

ADVANCED GCE MATHEMATICS

Core Mathematics 3

MONDAY 2 JUNE 2008

4723/01

Morning Time: 1 hour 30 minutes

Additional materials: Answer Booklet (8 pages) List of Formulae (MF1)

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the spaces provided on the answer booklet.
- Read each question carefully and make sure you know what you have to do before starting your answer.
- Answer **all** the questions.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.
- You are permitted to use a graphical calculator in this paper.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.
- You are reminded of the need for clear presentation in your answers.

This document consists of 4 printed pages.

v

1 Find the exact solutions of the equation |4x-5| = |3x-5|.

(i)
$$y = f^{-1}(x)$$
, [2]

(ii)
$$y = -2f(x)$$
. [3]

3 Find, in the form y = mx + c, the equation of the tangent to the curve

$$y = x^2 \ln x$$

at the point with *x*-coordinate e.

- 4 The gradient of the curve $y = (2x^2 + 9)^{\frac{5}{2}}$ at the point *P* is 100.
 - (i) Show that the *x*-coordinate of *P* satisfies the equation $x = 10(2x^2 + 9)^{-\frac{3}{2}}$. [3]
 - (ii) Show by calculation that the *x*-coordinate of *P* lies between 0.3 and 0.4. [3]
 - (iii) Use an iterative formula, based on the equation in part (i), to find the *x*-coordinate of *P* correct to 4 decimal places. You should show the result of each iteration. [3]
- 5 (a) Express $\tan 2\alpha$ in terms of $\tan \alpha$ and hence solve, for $0^{\circ} < \alpha < 180^{\circ}$, the equation

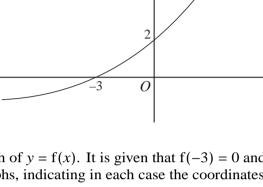

$$\tan 2\alpha \tan \alpha = 8.$$
 [6]

► x

- (b) Given that β is the acute angle such that $\sin \beta = \frac{6}{7}$, find the exact value of
 - (i) $\operatorname{cosec} \beta$, [1]
 - (ii) $\cot^2\beta$. [2]

2

[6]

[4]

The diagram shows the curves $y = e^{3x}$ and $y = (2x - 1)^4$. The shaded region is bounded by the two curves and the line $x = \frac{1}{2}$. The shaded region is rotated completely about the *x*-axis. Find the exact volume of the solid produced. [9]

- 7 It is claimed that the number of plants of a certain species in a particular locality is doubling every 9 years. The number of plants now is 42. The number of plants is treated as a continuous variable and is denoted by N. The number of years from now is denoted by t.
 - (i) Two equivalent expressions giving N in terms of t are

$$N = A \times 2^{kt}$$
 and $N = Ae^{mt}$.

Determine the value of each of the constants A, k and m.

- (ii) Find the value of t for which N = 100, giving your answer correct to 3 significant figures. [2]
- (iii) Find the rate at which the number of plants will be increasing at a time 35 years from now. [3]
- 8 The expression $T(\theta)$ is defined for θ in degrees by

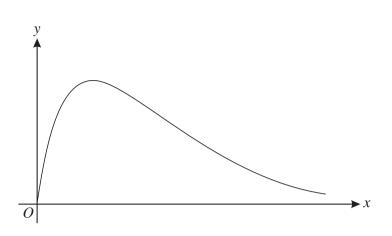

$$T(\theta) = 3\cos(\theta - 60^\circ) + 2\cos(\theta + 60^\circ).$$

- (i) Express $T(\theta)$ in the form $A \sin \theta + B \cos \theta$, giving the exact values of the constants A and B. [3]
- (ii) Hence express $T(\theta)$ in the form $R \sin(\theta + \alpha)$, where R > 0 and $0^{\circ} < \alpha < 90^{\circ}$. [3]
- (iii) Find the smallest positive value of θ such that $T(\theta) + 1 = 0$. [4]

[Question 9 is printed overleaf.]

6

[4]

The function f is defined for the domain $x \ge 0$ by

$$f(x) = \frac{15x}{x^2 + 5}$$

The diagram shows the curve with equation y = f(x).

- (i) Find the range of f.
- (ii) The function g is defined for the domain $x \ge k$ by

$$g(x) = \frac{15x}{x^2 + 5}$$

Given that g is a one-one function, state the least possible value of k. [1]

[6]

(iii) Show that there is no point on the curve y = g(x) at which the gradient is -1. [4]
