

**Questions**

Q1.

This question is about acids and bases.

Identify the acid-base conjugate pairs in this reaction.

.....

(1)

**(Total for question = 1 mark)**

**Q2.**

This question is about acids and bases.

State what is meant by a Brønsted-Lowry base.

(1)

.....

**(Total for question = 1 mark)**

**Q3.**

This question is about acids and bases.

The ionic product of water,  $K_w$ , varies with temperature as shown.

Temperature / °C	$K_w / \text{mol}^2 \text{dm}^{-6}$
0	$0.11 \times 10^{-14}$
10	$0.29 \times 10^{-14}$
20	$0.68 \times 10^{-14}$
30	$1.47 \times 10^{-14}$
40	$2.92 \times 10^{-14}$
50	$5.48 \times 10^{-14}$

- (i) Determine the value of  $K_w$  at 45 °C by plotting a suitable graph.  
You must show your working on the graph.

**(3)**

- (ii) The ionic product of water at 30 °C is  $1.47 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$ .  
Calculate the pH of water at this temperature.

(3)

**(Total for question = 6 marks)**

**Q4.**

This question is about acids and bases.

A solution of methanoic acid, HCOOH, has a concentration of  $0.240 \text{ mol dm}^{-3}$  and a pH of 2.20.

Calculate the value of  $pK_a$  for methanoic acid.

**(3)**

**(Total for question = 3 marks)**

**Q5.**

This question is about acids and bases.

Calculate the concentration of hydrogen ions, in mol dm<sup>-3</sup>, in a solution with a pH of 9.43

(1)

**(Total for question = 1 mark)**

**Q6.**

Calculate the pH of the solution formed when

51.2 cm<sup>3</sup> of 0.927 mol dm<sup>-3</sup> NaOH(aq) is mixed with

40.4 cm<sup>3</sup> of 0.370 mol dm<sup>-3</sup> H<sub>2</sub>SO<sub>4</sub>(aq).

[Ionic product of water  $K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$ ]

(6)

**(Total for question = 6 marks)**

**Q7.**

This question is about acids and bases.

The pH of two salt solutions, **J** and **K**, are

solution **J** pH = 5

solution **K** pH = 9

The solutions are equimolar.

Which acids and bases could form the salts in solutions **J** and **K**?

(1)

	Acid and base forming the salt in solution <b>J</b>	Acid and base forming the salt in solution <b>K</b>
<input type="checkbox"/> <b>A</b>	HCl(aq) and NH <sub>3</sub> (aq)	CH <sub>3</sub> COOH(aq) and NaOH(aq)
<input type="checkbox"/> <b>B</b>	HCl(aq) and NaOH(aq)	CH <sub>3</sub> COOH(aq) and NH <sub>3</sub> (aq)
<input type="checkbox"/> <b>C</b>	CH <sub>3</sub> COOH(aq) and NaOH(aq)	HCl(aq) and NaOH(aq)
<input type="checkbox"/> <b>D</b>	CH <sub>3</sub> COOH(aq) and NH <sub>3</sub> (aq)	HCl(aq) and NH <sub>3</sub> (aq)

(Total for question = 1 mark)

**Q8.**

This question is about acids and bases.

Devise an experiment to determine the acid dissociation constant,  $K_a$ , for a solution of ethanoic acid,  $\text{CH}_3\text{COOH}$ , of unknown concentration.

Assume you have access to a pH meter and a solution of sodium hydroxide of similar concentration to the acid.

Include how to determine  $K_a$  from your results.

## Q10.

This question is about an experiment to determine the equilibrium constant,  $K_c$ , for an esterification reaction producing propyl ethanoate. The equation for the reaction is

In an experiment to determine the equilibrium constant,  $K_c$ , the following steps were carried out.

- 6.0 cm<sup>3</sup> of ethanoic acid (0.105 mol), 6.0 cm<sup>3</sup> of propan-1-ol (0.080 mol) and 2.0 cm<sup>3</sup> of dilute hydrochloric acid were mixed together in a sealed boiling tube. In this pre-equilibrium mixture, there is 0.111 mol of water
- The mixture was left for one week, at room temperature and pressure, to reach equilibrium
- The equilibrium mixture and washings were transferred to a volumetric flask and the solution made up to exactly 250.0 cm<sup>3</sup> using distilled water
- 25.0 cm<sup>3</sup> samples of the **diluted** equilibrium mixture were titrated with a solution of sodium hydroxide, concentration 0.200 mol dm<sup>-3</sup>, using phenolphthalein as the indicator
- The mean titre was 23.60 cm<sup>3</sup> of 0.200 mol dm<sup>-3</sup> sodium hydroxide solution.

(a) State the role of the hydrochloric acid in the esterification reaction.

(1)

.....  
.....

(b) (i) Calculate the total amount, in moles, of acid present in the **volumetric flask** in the equilibrium mixture.

(2)

(ii) The 2.0 cm<sup>3</sup> of dilute hydrochloric acid contained 0.00400 mol of H<sup>+</sup>(aq) ions.

Use this and your answer to part (b)(i) to calculate the amount, in moles, of ethanoic acid present in the equilibrium mixture.

(1)

(c) (i) The initial mixture in the boiling tube contained 0.105 mol of ethanoic acid.

Use your answer to (b)(ii) to calculate the amount, in moles, of ethanoic acid that reacted to form the ester in the equilibrium mixture.

(1)

(ii) Use information given in the method, and your answer to (c)(i), to calculate the amounts, in moles, of propan-1-ol, propyl ethanoate and water that are present in the equilibrium mixture.

(3)

Moles of propan-1-ol at equilibrium

.....

Moles of propyl ethanoate at equilibrium

.....

Moles of water at equilibrium

.....

(d) (i) Write the expression for the equilibrium constant,  $K_c$ , for this reaction.

(1)

(ii) Explain why it is possible, in this case, to calculate  $K_c$  using equilibrium amounts in moles, rather than equilibrium concentrations.

(2)

.....

.....

.....

.....

(iii) Calculate the value of  $K_c$ .

Give your answer to an appropriate number of significant figures.

(2)

(e) The pink colour of the phenolphthalein fades after the end-point of the titration has been reached.

Give a possible explanation for this observation.

(2)

.....

.....

.....

.....

(f) Explain what you could do to confirm that one week is sufficient time for the mixture to reach equilibrium.

(2)

.....

.....

.....

.....

(g) A student repeated the experiment, but left the mixture in a water bath at 40 °C until equilibrium was reached.

Deduce the effect, if any, on this student's value for  $K_c$  compared with that obtained in part (d)(iii).

(2)

## Q11.

Boric acid,  $\text{H}_3\text{BO}_3$ , is a weak acid with antiseptic properties.

In aqueous solution, boric acid dissociates into ions in three stages.  
The equation for the first dissociation is

$\text{p}K_{\text{a}}$  for this dissociation is 9.24

(i) Calculate the pH of a  $0.0500 \text{ mol dm}^{-3}$  solution of boric acid from the  $\text{p}K_{\text{a}}$  value for the first dissociation.

(3)

(ii) State any assumptions you made in your calculation in (i).

(2)

.....

.....

.....

.....

.....

**(Total for question = 5 marks)**

**Q12.**

This question is about acids and bases.

State what is meant by a Brønsted-Lowry acid.

(1)

.....

**(Total for question = 1 mark)**

**Q13.**

This question is about acids and buffer solutions.

A commercial nitric acid solution,  $\text{HNO}_3(\text{aq})$ , has a concentration of  $15.9 \text{ mol dm}^{-3}$ . A  $15.0 \text{ cm}^3$  sample was made up to  $100 \text{ cm}^3$  by adding deionised water.

Calculate the pH of this diluted solution.

(2)

**(Total for question = 2 marks)**

## Q14.

This question is about acids and buffer solutions.

Propanoic acid is a weak acid.

- (i) Calculate the pH of a  $0.100 \text{ mol dm}^{-3}$  solution of propanoic acid at 298 K.  
Give your answer to an appropriate number of significant figures.

$$[K_a = 1.35 \times 10^{-5} \text{ mol dm}^{-3} \text{ at } 298 \text{ K}]$$

(3)

- (ii) State **two** assumptions that you made in the calculation in (i).

(2)

.....

.....

.....

.....

.....

.....

**(Total for question = 5 marks)**

**Q15.**

This question is about weak acids.

A weak acid, HX, has a  $K_a$  value of  $5.25 \times 10^{-5} \text{ mol dm}^{-3}$ . A solution was formed by mixing  $10.5 \text{ cm}^3$  of  $0.800 \text{ mol dm}^{-3}$  dilute sodium hydroxide with  $25.0 \text{ cm}^3$  of  $0.920 \text{ mol dm}^{-3}$  HX(aq).

Calculate the pH of the solution formed, showing all your working.

**(5)**

**(Total for question = 5 marks)**

## Q16.

In acid-base neutralisation reactions, there is a temperature change.

\* The table shows the enthalpy changes of reaction when 1 mol of different acids are neutralised by sodium hydroxide solution, at 298 K.

Acid	Enthalpy change of reaction for 1 mol of acid / $\text{kJ mol}^{-1}$
hydrochloric acid, HCl	-58
nitric acid, $\text{HNO}_3$	-58
sulfuric acid, $\text{H}_2\text{SO}_4$	-115
ethanoic acid, $\text{CH}_3\text{COOH}$	-56

Comment on the relative enthalpy changes of reaction, using the data from the table and including any relevant equations.

**Q17.**

This question is about acids and bases.

Calculate the concentration of hydrogen ions, in mol dm<sup>-3</sup>, in a solution with a pH of 2.76

(1)

**(Total for question = 1 mark)**

## Q18.

2-Hydroxyethanoic acid, also known as glycolic acid,  $\text{CH}_2\text{OHCOOH}$ , is an alpha hydroxy acid used in some skincare products. It has a  $K_a$  value of  $1.5 \times 10^{-4} \text{ mol dm}^{-3}$ .

The structure of glycolic acid is

Glycolic acid has an acid dissociation constant of  $1.5 \times 10^{-4} \text{ mol dm}^{-3}$  compared with a value of  $1.7 \times 10^{-5} \text{ mol dm}^{-3}$  for ethanoic acid.

(i) Give a possible explanation as to why the value of  $K_a$  for glycolic acid is approximately ten times larger than that of ethanoic acid.

(2)

.....

.....

.....

.....

.....

.....

(ii) Complete the equation to show the conjugate acid-base pairs that would be produced when pure samples of glycolic acid and ethanoic acid are mixed.

(1)

**(Total for question = 3 marks)**

**Q19.**

2-Hydroxyethanoic acid, also known as glycolic acid,  $\text{CH}_2\text{OHCOOH}$ , is an alpha hydroxy acid used in some skincare products. It has a  $K_a$  value of  $1.5 \times 10^{-4} \text{ mol dm}^{-3}$ .

The structure of glycolic acid is

(a) A solution of glycolic acid of concentration  $0.1 \text{ mol dm}^{-3}$  has a pH of 2.4

What is the approximate pH of the resulting solution after it has been diluted by a factor of 100?

(1)

- A** 1.4
- B** 2.4
- C** 3.4
- D** 4.4

(b) Another solution of glycolic acid has a pH of 2.0

Calculate the concentration of this solution.

(3)

**(Total for question = 4 marks)**

**Q20.**

This question is about acids and bases.

Write the expression that defines the pH of a solution.

**(1)**

**(Total for question = 1 mark)**

**Q21.**

This question is about acids and bases.

Explain why the pH of a  $1 \times 10^{-8} \text{ mol dm}^{-3}$  solution of nitric acid,  $\text{HNO}_3$ , is not 8.

[Ionic product of water,  $K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$ ]

(2)

.....

.....

.....

.....

.....

.....

.....

**(Total for question = 2 marks)**

**Q22.**

This is a question about water.

An equation for the ionisation of water is

The expression for the ionic product of water is

$$K_w = [\text{H}^+(\text{aq})][\text{OH}^-(\text{aq})]$$

The value of  $K_w$  at 310 K is  $2.40 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$

(i) Calculate the pH of water at 310 K.

Give your answer to **two** decimal places.

(2)

(ii) Predict, with a reason, whether water is acidic, alkaline or neutral at 310 K.

(2)

.....

.....

.....

.....

(iii) Predict, with a reason, the sign of the enthalpy change for the ionisation of water.

(1)

.....

.....

.....

.....

**(Total for question = 5 marks)**

Q23.

Answer the question with a cross in the box you think is correct . If you change your mind about an answer, put a line through the box  and then mark your new answer with a cross .

The standard molar enthalpy change of neutralisation is the enthalpy change when an acid and an alkali react under standard conditions to form one mole of water.

An experiment was carried out with a solution of ethanoic acid and sodium hydroxide solution of the same concentration.

(i) Which graph shows the correct way that the maximum temperature rise should be determined?

(1)

(ii) Explain why the data book value for the standard enthalpy change of neutralisation of ethanoic acid with sodium hydroxide is  $-55.2 \text{ kJ mol}^{-1}$  but the value for hydrochloric acid is  $-57.1 \text{ kJ mol}^{-1}$ .

## Q16.

Question Number	Answer	Additional Guidance	Mark												
*	<p>This question assesses a student's ability to show a coherent and logically structured answer with linkages and fully-sustained reasoning.</p> <p>Marks are awarded for indicative content and for how the answer is structured and shows lines of reasoning.</p> <p>The following table shows how the marks should be awarded for indicative content.</p> <table border="1"> <thead> <tr> <th>Number of indicative marking points seen in answer</th> <th>Number of marks awarded for indicative marking points</th> </tr> </thead> <tbody> <tr> <td>6</td> <td>4</td> </tr> <tr> <td>5-4</td> <td>3</td> </tr> <tr> <td>3-2</td> <td>2</td> </tr> <tr> <td>1</td> <td>1</td> </tr> <tr> <td>0</td> <td>0</td> </tr> </tbody> </table>	Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points	6	4	5-4	3	3-2	2	1	1	0	0	<p>Guidance on how the mark scheme should be applied:</p> <p>The mark for indicative content should be added to the mark for lines of reasoning. For example, an answer with five indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).</p> <p>If there are no linkages between points, the same five indicative marking points would yield an overall score of 3 marks (3 marks for indicative content and no marks for linkages).</p>	
Number of indicative marking points seen in answer	Number of marks awarded for indicative marking points														
6	4														
5-4	3														
3-2	2														
1	1														
0	0														

	<p>The following table shows how the marks should be awarded for structure and lines of reasoning.</p> <table border="1" data-bbox="395 331 922 943"> <thead> <tr> <th data-bbox="395 331 730 539"></th> <th data-bbox="730 331 922 539">Number of marks awarded for structure of answer and sustained line of reasoning</th> </tr> </thead> <tbody> <tr> <td data-bbox="395 539 730 734">Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.</td> <td data-bbox="730 539 922 734">2</td> </tr> <tr> <td data-bbox="395 734 730 846">Answer is partially structured with some linkages and lines of reasoning.</td> <td data-bbox="730 734 922 846">1</td> </tr> <tr> <td data-bbox="395 846 730 943">Answer has no linkages between points and is unstructured.</td> <td data-bbox="730 846 922 943">0</td> </tr> </tbody> </table>		Number of marks awarded for structure of answer and sustained line of reasoning	Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2	Answer is partially structured with some linkages and lines of reasoning.	1	Answer has no linkages between points and is unstructured.	0	<p>In general it would be expected that 5 or 6 indicative points would get 2 reasoning marks. 3 and 4 indicative points would get 1 mark for reasoning and 0, 1 or 2 indicative points would score zero marks for reasoning.</p>	(6)
	Number of marks awarded for structure of answer and sustained line of reasoning										
Answer shows a coherent and logical structure with linkages and fully sustained lines of reasoning demonstrated throughout.	2										
Answer is partially structured with some linkages and lines of reasoning.	1										
Answer has no linkages between points and is unstructured.	0										

	<p><b>Comment:</b> Look for the indicative marking points first, then consider the mark for the structure of answer and sustained line of reasoning.</p> <p><b>Indicative content</b></p> <p><b>Hydrochloric acid and nitric acid</b></p> <ul style="list-style-type: none"> <li>• (same value for) hydrochloric acid <b>and</b> nitric acid as they are strong / completely dissociated into ions (in solution)</li> <li>• reaction taking place is <math>\text{H}^+ + \text{OH}^- \rightarrow \text{H}_2\text{O}</math> / <math>\text{H}_3\text{O}^+ + \text{OH}^- \rightarrow 2\text{H}_2\text{O}</math></li> </ul>	<p>Allow correct formulae for names throughout the answer</p> <p>Ignore sulfuric acid as strong(est) acid</p> <p>Allow <math>\text{HCl} + \text{NaOH} \rightarrow \text{NaCl} + \text{H}_2\text{O}</math> <b>and</b> <math>\text{HNO}_3 + \text{NaOH} \rightarrow \text{NaNO}_3 + \text{H}_2\text{O}</math></p> <p>Allow hydrochloric acid <b>and</b> nitric acid are both monoprotic / monobasic / provide 1 mol <math>\text{H}^+</math> / produce 1 mol <math>\text{H}_2\text{O}</math></p>

	<p>An explanation that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>• <math>[H^+]</math> / <math>[H_3O^+]</math> / concentration of hydrogen ions from water is <math>1(.0) \times 10^{-7}</math> (mol dm<sup>-3</sup>) <b>(1)</b></li> <li>• so total <math>[H^+]</math> is greater than <math>1(.0) \times 10^{-7}</math> (mol dm<sup>-3</sup>) / is <math>1.1 \times 10^{-7}</math> (mol dm<sup>-3</sup>)</li> </ul> <p><b>or</b> the pH cannot be more than 7 / alkaline (for an acid)</p> <p><b>or</b> concentration of hydrogen ions from water is not negligible / cannot be ignored</p> <p><b>or</b> <math>10^{-8}</math> is only the concentration of ions from the acid, it doesn't include those from the water <b>(1)</b></p>	<p>Penalise reference to nitric acid as a weak acid in M2 only</p> <p>Allow <math>[H^+]</math> from water = <math>\sqrt{1(.00) \times 10^{-14} / \sqrt{K_w}}</math> Allow this shown as part of a calculation</p> <p>Allow <math>[H_3O^+]</math> / concentration of hydrogen ions for <math>[H^+]</math> Allow <math>[H^+]</math> is greater than <math>1 \times 10^{-8}</math> (mol dm<sup>-3</sup>) Allow <math>[H^+]</math> cannot be less than <math>[OH^-]</math> / <math>[OH^-]</math> cannot be more than <math>[H^+]</math> Allow the addition of nitric acid to water decreases pH by increasing <math>[H^+]</math></p> <p>Allow pH is 6.96 Allow pH 8 / &gt;7 is alkaline Allow acid must have pH below 7 Do not award <math>10^{-14} / 10^{-8} = 10^{-6}</math> so pH = 6 for M2 only</p> <p>Allow water also dissociates to form <math>H^+</math> ions</p>	<b>(2)</b>

Q22.

Question Number	Answer	Additional Guidance	Mark
(i)	<ul style="list-style-type: none"> <li>square root of <math>K_w</math> at 310K to get <math>[H^+]</math> (1)</li> <li>calculation of pH to 2 decimal places (1)</li> </ul>	<p>Example of calculation:</p> $[H^+] = (\sqrt{2.40 \times 10^{-14}}) = 1.549 \dots \times 10^{-7} \text{ (mol dm}^{-3}\text{)}$ $\text{pH} = (-\log 1.549 \dots \times 10^{-7}) = (6.809894379) = 6.81$ <p>Correct answer with no working scores (2)</p> <p>Allow TE from incorrect <math>[H^+]</math> as long as answer is in the pH range 6.00 – 7.00 inclusive</p>	(2)

Question Number	Answer	Additional Guidance	Mark
(ii)	<p>An answer that makes reference to the following points:</p> <ul style="list-style-type: none"> <li>(M1) neutral (1)</li> <li>(M2) because <math>[H^+(aq)] = [OH^-(aq)]</math> /equal amounts of <math>H^+</math> and <math>OH^-</math> ions (1)</li> </ul>	<p>Acidic or alkaline scores (0)</p> <p>Allow both <math>[H^+]</math> and <math>[OH^-]</math> have increased equally (from 298 K to 310 K)</p> <p>M2 dependent on M1</p>	(2)

Question Number	Answer	Additional Guidance	Mark
(iii)	<p>An answer that makes reference to the following point:</p> <ul style="list-style-type: none"> <li>positive / + sign because <math>K_w</math> increases as the temperature increases</li> </ul>	<p>Allow 'positive because'</p> <p>bond breaking requires energy or equilibrium shifts to the right or there is greater/more ionisation/dissociation</p> <p>Ignore 'endothermic'</p>	(1)

Q23.

Question Number	Answer	Mark
(i)	<p>The only correct answer is B</p> <p><i>A is not correct because there is no extrapolation to the largest temperature increase carried out</i></p> <p><i>C is not correct because the extrapolation is at the wrong time</i></p> <p><i>D is not correct because the extrapolation extends beyond the time of addition of alkali</i></p>	(1)

Question Number	Answer	Additional Guidance	Mark
(ii)	<p>An explanation that makes reference to</p> <ul style="list-style-type: none"><li>ethanoic acid is a weak(er) acid / only partially ionised/dissociated (1)</li><li>(some) energy is used to fully/completely ionise the ethanoic acid (1)</li></ul>	<p>Allow hydrochloric acid is a strong(er) acid/fully ionised</p> <p>Do not award 'more NaOH will react so more energy given off'</p>	(2)
