2 English as a global language

The following extract is from a 2016 article from *The Daily Dot*, an online magazine.

Discuss what you feel are the most important issues raised here relating to the changing use of English as a global language. You should refer to specific details from the passage as well as to ideas and examples from your wider study.

How the Internet is changing the English language

Thanks to the Internet, a previously undeveloped area of English language – informal writing – is blossoming globally. It began with ‘netspeak’, shortening words to single letters, eliminating vowels from other words. Now, thanks to developments in technology and just the sheer amount of information that gets onto the web every day, linguistic trends are as varied and numerous as the websites that spawn them. 5

But new ways of expressing one’s self on (and off) the web are always the subject of scrutiny, usually from corners that lament the death of ‘proper’ language. When you look closer, though, the way we write online is likely just as expressive as – and perhaps in some ways more expressive than – the ways we speak to each other in person or on the phone. 10

David Crystal was one of the first to come out in defense of netspeak – used mainly by teenagers as they texted one another. He noted that criticism of the form of speaking has died down since its fever pitch in the early 2000s.

‘I was in a school recently looking at a group of 16-year-olds’ text messages, and there were no text abbreviations there at all,’ Crystal wrote. ‘They simply weren’t cool any more. And one lad told me that he had stopped abbreviating when he noticed his parents had started. Definitely not cool.’ 15

The criticism that netspeak would lead children to have a poor handle on the English language also turned out to be completely unfounded, linguist Gretchen McCulloch said. ‘There’s a lot of moral panic about Internet language. But what studies have found is that kids who text more and who use more texting slang are also actually better at standard written English.’ 20

These ways of speaking also splinter across geographic regions, the dominant gender of any particular social network, and the platforms we use. In other words, there’s evidence that dialects proliferate on the web and, to a certain extent, generate on the web as well. 25

Additionally, Twitter’s geotags let linguists track local dialects. They reveal an archipelago of e-dialects that mirrors the geographical and cultural divisions of the physical country. For example, the abbreviation ikr (‘I know, right?’) occurs six times as often in Detroit as in the rest of the United States, while the emoticon ^-^, which denotes shyness, occurs four times more frequently in Southern California, where a large Korean community may have propelled it into the lexicon. 30

Not only are the kids going to be alright, McCulloch thinks, but they may even be better communicators, enabled by the myriad ways of expressing themselves through emoji, GIFs, and deliberate uses and misuses of capitalization, grammar, and punctuation.

Or maybe we’re just watching language change, as it always does and as it always has. As the kids say: _(^▽^)_/ 35
