Paper 2 Pure Mathematics 2

May/June 2020

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **12** pages. Blank pages are indicated.

1 Solve the equation

$$\ln(x+1) - \ln x = 2 \ln 2. \quad [3]$$

This image shows a full page of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.

2 The polynomial $p(x)$ is defined by

$$p(x) = 6x^3 + ax^2 + 9x + b,$$

where a and b are constants. It is given that $(x - 2)$ and $(2x + 1)$ are factors of $p(x)$.

Find the values of a and b .

[5]

This image shows a full page of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page, providing a template for handwriting practice or general writing. There are no margins, text, or other markings on the page.

3 A curve has parametric equations

$$x = e^t - 2e^{-t}, \quad y = 3e^{2t} + 1.$$

Find the equation of the tangent to the curve at the point for which $t = 0$. [5]

[illegible]

- 4 (a)** Sketch, on the same diagram, the graphs of $y = |3x + 2a|$ and $y = |3x - 4a|$, where a is a positive constant.

Give the coordinates of the points where each graph meets the axes. [3]

- (b)** Find the coordinates of the point of intersection of the two graphs. [3]

.....

.....

.....

.....

.....

.....

.....

.....

- (c)** Deduce the solution of the inequality $|3x + 2a| < |3x - 4a|$. [1]

.....

.....

.....

.....

- (b) Use the equation in part (a) to show by calculation that the x -coordinate of M lies between 0.59 and 0.60. [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (c) Use an iterative formula, based on the equation in part (a), to find the x -coordinate of M correct to 3 significant figures. Give the result of each iteration to 5 significant figures. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

6 (a) Prove that

$$\sin 2\theta(\operatorname{cosec} \theta - \sec \theta) \equiv \sqrt{8} \cos\left(\theta + \frac{1}{4}\pi\right). \quad [5]$$

This image shows a full page of a handwriting practice worksheet. It consists of approximately 20 horizontal rows. Each row is defined by two parallel dotted lines, creating a series of uniform gaps for letter height. The lines are evenly spaced and extend across the entire width of the page, providing a guide for consistent letter formation. There is no text or other markings on the page.

(b) Solve the equation

$$\sin 2\theta(\operatorname{cosec} \theta - \sec \theta) = 1$$

for $0 < \theta < \frac{1}{2}\pi$. Give the answer correct to 3 significant figures. [2]

.....

.....

.....

.....

.....

.....

.....

.....

(c) Find $\int \sin x(\operatorname{cosec} \frac{1}{2}x - \sec \frac{1}{2}x) dx$. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- 7 (a) Find the quotient when $9x^3 - 6x^2 - 20x + 1$ is divided by $(3x + 2)$, and show that the remainder is 9. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Hence find $\int_1^6 \frac{9x^3 - 6x^2 - 20x + 1}{3x + 2} dx$, giving the answer in the form $a + \ln b$ where a and b are integers. [5]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (c) Find the exact root of the equation $9e^{9y} - 6e^{6y} - 20e^{3y} - 8 = 0$. [4]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Additional Page

If you use the following lined page to complete the answer(s) to any question(s), the question number(s) must be clearly shown.

[illegible]
