

# Mark Scheme (Results)

January 2020

Pearson Edexcel International GCSE  
In Further Pure Mathematics (4PM1)  
Paper 02

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme.

Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.

- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

- **Types of mark**

- M marks: method marks
- A marks: accuracy marks – can only be awarded when relevant M marks have been gained
- B marks: unconditional accuracy marks (independent of M marks)

- **Abbreviations**

- cao – correct answer only
- cso – correct solution only
- ft – follow through
- isw – ignore subsequent working
- SC - special case
- oe – or equivalent (and appropriate)
- dep – dependent
- indep – independent
- awrt – answer which rounds to
- eeoo – each error or omission

- **No working**

If no working is shown then correct answers may score full marks

If no working is shown then incorrect (even though nearly correct) answers score no marks.

- **With working**

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

If a candidate misreads a number from the question: eg. uses 252 instead of 255; follow through their working and deduct 2A marks from any gained provided the work has not been simplified. (Do not deduct any M marks gained.)

If there is a choice of methods shown, then award the lowest mark, unless the subsequent working makes clear the method that has been used

Examiners should send any instance of a suspected misread to review (but see above for simple misreads).

- **Ignoring subsequent work**

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. incorrect cancelling of a fraction that would otherwise be correct.

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect eg algebra.

- **Parts of questions**

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded to another.

## General Principles for Further Pure Mathematics Marking

(but note that specific mark schemes may sometimes override these general principles)

### Method mark for solving a 3 term quadratic equation:

#### 1. Factorisation:

$$(x^2 + bx + c) = (x + p)(x + q), \text{ where } |pq| = |c| \text{ leading to } x = \dots$$

$$(ax^2 + bx + c) = (mx + p)(nx + q) \text{ where } |pq| = |c| \text{ and } |mn| = |a| \text{ leading to } x = \dots$$

#### 2. Formula:

Attempt to use the **correct** formula (shown explicitly or implied by working) with values for  $a$ ,  $b$  and  $c$ , leading to  $x = \dots$

#### 3. Completing the square:

$$x^2 + bx + c = 0: \left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0, \quad q \neq 0 \quad \text{leading to } x = \dots$$

### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1. ( $x^n \rightarrow x^{n-1}$ )

#### 2. Integration:

Power of at least one term increased by 1. ( $x^n \rightarrow x^{n+1}$ )

### Use of a formula:

Generally, the method mark is gained by **either**

quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values

**or**, where the formula is not quoted, the method mark can be gained by implication from the substitution of correct values and then proceeding to a solution.

**Answers without working:**

The rubric states "Without sufficient working, correct answers may be awarded no marks".

General policy is that if it could be done "in your head" detailed working would not be required. (Mark schemes may override this eg in a case of "prove or show....")

**Exact answers:**

When a question demands an exact answer, all the working must also be exact. Once a candidate loses exactness by resorting to decimals the exactness cannot be regained.

**Rounding answers (where accuracy is specified in the question)**

Penalise only once per question for failing to round as instructed - ie giving more digits in the answers. Answers with fewer digits are automatically incorrect, but the isw rule may allow the mark to be awarded before the final answer is given.

## International GCSE Further Pure Mathematics – Paper 2 mark scheme

Question Number	Scheme	Marks
1	$\frac{ds}{dt} = 3t^2 + 8t - 27 = 8$ $3t^2 + 8t - 35 (= 0)$ $(3t - 7)(t + 5) = 0$ $t = \frac{7}{3}$	M1 A1  M1A1cao  <b>[4]</b>
M1 A1 M1 A1cao	Attempt the differentiation and equate their result to 8. Power of at least one term to decrease and none to increase' Obtain the correct 3TQ. Terms can be in any order and = 0 may be omitted. Attempt to solve their 3TQ by any valid method. Must reach $t = \dots$ For $t = \frac{7}{3}$ (negative answer must be omitted or eliminated) or $t = 2.33$ or better	

Question Number	Scheme	Marks
2(a)  (b)          (c)	$x \leq -1$ $8x^2 + 10x - 3 (< 0)$ $(4x - 1)(2x + 3) (< 0)$ $x = \frac{1}{4} \quad x = -\frac{3}{2}$ $-\frac{3}{2} < x < \frac{1}{4}$ $-\frac{3}{2} < x \leq -1$	B1 (1)          M1          A1A1          A1ft (4)          B1 (1)          <b>[6]</b>
(a) B1  (b) NB M1 A1 A1 A1ft  NB    (c) B1	For $x \leq -1$  Accept decimals in (b) and (c) NB The first 3 marks are for finding the critical values. Allow with $<$ or $=$ used. M1 Attempt to obtain the critical values by solving their 3TQ by any valid method. A1 Either CV correct A1 Second CV correct. Award these 2 marks if correct CVs seen in an inequality. A1ft Inequality formed to indicate the values between their CVs. Must use $<$ (Can be written in set language). NB If CVs incorrect and only shown in the inequality, award 0/4 if no working shown for solving their 3TQ: if working shown M1A0A0A1 is available.    For $-\frac{3}{2} < x \leq -1$ (no ft)	

Question Number	Scheme	Marks
3(a)  (b)   (c)	$AM = \sqrt{10^2 - 8^2} = 6$ $\cos C = \frac{26^2 + 16^2 - 26^2}{2 \times 16 \times 26} = \frac{256}{832} \left( = \frac{4}{13} \text{ oe} \right)$ $\angle BCD = 72^\circ$ $AD = \sqrt{26^2 - 10^2} = 24 \quad \text{or} \quad DM = \sqrt{26^2 - 8^2} = 6\sqrt{17} \text{ oe } (24.73\dots)$ $\tan(\angle DMA) = \frac{24}{6} \quad \text{or} \quad \cos(\angle DMA) = \frac{6}{6\sqrt{17}} \quad \text{or} \quad \sin(\angle DMA) = \frac{24}{6\sqrt{17}}$ $\angle DMA = 76^\circ$	M1,A1 (2)  M1A1  A1cao (3)  M1A1  M1  A1cao (4)
(a) M1 A1 NB (b) M1  A1 A1cao ALT M1A1 A1cao  (c) M1 A1 M1 A1cao	<p>Use Pythagoras, with a minus sign, to obtain the length of <math>AM</math>.            Correct length obtained.            Answers w/o working get both marks (use of (3,4,5) triangle)</p> <p>Use the cosine rule in <math>\triangle BCD</math> to obtain a numerical expression for <math>\cos C</math>. Correct formula in either form may be quoted and substitution attempted or correct formula can be implied by the correct substitution.            Complete method needed, so if another angle found first do not award this mark until a value for angle <math>BCD</math> is obtained.            Correct value for the cosine obtained (Decimal to be awrt 0.308 (0.30769...))            Award by implication if final answer is awrt <math>72^\circ</math>.            For <math>72^\circ</math> (from correct working)  <b>Use the isosceles triangle</b>  <math>\cos C = \frac{8}{26}</math> oe (Any trig function allowed provided work completed to a value for angle <math>BCD</math>)            For <math>72^\circ</math> (from correct working)</p> <p>Attempt the length of <math>AD</math> or <math>DM</math> using Pythagoras with a minus sign.            Correct value for their choice of line,            Use an appropriate trig function. The length of <math>AD</math> or <math>DM</math> must have been attempted with a + or a - sign.            Correct answer.</p> <p><b>Penalise once only in (b) and (c) for failing to round as instructed.</b></p>	<p style="text-align: right;"><b>[9]</b></p>

Question Number	Scheme	Marks
4(a)	$\overrightarrow{DC} = (11\mathbf{i} - p\mathbf{j}) - (4\mathbf{i} - 2p\mathbf{j}) = 7\mathbf{i} + p\mathbf{j} = \overrightarrow{AB}$ OR: $\overrightarrow{BC} = (11\mathbf{i} - p\mathbf{j}) - (7\mathbf{i} + p\mathbf{j}) = 4\mathbf{i} - 2p\mathbf{j} = \overrightarrow{AD}$ <p>Parallel and equal in length <math>\therefore</math> Parallelogram</p>	M1A1 A1cso (3)
(b)	$\overrightarrow{BD} = (4\mathbf{i} - 2p\mathbf{j}) - (7\mathbf{i} + p\mathbf{j}) = -3\mathbf{i} - 3p\mathbf{j} \text{ (or } 3(-\mathbf{i} - p\mathbf{j}) \text{ oe)}$ $\sqrt{9 + (3p)^2} = 3\sqrt{10} \text{ (}\Rightarrow 9 + 9p^2 = 90\text{)}$ $p = \pm 3$	B1 M1 A1 (3)
(c)	$(\pm) \frac{1}{3\sqrt{10}}(-3\mathbf{i} - 9\mathbf{j}) \text{ oe}$	B1ft (1)
	<b>[7]</b>	
(a)	Accept column vectors throughout.	
M1	Attempt $\pm \overrightarrow{DC}$ or $\pm \overrightarrow{BC}$ using the difference of 2 appropriate vectors in component form.	
A1	Show that $\pm \overrightarrow{DC}$ or $\pm \overrightarrow{BC} = \pm \overrightarrow{AB}$ or $\pm \overrightarrow{AD}$	
A1cso	Suitable conclusion with reason from correct working.	
	One pair of vectors only needed if reason is “parallel and equal”. Both pairs needed if reason is “2 pairs of sides parallel/equal”.	
(b)	For a correct $\overrightarrow{BD}$ or $\overrightarrow{DB}$ . No simplification needed.	
M1	Use the given length of $\overrightarrow{BD}$ with the length of their $\overrightarrow{BD}$ to form an equation	
A1	Obtain correct values for $p$ . Both needed.	
(c)		
B1ft	Use their positive value for $p$ to obtain a unit vector (no simplification needed)	

Question Number	Scheme	Marks
5 (a)    (b)	$x^2 - \frac{7}{2}x + 2 (=0)$ $2x^2 - 7x + 4 = 0$ $\frac{\alpha}{\beta} \times \frac{\beta}{\alpha} = 1$ $\frac{\alpha}{\beta} + \frac{\beta}{\alpha} = \frac{(\alpha + \beta)^2 - 2\alpha\beta}{\alpha\beta}$ $\frac{\frac{49}{4} - 4}{2}, = \frac{33}{8}$ $x^2 - \frac{33}{8}x + 1 (=0)$ $8x^2 - 33x + 8 = 0$	M1  A1 (2)  B1  M1  dM1A1  M1  A1 (6) <b>[8]</b>
(a) M1 A1  ALT M1 A1 NB; (b) B1 M1  dM1 A1 M1 A1	Use $x^2 - (\text{sum of roots})x + \text{product of roots} (=0 \text{ may be missing})$ Correct equation as shown or any <b>integer</b> multiple of this. Must have = 0 NB: A correct equation with no working scores 2  Eliminate $\alpha$ (or $\beta$ ) between the 2 equations and multiply through by $\alpha$ (or $\beta$ ) A correct quadratic equation with integer coefficients. Unknown can be $\alpha$ (or $\beta$ ) NB; isw any attempt to solve their equation.  Correct product of roots, seen explicitly or used. Attempt a single fraction for the sum of the roots with the numerator ready for substitution of known quantities. Denominator must be $\alpha\beta$ .  Substitute numbers in their single fraction. Correct value for sum (as shown or equivalent fraction) Use $x^2 - (\text{sum of roots})x + \text{product of roots} (=0 \text{ may be missing})$ Correct equation as shown or any <b>integer</b> multiple of this. Must have = 0
