ADDITIONAL MATERIALS

In addition to this paper you will need a calculator and a ruler.

INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen.

Write your name, centre number and candidate number in the spaces at the top of this page.

Answer **all** questions.

Write your answers in the spaces provided in this booklet.

INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.

You are reminded of the necessity for good English and orderly presentation in your answers.

Assessment will take into account the quality of written communication (QWC) used in your answer to question **9**.

The Periodic Table is printed on the back cover of the examination paper and the formulae for some common ions on the inside of the back cover.

Answer **all** questions.

Examiner
only

1. (a) Draw a line from the reactants to the products they form.

[2]

Reactants

lithium and oxygen

sodium and chlorine

iron and fluorine

lithium and water

Products

sodium chloride

lithium hydroxide and hydrogen

lithium oxide

iron fluoride

- (b) Flame tests can be used to detect the presence of alkali metal ions.

red	yellow	blue	lilac
-----	--------	------	-------

Choose from the box the colours of the flames produced by the following ions.

[2]

Ion	Colour
lithium	
sodium	

- (c) Lithium oxide has the formula Li_2O . Calculate the M_r of lithium oxide.

[2]

$$A_r(\text{Li}) = 7 \quad A_r(\text{O}) = 16$$

$M_r = \dots\dots\dots$

6

2. A pupil studied the reaction between calcium carbonate powder and hydrochloric acid.

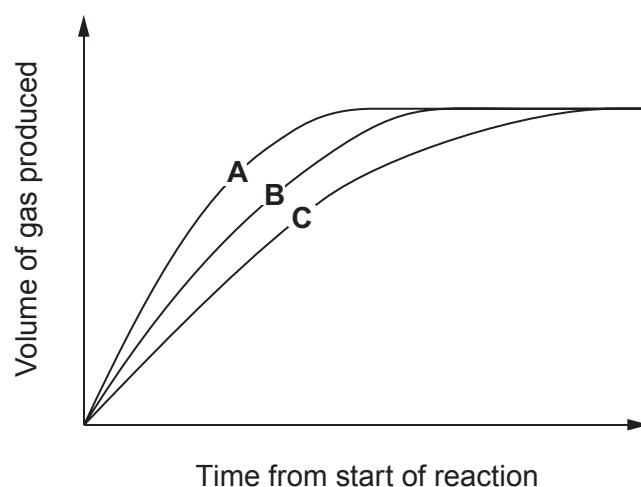

- (a) State what would be **seen** during this reaction. [1]

- (b) Choose from the box the apparatus that would **not** be suitable for measuring the volume of gas produced. [1]

measuring cylinder	conical flask	gas syringe	burette
--------------------	---------------	-------------	---------

- (c) The same pupil investigated the reaction at three different temperatures. The following graphs show the volume of gas produced over time during these three reactions.

- (i) State which reaction, **A–C**, was carried out at the highest temperature. Give a reason for your answer. [1]

- (ii) Apart from temperature, state **two** factors that could be changed in order to alter the rate of this reaction. [2]

..... and

- (d) Another pupil suggested that the same reaction could be studied using a balance.

- (i) Explain how this method works. [2]

.....

.....

.....

- (ii) Give **one** advantage of connecting the balance to a computer. [1]

.....

.....

3. The following graphs show the solubility curves for three substances, **X**, **Y** and **Z**.

- (a) Give the letter of the substance, **X**, **Y** or **Z**, whose solubility changes most with temperature. [1]

.....

- (b) Give **one** similarity and **one** difference between the solubilities of substances **X** and **Z** as the temperature increases. [2]

Similarity

Difference

- (c) The solubility of another substance, **W**, was recorded at different temperatures.
The results are shown in the table.

Temperature (°C)	0	20	40	60	80	100
Solubility (g per 100g of water)	15	20	27	36	47	60

- (i) Plot a graph of these results on the same grid and draw a suitable line. [3]
- (ii) Use the data to calculate the mass of crystals formed if a saturated solution of **W** containing 100g of water was cooled from 80 °C to 40 °C. [1]

Mass = g

7

4. The diagram shows the stages involved in the treatment of our mains water supply.

- (a) State the purpose of the filtration stage. [2]

.....

.....

- (b) Disinfection is the stage that makes the water safe to drink. State how this is done and how it makes the water safe to drink. [2]

.....

.....

- (c) State why hosepipe bans are sometimes introduced during the summer. [1]

.....

.....

- (d) Desalination removes salt from seawater by distillation to produce drinking water. Explain how this process can be carried out. [2]

.....

.....

5. (a) The following diagrams show the structures of an alkane and an alkene.

Name both compounds.

[1]

.....

.....

- (b) Describe **one** similarity and **one** difference between the structures of alkanes and alkenes. [2]

Similarity

.....

Difference

.....

- (c) Butane is an alkane containing four carbon atoms and ten hydrogen atoms. Draw its structural formula. [1]

6. The following boxes show some information about the structures of diamond and graphite.

- (a) State why both substances have high melting points. [1]

.....

.....

- (b) State which of the above substances will conduct electricity. Give a reason for your answer. [1]

Substance

Explanation

.....

- (c) Graphite is used in pencils. Explain in terms of structure why this is possible. [2]

.....

.....

7. The following diagrams show the electronic structures of five different elements, **A–E**.

Examiner
only**A****B****C****D****E**

- (a) State which elements, **A–E**, are found in Period 2 of the Periodic Table. Give a reason for your choice.

[2]

.....

.....

- (b) State which element, **A–E**, has an atomic number of 15. Give a reason for your answer.

[1]

.....

.....

- (c) Aluminium can be represented as $\begin{matrix} 27 \\ 13 \\ \text{Al} \end{matrix}$.

State what this tells you about the structure of its atoms.

[3]

.....

.....

.....

8. (a) Sodium bromide is formed by reacting sodium with bromine, Br₂.

Write the balanced **symbol** equation for the reaction.

[2]

- (b) A scientist has **solid** samples of sodium chloride and sodium iodide but is not sure which is which.

Describe how silver nitrate solution could be used to distinguish between them.

Give the observations expected for both substances.

[3]

.....

.....

.....

.....

- (c) During a chemical reaction, aluminium combines with chlorine to produce aluminium chloride, AlCl₃.

- (i) Balance the equation. [1]

- (ii) Calculate the percentage of chlorine present in aluminium chloride, AlCl₃. [3]

$$A_r(\text{Al}) = 27$$

$$A_r(\text{Cl}) = 35.5$$

Percentage chlorine = %

- (d) Electrolysis can be used to extract aluminium from its oxide. The equation for the reaction is as follows.

204 tonnes of aluminium oxide are expected to produce 108 tonnes of aluminium. However, only 81 tonnes are actually made.

- (i) Calculate the percentage yield of this process.

[1]

Percentage yield =%

- (ii) Suggest reasons why the actual amount produced was lower than expected.
