   A the running costs of the power station
   B a coal-fired power station
   C the current value of the power station
   D the cost of building the power station

3 The diagram shows a production possibility curve for maize and cotton.

Bad weather causes a poor harvest for both crops.

Which movement could be used to represent this change?
   A P to R  B Q to R  C S to Q  D S to R

4 The market for a good was in equilibrium. A change occurred which resulted in a new equilibrium with a higher price for the good and a lower quantity traded.

What change would have caused this?
   A the demand curve moved to the left
   B the demand curve moved to the right
   C the supply curve moved to the left
   D the supply curve moved to the right
5 A demand curve shows the relationship between the quantity demanded and
   A a change in income
   B consumer tastes
   C the supply of the product
   D the price of the product

6 A government subsidises the production of pineapples.

   This is likely to
   A increase the price of pineapples
