[9]

M1.		• •	t <u>er</u> rate of up <i>(all</i> ow)	of oxygen consumption / leads to <u>greater</u> rate of respiration and take; / this mark even if spread through account but e and effect must be within the correct context)	
		respi <i>(ignc</i>	iration production production production production production production production production production prod	for respiration; ces ATP / releases energy; <i>ducing or making energy)</i> iken up by active transport / against concentration gradient;	4
	(b)	(i)	0.25 (mol o	dm-³);	1
		(ii)	1 mark 2 marks	Incorrect answer but derived from ratio of 1.2 and initial length of 90 mm Correct answer of 108 mm;	2
		(iii)		ntial inside potato higher / less negative than in solution; es out by osmosis;	2

M2. General principles for marking the Essay:

Four skill areas will be marked: scientific content, breadth of knowledge, relevance and quality of language. The following descriptors will form a basis for marking.

Category	Mark	Descriptor
	16	
Good	14	Most of the material of a high standard reflecting a comprehensive understanding of the principles nvolved and a knowledge of factual detail fully in keeping with a programme of A-level study. Some material, however, may be a little superficial. Material s accurate and free from fundamental errors but there may be minor errors which detract from the overall accuracy.
	12	

Scientific content (maximum 16 marks)

	10	
Average	8	A significant amount of the content is of an appropriate depth, reflecting the depth of treatment expected from a programme of A-level study. Generally accurate with few, if any fundamental errors. Shows a sound understanding of most of the principles involved.
	6	
	4	
Poor	2	Material presented is largely superficial and fails to reflect the depth of treatment expected from a programme of A-level study. If greater depth of knowledge is demonstrated, then there are many fundamental errors.
	0	

Topics

- 3.1.3 Lipids
- 3.1.5 Nucleic acids are important information-carrying molecules
- 3.1.6 ATP
- 3.2.3 Transport across cell membranes
- 3.5.1 Photosynthesis
- 3.5.2 Respiration
- 3.5.4 Nutrient cycles
- 3.6.2 Nervous coordination

Breadth of Knowledge (maximum 3 marks)

Mark	Descriptor
3	A balanced account making reference to most if not all areas that might realistically be covered on an A-level course of study.
2	A number of aspects covered but a lack of balance. Some topics essential to an understanding at this level not covered.
1	Unbalanced account with all or almost all material based on a single aspect
0	Material entirely irrelevant.

Relevance (maximum 3 marks)

Mark	Descriptor
3	All material presented is clearly relevant to the title. Allowance
	should be made for judicious use of introductory material
	Material generally selected in support of title but some of the main content of the essay is of only marginal relevance.
1	Some attempt made to relate material to the title but considerable amounts largely irrelevant.
0	Material entirely irrelevant or too limited in quantity to judge.

Quality of language (maximum 3 marks)

Mark	Descriptor
3	Material is logically presented in clear, scientific English. Technical terminology has been used effectively and accurately throughout.
2	Account is logical and generally presented in clear, scientific English. Technical terminology has been used effectively and is usually accurate.
1	The essay is generally poorly constructed and often fails to use an appropriate scientific style and terminology to express ideas.
0	Material entirely irrelevant or too limited in quantity to judge.

Additional notes on marking

Care must be taken in using these notes. It is important to appreciate that the only criteria to be used in awarding marks to a particular essay are those corresponding to the appropriate descriptors. Candidates may gain credit for any information providing that it is biologically accurate, relevant and of a depth in keeping with an A-level course of study. Material used in the essay does not have to be taken from the specification, although it is likely that it will be. These notes must therefore be seen merely as guidelines providing an indication of areas of the specification from which suitable factual material might be drawn.

In determining the mark awarded for breadth, content should ideally be drawn from each of the areas specified if maximum credit is to be awarded. Where the content is drawn from two areas, two marks should be awarded and where it is taken only from a single area, one mark should be awarded. However, this should only serve as a guide. This list is not exhaustive and examiners should be prepared to offer credit for the incorporation of relevant material from other areas of study. [25]
