For this paper you must have:
• a ruler.
You may use a calculator.

Time allowed
• 60 minutes

Instructions
• Use black ink or black ball-point pen.
• Fill in the boxes at the top of this page.
• Answer all questions.
• You must answer the questions in the space provided. Do not write outside the box around each page or on blank pages.
• Do all rough work in this book. Cross through any work you do not want to be marked.

Information
• The marks for questions are shown in brackets.
• The maximum mark for this paper is 60.
• You are expected to use a calculator where appropriate.
• You are reminded of the need for good English and clear presentation in your answers.
• Question 13 should be answered in continuous prose. In this question you will be marked on your ability to:
  – use good English
  – organise information clearly
  – use specialist vocabulary where appropriate.

Advice
• In all calculations, show clearly how you work out your answer.
1 (a) The diagram shows how pigs can be cloned.

For each question write the correct letter in the box.

Which structure, A, B, C or D is:

1 (a) (i) an egg cell  

1 (a) (ii) a nucleus  

1 (a) (iii) an embryo?
1 (b) Walking onion plants grow a bunch of bulblets (tiny bulbs).

The bulblets start to grow and the stalks bend over with the weight of the new growth.

This makes the onion plant seem to walk across the garden.

Producing plants in this way is called asexual reproduction.

Use words from the box to complete the following sentences.

<table>
<thead>
<tr>
<th>chromosome</th>
<th>clone</th>
<th>gamete</th>
<th>gene</th>
<th>parent</th>
</tr>
</thead>
</table>

Asexual reproduction needs only one .............................................. .

Asexual reproduction does not involve production of a ................................................ .

The daughter plant is called a ................................................ .

(3 marks)
2 The diagram shows how the number of species in different vertebrate groups changed between 400 million years ago and 5 million years ago.

The wider a block is, the more species there are.

2 (a) Which group had most species 200 million years ago?

........................................................................................................................... .................

(1 mark)

2 (b) To which group are birds most closely related?

........................................................................................................................... .................

(1 mark)

2 (c) Complete the following sentence.

A study of fossils gives evidence for the theory of ..........................................................  .

(1 mark)
Gardeners often collect fallen leaves in autumn and place them on compost heaps.

3 (a) Over the next year the leaves decay.
Which living things cause leaves to decay?
........................................................................................................................... .................
........................................................................................................................... .................
(1 mark)

3 (b) The leaves decay more quickly in summer than in winter.
Give one reason why.
........................................................................................................................... .................
........................................................................................................................... .................
(1 mark)

3 (c) The compost heap has holes in its sides to allow gases to enter.
Which gas is needed for decay?
........................................................................................................................... .................
(1 mark)
Students investigated how well antibacterial mouthwashes worked. They tested four different mouthwashes, P, Q, R and S.

- They spread bacteria on nutrient jelly in a Petri dish.
- They soaked identical discs of filter paper in mouthwashes P, Q, R or S.
- They placed the discs on the growing bacteria as shown in Diagram 1.
- They covered the Petri dish.
- They incubated the Petri dish for two days.

4 (a) The nutrient jelly was heated to 120 °C before being poured into the Petri dish.

Why is this necessary?

Tick (✓) one box.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>To make bacteria grow more quickly.</td>
<td></td>
</tr>
<tr>
<td>To kill microorganisms.</td>
<td></td>
</tr>
<tr>
<td>To make the nutrients dissolve.</td>
<td></td>
</tr>
</tbody>
</table>

(1 mark)
4 (b) What is the maximum temperature at which bacteria should be incubated in a school laboratory?

Tick (✓) one box.

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>15 °C</td>
<td></td>
</tr>
<tr>
<td>25 °C</td>
<td></td>
</tr>
<tr>
<td>37 °C</td>
<td></td>

The photograph shows a bird called the korhaan. Korhaans live in South Africa.

- Scientists have studied changes in the numbers of korhaans since 1997.
- The scientists asked volunteer drivers to record the number of korhaans they see for every 100 km they drive on particular roads.
- The bar chart shows changes in the numbers of korhaans seen by the volunteers between the start of 1997 and the end of 2008.
5 (a) This method of counting korhaans could have led to an inaccurate estimate of the number of korhaans.

Explain how.

...........................................................................................................................................................
...........................................................................................................................................................
...........................................................................................................................................................
...........................................................................................................................................................

(2 marks)

5 (b) Which statement best describes the change in the number of korhaans between 1997 and 2008?

Tick (✓) one box.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>There was a steady fall in the number of korhaans.</td>
<td></td>
</tr>
<tr>
<td>The number of korhaans went up and down, but there was an overall fall in numbers.</td>
<td></td>
</tr>
<tr>
<td>The number of korhaans went up and down, and there was no overall trend.</td>
<td></td>
</tr>
</tbody>
</table>

(1 mark)

5 (c) Korhaans live only amongst tall vegetation in areas of the country where there are few people.

Which is the most likely explanation for the change in the numbers of korhaans between 1997 and 2008?

Tick (✓) one box.

<table>
<thead>
<tr>
<th>Statement</th>
<th>Tick (✓)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Many korhaans have been killed by cars.</td>
<td></td>
</tr>
<tr>
<td>Many korhaans have been killed by people for food.</td>
<td></td>
</tr>
<tr>
<td>The habitat of the korhaans is disappearing.</td>
<td></td>

(3 marks)
8 Water is lost from the body in several ways. The pie chart shows the volume of water lost, in cm³, by a man on a cold day.

8 (a) (i) The total volume of water lost by the man was 3000 cm³. How much water was lost through the skin?

Volume of water lost through skin ............................................ cm³

(1 mark)

8 (a) (ii) The same man lost 1200 cm³ of water through the skin on a warm day. Give one reason for the different volumes of water lost on the two days.

.......................................................................................................................... ..................
.......................................................................................................................... ..................

(1 mark)

8 (b) To maintain water balance in the body, the total volume of water taken in must equal the total volume of water lost. Give two ways this is achieved on a hot day, when compared to a cold day. Tick (✓) two boxes.

The volume of water in the urine decreases. ✓

The volume of water in the faeces increases. ✓

The volume of water taken as food or drink increases. ✓

The volume of water breathed out decreases. ✓

(2 marks)
Dr Semmelweiss collected data about the number of deaths in the two maternity wards in the hospital where he worked.

- From 1833 to 1838 there were the same number of doctors and midwives delivering babies in both Ward 1 and Ward 2.
- From 1839 to 1847 medical students and doctors delivered babies in Ward 1; midwives delivered babies in Ward 2.

Dr Semmelweiss also noticed that doctors often came straight from examining dead bodies to the delivery ward.

The table shows the number of patients and the number of deaths in the two wards.

<table>
<thead>
<tr>
<th>Years</th>
<th>Ward</th>
<th>Number of patients</th>
<th>Number of deaths</th>
<th>Death rate as deaths per 1000 patients</th>
</tr>
</thead>
<tbody>
<tr>
<td>1833–1838</td>
<td>Ward 1</td>
<td>23 509</td>
<td>1505</td>
<td>64.0</td>
</tr>
<tr>
<td></td>
<td>Ward 2</td>
<td>13 097</td>
<td>731</td>
<td>55.8</td>
</tr>
<tr>
<td>1839–1847</td>
<td>Ward 1</td>

Some athletes use drugs containing the steroid testosterone to improve their performance.

In an investigation:

- scientists monitored the performance of 18 male athletes over a 6 week training programme
- 9 athletes were given weekly injections of testosterone with the dose of 3.5 milligrams per kilogram of body mass, for 6 weeks
- the other 9 athletes were given a placebo
- the athletes’ performance on a bench press exercise was measured at 3 weeks and 6 weeks.

The graph shows the results of the investigation.

12 (a) The data would have been better presented as a bar chart.
Give a reason why.

.................................................................................................................................................................
