## GCE A LEVEL MARKING SCHEME

AUTUMN 2020

A LEVEL
BIOLOGY - COMPONENT 2
A400U20-1

## INTRODUCTION

This marking scheme was used by WJEC for the 2020 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

## GCE A LEVEL BIOLOGY COMPONENT 2

## CONTINUITY OF LIFE

## AUTUMN 2020 MARK SCHEME

## GENERAL INSTRUCTIONS

## Recording of marks

Examiners must mark in red ink.
One tick must equate to one mark (apart from the questions where a level of response mark scheme is applied).
Question totals should be written in the box at the end of the question.
Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

## Marking rules

All work should be seen to have been marked.
Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.
Crossed out responses not replaced should be marked.
Credit will be given for correct and relevant alternative responses which are not recorded in the mark scheme.

## Extended response question

A level of response mark scheme is used. Before applying the mark scheme please read through the whole answer from start to finish. Firstly, decide which level descriptor matches best with the candidate's response: remember that you should be considering the overall quality of the response. Then decide which mark to award within the level. Award the higher mark in the level if there is a good match with both the content statements and the communication statement. Award the middle mark in the level if most of the content statements are given and the communication statement is partially met. Award the lower mark if only the content statements are matched.

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

| cao | $=$ correct answer only |
| :--- | :--- | :--- |
| ecf | $=$ error carried forward |
| bod | $=\quad$ benefit of doubt |

| Question |  |  | Marking details | Marks Available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 1 | (a) | (i) |  | phenotype (1) | 1 |  |  | 1 |  |  |
|  |  | (ii) | two organisms of the same phenotype only produce offspring of the same phenotype when bred together / homozygous (1) | 1 |  |  | 1 |  |  |
|  |  | (iii) | dominant alleles \{only need one allele to be/ always\} expressed in the phenotype (1) <br> recessive alleles need both alleles in the pair to be recessive to be expressed in the phenotype/ only expressed when dominant is absent (1) | 2 |  |  | 2 |  |  |
|  | (b) | (i) | stamens / anthers (removed) (1) <br> pollen has to come from another \{flower / plant\}/ no pollen available from same flower/ impossible to self-pollinate (1) | 1 | 1 |  | 2 |  | 1 |
|  |  | (ii) | \{enclose/ isolate\} the flower (in a bag) to prevent transfer of pollen from another flower (1) |  |  | 1 | 1 |  | 1 |
|  | (c) | (i) |   <br> smooth yellow $=9.4$ <br> smooth green $=3.2$ <br> wrinkled yellow $=3.1$ <br> wrinkled green $=1.0$ <br> All $\checkmark=2 ; 3$ or $2 \checkmark$ $=1 ; 1$ or $0 \checkmark=0$ <br> $9: 3: 3: 1=1$ mark  |  | 2 |  | 2 | 2 |  |
|  |  | (ii) | Any two (x1) from <br> $\mathrm{F}_{1}$ all smooth, yellow therefore smooth and yellow dominant, wrinkled and green recessive (1) Accept use of correct letters both $F_{1}$ must have been heterozygous for each characteristic (1) no linkage (1) Accept use of correct letters |  |  | 2 | 2 |  |  |

| Question |  |  | Marks Available |  |  |  |  |  |  |
| :---: | :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | (d) | (i) | linkage / on same chromosome (1) | AO1 | AO2 | AO3 | Total | Maths | Prac |
|  | (ii) | crossing over / chiasmata formation/ recombination of alleles (1) <br> during prophase I (1) <br> ignore reference to independent assortment unless incorrect | 2 | 1 |  | 1 |  |  |  |
|  |  | Question 1 total | 7 | 4 | 3 | 14 | 2 | 2 |  |

| Question |  |  | Marking details | Marks Available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 2 | (a) | (i) |  | advantage: <br> can see structures more clearly / that would not otherwise be visible/ provides contrast (1) <br> disadvantage: <br> organisms are (usually) \{killed/ harmed\} in the staining process/ stain is toxic (1) |  | 1 <br> 1 |  | 2 |  | 2 |
|  |  | (ii) | x $4 / \times 10 /$ low power (1) |  |  | 1 | 1 |  | 1 |
|  | (b) | (i) | body cells: mitosis + <br> gametes: <br> meiosis  | 1 |  |  | 1 |  |  |
|  |  | (ii) | 10 (mitotic) divisions |  | 1 |  | 1 |  |  |
|  | (c) |  | Any 2 (x1) from: <br> Each strand acts as a template (1) <br> So each time DNA is replicated the molecule contains one original and one new strand (1) <br> Suitable example from generation 0 to 1 or 1 to 2 (1) <br> e.g. generation 1 all DNA is intermediate in mass/ must contain one strand of ${ }^{14} \mathrm{~N}$ DNA and 1 strand of ${ }^{15} \mathrm{~N}$ DNA <br> generation 2 half of the DNA is intermediate and half is light <br> Accept arguments against conservative would always have 15 N band at bottom (1) dispersive a single broad band at 1 and 2 but getting lighter in mass (1) | 1 | 1 |  | 2 |  |  |

| Question |  | Marking details | Marks Available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| (d) | (i) |  | proto-oncogenes / oncogenes (1) mutagens/ carcinogens (1) | 2 |  |  | 2 |  |  |
|  | (ii) | body cells are fully differentiated germ line cells are not (1) Only germ line cells can continue to divide by mitosis (1) Reject reference to meiosis of germ-line cells |  |  | 2 | 2 |  |  |
| (e) |  | modification does not affect the base sequence of the gene (1) transcription is \{affected / reduced\}/ gene not expressed (1) translation produces same amino acid sequence (1) |  | 3 |  | 3 |  |  |
|  |  | Question 2 total | 4 | 7 | 3 | 14 | 0 | 3 |

| Question |  |  | Marking details | Marks Available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 3 | (a) |  |  | ovary wall 56 <br> pollen tube nucleus 28 <br> primary endosperm nucleus 84 <br> All $\checkmark=2 ; 2$ or $1 \checkmark=1 ; 1$ or $0 \checkmark=0$  <br> Allow 1 mark for $2 n, n, 3 n(1)$  |  | 2 |  | 2 |  |  |
|  | (b) | (i) | large quantity of DNA/ more DNA easier to see |  |  | 1 | 1 |  | 1 |
|  |  | (ii) | DNA too large a molecule to fit through normal filter paper pores/ allows more \{DNA/ filtrate\} to pass through (1) |  |  | 1 | 1 |  | 1 |
|  |  | (iii) | pH is 9 / alkaline + due to detergent (1) pepsin has optimum pH of 1 to $2 /$ acid (1) ORA Allow for 1 mark: pepsin not at optimal conditions (1) |  | 2 |  | 2 |  | 2 |
|  | (c) |  | PCR (1) <br> Any two ( $\times 1$ ) from: <br> heating the DNA to $95^{\circ} \mathrm{C}$ to separate the two strands of DNA (1) cooled to $50-60^{\circ} \mathrm{C}+$ to allow primers to \{bind / anneal\} to DNA (1) Heating to $70^{\circ} \mathrm{C}+$ allow \{thermally stable DNA polymerase /Taq polymerase\} to add (complementary) nucleotides (1) | 3 |  |  | 3 |  | 3 |
|  | (d) | (i) | Mutation / allele for beta thalassaemia still present in germ-line cells / sperm / individual would still be a carrier (1) somatic stem cell therapy not germ-line therapy / does not replace germ line cells / treats symptoms not heritable (1) |  |  | 2 | 2 |  |  |
|  |  | (ii) | the child has no choice / lack of consent/ suitable ethical concern (1) NOT unethical unjustified |  |  | 1 | 1 |  |  |

| Question |  |  | Marks Available |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
|  | (e) | advantage: <br> a virus would transfer the gene directly into the \{blood/ host\} stem cells <br> (1) <br> disadvantage: <br> non-pathogenic virus could mutate and become \{pathogenic/ cause <br> harm\} <br> insertion of gene could activate oncogene / <br> insertion of gene into another gene could inactivate that gene OWTTE/ <br> immune response (1) | AO2 | AO3 | Total | Maths | Prac |

| Question |  |  |  | Marking details | Marks Available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 4 | (a) | (i) | $\begin{aligned} & \hline \text { I } \\ & \text { II } \\ & \text { III } \end{aligned}$ |  | Y (endosperm) (1) <br> $\mathbf{Z}$ (embryo) (1) <br> $\mathbf{X}$ (aleurone layer) (1) |  | 3 |  | 3 |  |  |
|  |  | (ii) |  | \{layer X / aleurone layer\} removed which contains protein (1) (dietary) protein needed for growth (1) | 1 | 1 |  | 2 |  |  |
|  | (b) |  |  | restriction \{endonuclease / enzyme\} + to cut the gene out of DNA (1) <br> DNA ligase + to bind the fragment containing the gene into a plasmid (1) <br> Reject just cut or bind DNA <br> Allow 1 mark <br> Both enzymes correct but no/incorrect functions (1) | 2 |  |  | 2 |  | 2 |
|  | (c) | (i) |  | a region of non-coding DNA (between coding regions) (1) | 1 |  |  | 1 |  |  |
|  |  | (ii) |  | mRNA can be modified/ spliced in different ways/ exons can also be removed during splicing (1) <br> each mRNA would \{have a different base sequence/ code for a different polypeptide\} (1) |  | 1 <br> 1 |  | 2 |  |  |
|  |  | (iii) |  | (functional) mRNA does not contain introns / introns have already been spliced out of mRNA / synthetic DNA would only contain \{exons / coding regions\} (1) <br> only a single DNA sequence is incorporated into the rice cells (1) no risk of producing \{different mRNA / amino acid\} sequences (1) bacteria cannot remove introns / introns won't have to be spliced out (1) |  | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | 1 | 3 |  |  |
