ref. to, low mutation rate/stability, of smallpox virus
4 heat stable/thermostable/ freeze-dried/lyophilised, vaccine; I frozen
A no need to refrigerate/AW
A idea of longer shelf-life
5 ease of, administering vaccine/training people to give vaccine;
6 ring vaccination/described, e.g. contact tracing;
7 easy to identify infected people/AW, (to begin ring vaccination);
8 lower percentage cover required for smallpox than measles/lower herd
immunity required;
9 AVP; smallpox less infectious (so lower percentage cover required)
idea of less, civil unrest/war/movement of populations (so easier to
implement)
suggestion that smallpox live vaccine (and measles not live) [max 2]

(d) active artificial/artificial active; treat as neutral acquired [1]

(e) can be from point of view of country programme or WHO programme cost
1 preparing/manufacturing/purchasing, vaccine; A cost to provide vaccine
free to developing countries
2 disposables/equipment to administer (vaccine);
e.g. syringes/needles/(protective) gloves
3 storage; e.g. space, security
4 refrigeration/maintaining cold chain;
5 transport (of, vaccine/health care workers);
6 wages/training, of staff involved; e.g. wages for, health care workers
administering vaccine/staff involved in training health care workers
7 record keeping/contact tracing;
8 advertising/informing/marketing/education;
9 research/development;
10 setting up vaccination/immunisation, camps (for remote/epidemic, areas);
I building, hospitals/clinics [max 2]

[Total: 14]
4  (a) blood contained in (blood) vessels AW
    or
    blood contained in any three of
    heart, arteries, veins, capillaries;
    systemic and pulmonary, systems/circulation; A 'systematic'
    A described if circulations not named
    e.g. for each complete circuit (round the body) passes through heart twice
    from heart to lungs and back, then to (rest of) body and back [2]

(b) W = aorta/aortic arch;
    X = pulmonary vein;
    Y = right atrioventricular/tricuspid, (valve);
    Z = left, atrium/auricle; [4]

(c) red blood cells; A rbc
    A platelets
    A plasma proteins/named [1]

(d) 1 idea of carbon dioxide out (of blood to alveolus) and oxygen in (to alveolus
    from blood);
    2 diffusion/diffuses
    or
    (movement from) high concentration to low concentration/down a
    concentration gradient; A diffusion/pressure, gradient
    3 (across) squamous epithelium/squamous cells (of alveolar wall);
       A pavement cells
    4 (and) endothelium/endothelial cells (of capillary wall);
       A squamous cells but must be clear that this is for capillary wall
    5 oxygen, into / AW, red blood cells; I oxygen binds to Hb
    6 steep gradient maintained by, ventilation/uptake by haemoglobin/blood
       carries oxygen away/blood arrives with carbon dioxide/deoxygenated
       blood arriving low in oxygen [max 4]

(e) (i) F = nucleolus; A nucleus
    G = cell surface/plasma, membrane; [2]
(ii) transport / transporter / carrier, protein; \( R \) pump protein

specific protein;
glucose, binding site / AW; I glucose binds \( R \) glucose receptor

specific binding site (in protein) = 2 marks

(glucose binding causes) conformational change; AW, e.g. changes shape

passive / no energy required / no ATP required;

movement is, down the concentration gradient / from high to low concentration; must be in context of through the membrane protein [max 3]

[Total: 16]

5 (a) (i) coiling / supercoiling / condenses / condensation;

\( A \) become shorter and thicker \( R \) contracts [1]

(ii) accept from labelled diagram

two chromatids;

identical / sister, chromatids;

joined by a centromere; \( A \) kinetochore

one from

(reach chromatid) DNA complexed with protein

histone proteins / histones

telomeres at end of chromatids ;

[max 3]

(b) metaphase versus anaphase

idea of single chromosome of two chromatids versus two separated chromatids / daughter chromosomes

e.g. two chromatids versus, one chromatid / one daughter chromosome;
sister chromatids joined at centromere versus chromatids separated distance between sister chromatids zero versus increasing distance between chromatids

share a centromere versus do not share a centromere / centromere divides

two DNA molecules versus one DNA molecule;

at, equator / metaphase plate versus towards / at, poles; \( R \) centre \( R \) ends

linear / straight versus V shape / AW; [max 2]
(c) acts at target cell;

- binds to receptor;  
  R receptor cells *allow ecf for other mps*
  R trapped/captured
- ref. specificity;  
  A receptor complementary (shape) for cytokinin
  A cytokinin fits into receptor *this is also mp2*
  A recognition of cytokinin by receptor

- receptor (located) in, cell surface/plasma, membrane;  
  A cell membrane A phospholipid bilayer A transmembrane receptor

- sets off/AW, response in the cell/described response(s); e.g.
  triggers secondary messenger
  activates enzyme(s)
  I signals/causes/stimulates, cell to divide/cytokinesis

(acts) extracellularly/extracellular signal or (acts) intracellularly/intracellular signal; *must be in context of candidate’s answer*  

[Total: 9]

6 (a) (i)

![Chemical structures](https://example.com/structures.png)

- two marks for correct drawing of ring structure;  
  *all atoms shown or one of diagrams 1–3 above*

- one mark if, inconsistent/incomplete, drawing:
  diagram 1 – *one missing H from any of carbons 2–6 (OH groups and rest of drawing must be correct)*
  diagrams 2 and 3 – adding the H to *one of carbons 1–5 (OH groups and rest of drawing must be correct)*  

(ii) glycosidic; A glucosidic  

(iii) to form/has, (glycosidic α) 1–6, bonds/links (to make branches);  

*ref. to different shaped/specific/complementary, active site required to form bonds (for branching)*  

[Total: 9]
(b) (i) treat as neutral unit of inheritance
sequence of, nucleotides/bases;
section/length/part, of DNA (molecule);
codes for a polypeptide; A protein for polypeptide A enzyme
A information to produce a polypeptide
A codes/information, for sequence of amino acids/primary structure (of
a, polypeptide/protein)
R genetic code for a polypeptide

(ii) 1 (in DNA/gene) altered, sequence/AW, of, nucleotides/bases;
I DNA sequence
2 base substitution
or base/nucleotide, replaces another, base/nucleotide;
A example must be in context of, DNA/gene
3 (mRNA synthesised) during transcription;
4 (mutation leads to) altered/AW, mRNA/messenger RNA;
5 (only) one (mRNA) codon changed/a different codon;
A one DNA, triplet/codon, changed I ref. to codons changed
6 tRNA, with/has, a different anticodon;
7 (tRNA) brings, a different/a changed/the incorrect, amino acid, during
transl...
