

# Rings, Polymers & Analysis

## Spectroscopy MARK SCHEME

1. (a) **infrared – 1 mark only**

shows (very broad) peak between 2500–3300 ( $\text{cm}^{-1}$ )  
(due to O–H bond) ✓

*ALLOW (very broad) peak around 3000 ( $\text{cm}^{-1}$ ) OR any stated value between 2500 and 3300 ( $\text{cm}^{-1}$ ) for O–H*

*DO NOT ALLOW peak in range 3200–3550 ( $\text{cm}^{-1}$ )*

*IGNORE any reference to C=O or C–O as both are also present in an ester OR to fingerprint region*

**$^{13}\text{C}$  NMR – 2 marks**

( $\text{CH}_3$ )<sub>2</sub>CHCH<sub>2</sub>COOH has 4 peaks (due to 4 different C environments) ✓

( $\text{CH}_3$ )<sub>3</sub>CCOOH has 3 peaks (due to 3 different C environments) ✓

*ALLOW ‘ $^{13}\text{C}$  NMR detects the number of/different C environments’ for 1 ✓, suitable example for the 2nd mark 3*

3

(b) **splitting pattern**

explains any two in terms of ‘n + 1 rule’ for two marks ✓✓

Explains any one peak for 1 mark ✓

*1 mark for correct ester*

*if two splitting patterns are correctly analysed ignore the third*

- *singlet* therefore adjacent C (if any) has no Hs

*ALLOW singlet because next or bonded to an O*

- *multiplet OR* split into 7 therefore adjacent Cs have lots of/6 Hs

*ALLOW multiplet/heptet because next to 2 CH<sub>3</sub>s*

- *doublet* therefore adjacent C is bonded to 1H

*ALLOW doublet because next to a CH*

*must spell one of multiplet / heptet, singlet, doublet correctly*

**max = 2 marks**

**chemical shifts**

two marks if any two absorptions are identified correctly ✓✓

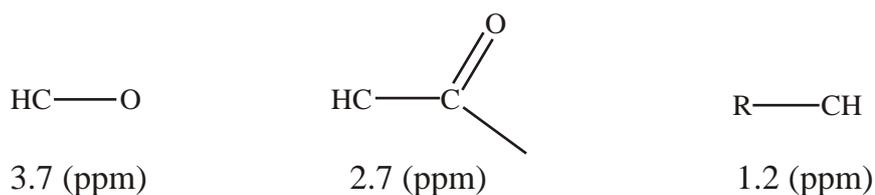

one mark if any one absorption is identified correctly ✓

*ALLOW tolerance on  $\delta$  values; 3.6–3.8, 2.6–2.8 and 1.1–1.3 (ppm)*

- peak ~3.7 (ppm) – bonded to an O
- peak ~2.7 (ppm) – indicates it is next to a C=O
- peak ~1.2 (ppm) – bonded to other Cs **OR** part of a chain

**max = 2 marks**

*ALLOW any two gets 2 marks, any one scores 1 mark*

*ALLOW peaks labelled on the spectrum*

*ALLOW singlet must be bonded to O, multiplet to C=O and doublet to CH or R for both chemical shift marks*

*if two chemical shifts are correctly identified **IGNORE** the third*

compound identified as  $(\text{CH}_3)_2\text{CHCOOCH}_3$  ✓✓

compound identified as  $\text{CH}_3\text{COOCH}(\text{CH}_3)_2$  ✓

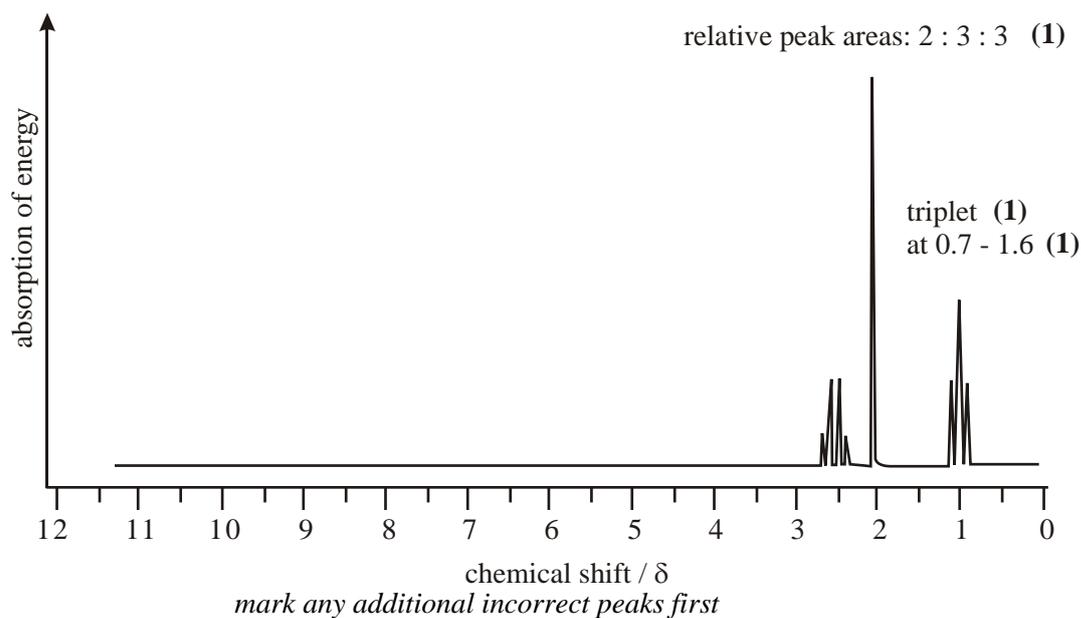

6

[9]

2. (i) the peak is due to the  $\text{CH}_3\text{CO}$ - group (1)
- not split, so next to a C with no protons / has no neighbouring proton /  $\delta$  value is in the range 2.0 – 2.9 (1) 2
- (ii) adjacent to a C with three protons / to a  $\text{CH}_3$  (1) 1

(iii) and (iv)

3

[6]

### 3. IR

#### Similarities

Any 2 of the following three peaks (must give the quoted range)

peak corresponding to OH in all three ( $3230 - 3550 \text{ cm}^{-1}$ ) (1)

peak corresponding to NH in all three ( $3100 - 3500 \text{ cm}^{-1}$ ) (1)

peak corresponding to CO in all three ( $1000 - 1300 \text{ cm}^{-1}$ ) (1)

2 max

#### Differences

only shown in the fingerprint region (1)

1

#### Mass Spec

##### similarities

$M_r$  (75)/ base peak will be the same (1)

1

$M + 1$  peak same (1)

1

##### Differences

Fragmentation pattern may show differences between isomers / specific example, eg  $\text{CH}_3^+$  at  $m/e$  15 (1)

1

(MAX 5)

#### QWC

Use of any two terms from: functional group / amino group / hydroxy group / fingerprint / fragmentation / fragment ion(s) / base peak or molecular ion /  $M + 1$  peak /  $m/e$

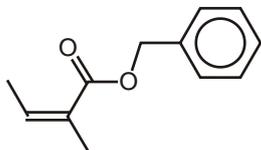

1

[6]

6. (a) (i) alkene (1)  
 ester (1)  
*allow "C=C double bond"* 2

i.

(1)

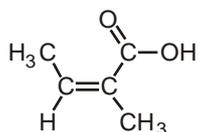

1

ii. C<sub>12</sub>H<sub>14</sub>O<sub>2</sub> (1)

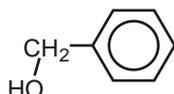

1

- (b) same structural formula/order of bonds,  
 different spacial arrangement **AW** (1)  
 description or diagram showing **B** and how it is different from **A** (1) □ 2

(c)

(1)

(1)

2

- (d) (i) peak at 1680-1750 (cm<sup>-1</sup>) due to C=O (1)  
 peak at 1000-1300 (cm<sup>-1</sup>) due to C-O / (1) 2

- (ii) 2500-3300 / 3230-3550 (cm<sup>-1</sup>) (1)  
 O-H / carboxylic acid/alcohol is **not** present in **A** (1)  
 allow 1 mark for ~500-1500 (cm<sup>-1</sup>) which is a unique  
 fingerprint region etc 2

[12]

7. (a) low boiling point / easily turns to a gas **AW** (1) 1

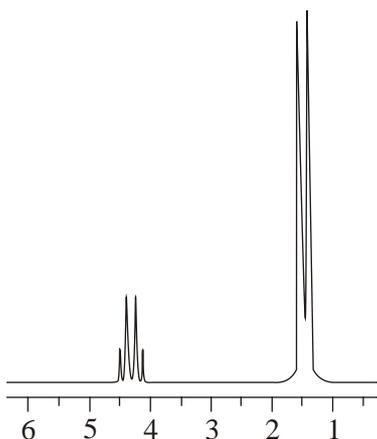

- (b) 2,4-dinitrophenylhydrazine / 2,4-DNP(H) / Brady's reagent (1)  
 purify/recrystallise the product/solid (derivative) (1)  
 measure the melting point /mp (1)  
 compare the result with data book/known values (1) 4

[5]

8. (a) (i) Molecular ion peak: the peak caused by the unfragmented molecule / the peak with the highest m/e value / the peak that tells you the Mr. 1
- Base peak : peak with the greatest (relative) intensity / peak representing most stable/abundant fragment  
**NOT** the tallest / biggest / most common peak 1
- (ii) The molecular ion is too unstable / will have been completely fragmented / may not carry a positive charge 1  
**NOT** peak too small to be seen / too little ion present
- (b) IR spectrum: 1
- C=O peak at approx  $1650\text{ cm}^{-1}$  ( $1680\text{-}1750\text{ cm}^{-1}$ ) 1
- broad O-H peak at value(s) between  $2500\text{-}3300\text{ cm}^{-1}$  1
- ignore** any references to C-O peak at  $1000\text{ - }1300\text{ cm}^{-1}$
- mass spectrum:
- Fragment with m/e = 31 is  $\text{CH}_2\text{OH}^+$  1
- Fragment at m/e = 45 is  $\text{COOH}^+$  1
- penalise missing + sign once only
- (c) 2 proton peak at  $\delta = 3.3\text{-}4.3$  – singlet (-CH<sub>2</sub>-) 1
- 1 proton peak at  $\delta = 3.5\text{-}5.5$  – singlet (-OH) 1
- 1 proton peak at  $\delta = 11.0\text{-}11.7$  – singlet (-COOH) 1
- (ranges of chemical shift ( $\delta$ ) values taken from data sheet)
- penalise each error once only
  - ignore peak areas/heights unless incorrectly labelled
- Labelled diagram of the structure of G proposed by the student may be used to provide evidence for the positioning of peaks on the sketched spectrum.
- Both** OH and COOH protons disappear on shaking with D<sub>2</sub>O 1

[11]

9. (i)

**splitting:**

doublet (1)

quartet (1)

*ignore any other peaks*

**position:**

doublet peak is at ~1.4 and

quartet peak is at ~4.3 (1)

*allow ecf from **one** incorrect splitting pattern*

**areas:**

1 and 3 on the correct peaks

(or either way round as ecf if any errors above) (1)

4

(ii) 4 (1)

OH/labile protons now visible AW (1)

2

[6]

10. (a) (i) Find the  $m/e$  of .... (1)

... the peak furthest to the right / with highest  $m/e$  or mass (1)

2

*allow attempts to cater for the  $^{13}\text{C}$  peak*

$\text{C}_2\text{H}_3\text{O}_2$  / empirical formula has  $M_r = 59$  (1)

so  $M_r$  of molecular formula is  $^{118}/_{59} = 2$  / twice the empirical formula (1)

2

(b) (i) OH peak disappears (with  $\text{D}_2\text{O}$  / on the second spectrum)

1

- (ii) no of peaks: one (1)  
 splitting: none (1)  
 all four protons equivalent / in the same environment (1) 3  
*if the wrong structure is chosen allow ecf for:*  
*two peaks (1),*  
*splitting (1)(1) (as last 2 marks for part (ii))*

[8]

11. (i) A C<sub>3</sub>H<sub>6</sub> (1) B C<sub>4</sub>H<sub>8</sub> (1) 2  
 (ii) A CH<sub>3</sub>CH=CH<sub>2</sub> (or displayed) ('sticks' penalised once) 1  
 (iii) C<sub>3</sub>H<sub>5</sub><sup>+</sup> (1) for formula and (1) for charge 2

[5]
