For this paper you must have:
- a ruler.
You may use a calculator.

Time allowed
- 1 hour

Instructions
- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 60.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.
- Question 9(a) should be answered in continuous prose.
  In this question you will be marked on your ability to:
  – use good English
  – organise information clearly
  – use specialist vocabulary where appropriate.

Advice
- In all calculations, show clearly how you work out your answer.
1 The picture shows a basilisk lizard. Some of the adaptations of the lizard are labelled.

Basilisk lizards are often found resting on branches of trees that grow next to water. Basilisk lizards can run across the surface of the water.

1 (a) Draw one line from each adaptation of the lizard to the advantage of the adaptation.

<table>
<thead>
<tr>
<th>Adaptation</th>
<th>Advantage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Toes on the back feet are webbed</td>
<td>Helps the lizard to balance when running</td>
</tr>
<tr>
<td>Long tail</td>
<td>Warning colours to deter predators</td>
</tr>
<tr>
<td>Brown skin</td>
<td>Increases surface area in contact with the water</td>
</tr>
</tbody>
</table>

(3 marks)
1 (b) Suggest one advantage to the basilisk lizard of being able to run across the surface of the water.

............................................................................................................................................

(1 mark)

1 (c) Animals, such as lizards, compete with each other.

Give two factors that animals compete for.

Tick (✓) two boxes.

- Oxygen

- Food

- Territory

- Light

(2 marks)
2 The body controls internal conditions.

2 (a) Use words from the box to complete the sentences about water loss from the body.

| kidneys | liver | lungs | skin |

2 (a) (i) Water is lost in sweat via the .................................................. . (1 mark)

2 (a) (ii) Water is lost in urine via the .................................................. . (1 mark)

2 (a) (iii) Water is lost in the breath via the .................................................. . (1 mark)

2 (b) Students investigated body temperature in the class.

The bar chart shows the results.
2 (b) (i) One student used the bar chart to calculate the mean body temperature of the class. The student calculated the mean body temperature as 37.0 °C.

How did the student use the bar chart to calculate the mean?

............................................................................................................................................
............................................................................................................................................
............................................................................................................................................
............................................................................................................................................

(2 marks)

2 (b) (ii) How many students had a body temperature higher than the mean of 37.0 °C?

............................................................................................................................................

(1 mark)

2 (b) (iii) Body temperature must be kept within a narrow range.

Why?

............................................................................................................................................

(1 mark)

3 Viruses and bacteria cause diseases in humans.

3 (a) Draw a ring around the correct word to complete the sentence.

Organisms that cause disease are called

- algae.
- pathogens.
- vaccines.  

(1 mark)

3 (b) In August 2011 the United Nations gave a warning that there was a new strain of the bird flu virus in China.

Bird flu may kill humans. The new strain of the bird flu virus could cause a pandemic very quickly.

3 (b) (i) What is a pandemic?

Tick (✓) one box.

- A disease affecting the people all over one country.  
- A disease affecting hundreds of people.  
- A disease affecting people in many countries.  

(1 mark)

3 (b) (ii) The swine flu virus is carried by pigs.

The bird flu virus is likely to spread much more quickly than the swine flu virus.

Suggest one reason why.

............................................................................................................................................
............................................................................................................................................  

(1 mark)
3 (c) This notice is from a doctor’s surgery.

Unfortunately, antibiotics will NOT get rid of your flu.

3 (c) (i) Why will antibiotics not get rid of flu?

............................................................................................................................................

............................................................................................................................................

(1 mark)

3 (c) (ii) The symptoms of flu include a sore throat and aching muscles. What would a doctor give to a patient to relieve the symptoms of flu?

............................................................................................................................................

(1 mark)

3 (c) (iii) It is important that antibiotics are not overused. Explain why.

Use words from the box to complete the sentence.

| antibody | bacteria | immune | resistant | viruses |

Overuse of antibiotics might speed up the development of ............................................................. strains of ............................................................. .

(2 marks)
4 Students tested eight different foods, A – H, for carbohydrate, fat and protein.

The table shows the students’ results.

<table>
<thead>
<tr>
<th>Food</th>
<th>Carbohydrate</th>
<th>Fat</th>
<th>Protein</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>×</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>B</td>
<td>×</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>C</td>
<td>✓</td>
<td>✓</td>
<td>✓</td>
</tr>
<tr>
<td>D</td>
<td>✓</td>
<td>×</td>
<td>✓</td>
</tr>
<tr>
<td>E</td>
<td>×</td>
<td>×</td>
<td>×</td>
</tr>
<tr>
<td>F</td>
<td>✓</td>
<td>×</td>
<td>×</td>
</tr>
<tr>
<td>G</td>
<td>✓</td>
<td>×</td>
<td>×</td>
</tr>
<tr>
<td>H</td>
<td>✓</td>
<td>×</td>
<td>✓</td>
</tr>
</tbody>
</table>

**Key**

✓ = present
× = not present

4 (a) (i) How many of the foods contained **only** carbohydrate?

...........................................................................................................................................

(1 mark)

4 (a) (ii) Which of the foods contained carbohydrate **and** fat **and** protein?

Tick (√) one box.

- B, C and D only
- B and D only
- C only

(1 mark)
4 (b) A person’s diet should contain carbohydrate and fat and protein.

Give two reasons why.

1 ........................................................................................................................................

........................................................................................................................................

2 ........................................................................................................................................

........................................................................................................................................

(2 marks)

4 (c) As well as carbohydrate, fat and protein, the body also needs vitamins and mineral ions.

4 (c) (i) Why does the body need vitamins and mineral ions?

........................................................................................................................................

(1 mark)

4 (c) (ii) Draw a ring around the correct answer to complete the sentence.

Compared to the mass of carbohydrates, the body needs

a greater mass

a smaller mass

the same mass

of vitamins and mineral ions.

(1 mark)
Cannabis is an illegal drug.

5 (a) What type of illness might be caused by smoking cannabis regularly?

............................................................................................................................................

(1 mark)

5 (b) The graph shows the use of cannabis by 16–24 year olds in the UK between 1996 and 2008.

5 (b) (i) Use the graph to predict the percentage of 16–24 year olds who will use cannabis in 2014.

Show your working on the graph.

Percentage = .................................................................

(2 marks)
5 (b) (ii) Illegal drugs are classified as Class A, Class B or Class C. Class C drugs are the least dangerous.

In 2004, the government changed the classification of cannabis from Class B to Class C.

In 2009, the government changed the classification of cannabis back from Class C to Class B.

Do you think that changing the classification of cannabis back to a Class B drug will reduce the percentage of 16–24 year olds who use cannabis?

Use evidence from the graph to explain your answer.

6 The photographs show a food chain from a seashore. The photographs are not to the same scale.

Seaweed → Limpet → Crab → Gull

Students estimated the population and biomass of each of the organisms on part of a seashore.

The table shows the students’ results.

<table>
<thead>
<tr>
<th>Organism</th>
<th>Population</th>
<th>Mean mass of one organism in grams</th>
<th>Biomass of population in grams</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seaweed</td>
<td>50</td>
<td>4000</td>
<td>200 000</td>
</tr>
<tr>
<td>Limpet</td>
<td>1200</td>
<td>30</td>
<td>36 000</td>
</tr>
<tr>
<td>Crab</td>
<td>100</td>
<td>90</td>
<td>9 000</td>
</tr>
<tr>
<td>Gull</td>
<td>2</td>
<td>900</td>
<td></td>
</tr>
</tbody>
</table>

6 (a) (i) Use the data in the table to calculate the biomass of the gull population.

............................................................................................................................................
............................................................................................................................................

Biomass = .................................................. g

(1 mark)
6 (a) (ii) Draw a pyramid of biomass for this food chain.

Label the pyramid.

(2 marks)

6 (b) The biomass of the crab population is much less than the biomass of the limpet population.

Suggest two reasons why.

1 ...........................................................................................................................................
............................................................................................................................................

2 ...........................................................................................................................................
............................................................................................................................................

(2 marks)

Turn over for the next question
7 (a) Complete the sentences about evolution.

Draw a ring around the correct answer to complete each sentence.

7 (a) (i) Darwin suggested the theory of evolution by ____________

- artificial
- natural
- asexual

(1 mark)

7 (a) (ii) Darwin’s theory of evolution says that all species of living things have evolved from

- artificial
- complex
- simple

life forms.

(1 mark)

7 (a) (iii) Most scientists believe that life first developed about

- three billion
- three million
- three thousand

years ago.

(1 mark)

7 (b) Darwin’s theory of evolution was only slowly accepted by other people.

Give **two** reasons why.

1 ........................................................................................................................................

2 ........................................................................................................................................

(2 marks)
7 (c) **Diagram 1** shows one model of the relationship between some animals.

![Diagram 1]

7 (c) (i) Complete the sentence.

The model shown in **Diagram 1** is an evolutionary ........................................................ .

(1 mark)

7 (c) (ii) Which two of the animals in **Diagram 1** are most closely related?

.................................................................. and ..................................................................

(1 mark)

7 (c) (iii) **Diagram 2** shows a more recent model of the relationship between the animals.

![Diagram 2]

Suggest one reason why scientists have changed the model of the relationships between the animals shown in the diagram.

Draw a ring around the correct answer.

more powerful computers new evidence from fossils new species discovered

(1 mark)
A gardener grew four varieties of pea plants, A, B, C and D, in his garden. The gardener counted the number of peas in each pod growing on each plant. The table shows his results.

<table>
<thead>
<tr>
<th>Variety</th>
<th>Range of number of peas in each pod</th>
<th>Mean number of peas in each pod</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>2–6</td>
<td>4</td>

<tr>
<td>B</td>
<td>3–7</td>
<td>5</td>
</tr>
<tr>
<td>C</td>
<td>3–8</td>
<td>6</td>
</tr>
<tr>
<td>D</td>
<td>6–8</td>
<td>7</td>
</tr>
</tbody>
</table>

8 (a) Give **one** environmental factor and **one other** factor that might affect the number of peas in a pod.

Environmental factor ........................................................................................................................................

Other factor ..................................................................................................................................................

(2 marks)
8 (b) The gardener thinks that he will get the largest mass of peas from his garden if he grows variety D.

Why is the gardener not correct?

Suggest one reason.

............................................................................................................................................
............................................................................................................................................
............................................................................................................................................
............................................................................................................................................
............................................................................................................................................

(1 mark)

8 (c) It is important that carbon is cycled through living things.

After he has picked the peas, the gardener puts the dead pea plants onto a compost heap.

Over the next few months, the carbon in the carbon compounds from the pea plants is returned to the air.

Describe how.

A student is given a tube containing a liquid nutrient medium. The medium contains one type of bacterium.

In this question you will be assessed on using good English, organising information clearly and using specialist terms where appropriate.

The student is told to grow some of the bacteria on agar jelly in a Petri dish.

Describe how the student should prepare an uncontaminated culture of the bacterium in the Petri dish.

You should explain the reasons for each of the steps you describe.
