Instructions

• Use black ink or ball-point pen.
• Fill in the boxes at the top of this page with your name, centre number and candidate number.
• Answer all questions.
• Answer the questions in the spaces provided – there may be more space than you need.
• You must show all your working.
• Diagrams are NOT accurately drawn, unless otherwise indicated.
• Calculators may be used.
• If your calculator does not have a π button, take the value of π to be 3.142 unless the question instructs otherwise.

Information

• The total mark for this paper is 80
• The marks for each question are shown in brackets – use this as a guide as to how much time to spend on each question.

Advice

• Read each question carefully before you start to answer it.
• Keep an eye on the time.
• Try to answer every question.
• Check your answers if you have time at the end.
1 The table shows the lengths of five rivers.

<table>
<thead>
<tr>
<th>River</th>
<th>Length (km)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trent</td>
<td>297</td>
</tr>
<tr>
<td>Don</td>
<td>112</td>
</tr>
<tr>
<td>Severn</td>
<td>354</td>
</tr>
<tr>
<td>Thames</td>
<td>346</td>
</tr>
<tr>
<td>Mersey</td>
<td>113</td>
</tr>
</tbody>
</table>

(a) Write down the rivers in order of length. Start with the shortest river.

(b) Show that Ami is correct.

Ami says,

“The River Thames is more than three times as long as the River Don.”

(Total for Question 1 is 2 marks)
2 Cups are sold in packs and in boxes.
   There are 12 cups in each pack.
   There are 18 cups in each box.

   Alison buys \( p \) packs of cups and \( b \) boxes of cups.

   Write down an expression, in terms of \( p \) and \( b \), for the total number of cups Alison buys.

3 Here are four digits.

\[
5 \quad 6 \quad 1 \quad 9
\]

(i) Write down the smallest possible two digit number that can be made with two of the digits.

(ii) Write down the three digit number closest to 200 that can be made with three of the digits.
4 \[ \frac{4}{5} \text{ of a number is 32} \]
Find the number.

(Total for Question 4 is 2 marks)

5 A path is made of white tiles and grey tiles.
\[ \frac{1}{4} \text{ of the tiles are white.} \]
(a) Write down the ratio of white tiles to grey tiles.

There is a total of 56 tiles.
(b) Work out the number of grey tiles.

(Total for Question 5 is 3 marks)
Here is a list of numbers.

\[ 12 \quad 15 \quad 14 \quad 17 \quad 22 \quad 19 \quad 13 \]

Bridgit says,

“To work out the median you find the middle number, so the median of these numbers is 17”

Bridgit’s answer is **not** correct.

(a) What is wrong with Bridgit’s method?

..................................................................................................................................................................................................................................................
..................................................................................................................................................................................................................................................

(1)

(b) Work out the range of the numbers in the list.

..................................................................................................................................................................................................................................................

(2)

(c) Work out the mean of the numbers in the list.

..................................................................................................................................................................................................................................................

(2)

(Total for Question 6 is 5 marks)
7 Priti is going to have a meal. She can choose one starter and one main course from the menu.

<table>
<thead>
<tr>
<th>Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td>Starter</td>
</tr>
<tr>
<td>Salad</td>
</tr>
<tr>
<td>Fish</td>
</tr>
<tr>
<td>Melon</td>
</tr>
</tbody>
</table>

Write down all the possible combinations Priti can choose.

..................................................................................................................................................................................................................................................
..................................................................................................................................................................................................................................................

(Total for Question 7 is 2 marks)

8 Joanne wants to buy a dishwasher.

The dishwasher costs £372

Joanne will pay a deposit of £36
She will then pay the rest of the cost in 4 equal monthly payments.

How much is each monthly payment?

£.......................................................

(Total for Question 8 is 2 marks)
9 Davos is a cleaner.

The table shows information about the time it will take him to clean each of four rooms in a house.

<table>
<thead>
<tr>
<th>Room</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kitchen</td>
<td>2 hours</td>
</tr>
<tr>
<td>Sitting room</td>
<td>1 hour 40 minutes</td>
</tr>
<tr>
<td>Bedroom</td>
<td>$\frac{3}{2}$ hours</td>
</tr>
<tr>
<td>Bathroom</td>
<td>45 minutes</td>
</tr>
</tbody>
</table>

Davos wants to clean all four rooms in one day. He will have breaks for a total time of 75 minutes.

Davos is going to start cleaning at 9 am.

Will he finish cleaning by 4 pm?
You must show all your working.
10  \(ABC\) is a straight line.

![Diagram of line segments A, B, and C]

The length \(AB\) is five times the length \(BC\).
\(AC = 90\) cm.

Work out the length \(AB\).

\[
\text{Work out the length } AB.
\]

\[
\text{....................................................... cm}
\]

(Total for Question 10 is 3 marks)

11  \(T = 4v + 3\)

(a) Work out the value of \(T\) when \(v = 2\)

\[
T = \text{....................................................... (2)}
\]

(b) Make \(v\) the subject of the formula \(T = 4v + 3\)

\[
\text{....................................................... (2)}
\]

(Total for Question 11 is 4 marks)
12 The diagram shows a cube of side length 2 cm.

Vera says,

“This volume of any solid made with 6 of these cubes is 48 cm³”

(a) Is Vera correct?
You must show your working.

..................................................................................................................................................................................................................................................
..................................................................................................................................................................................................................................................

(b) (i) Draw a cuboid that can be made with 6 of these cubes.
Write the dimensions of the cuboid on your diagram.

....................................................................................................................... cm²

(ii) Work out the surface area of your cuboid.

................................................................................................. cm²

(Total for Question 12 is 5 marks)
The size of the largest angle in a triangle is 4 times the size of the smallest angle. The other angle is 27° less than the largest angle.

Work out, in degrees, the size of each angle in the triangle. You must show your working.

(Total for Question 13 is 5 marks)
Andy went on holiday to Canada.
His flights cost a total of £1500

Andy stayed for 14 nights.
His hotel room cost $196 per night.

Andy used wifi for 12 days.
Wifi cost $5 per day.

The exchange rate was $1.90 to £1

(a) Work out the total cost of the flights, the hotel room and wifi.
   Give your answer in pounds.

£ .......................................................
(5)

(b) If there were fewer dollars to £1, what effect would this have on the total cost, in
   pounds, of Andy’s holiday?

...........................................................
(1)

(Total for Question 14 is 6 marks)
15 \( E = \{\text{odd numbers less than 30}\}\)
\( A = \{3, 9, 15, 21, 27\} \)
\( B = \{5, 15, 25\} \)

(a) Complete the Venn diagram to represent this information.

A number is chosen at random from the universal set, \( E \).

(b) What is the probability that the number is in the set \( A \cup B \)?

(Total for Question 15 is 6 marks)
16 Solve the simultaneous equations

\[
\begin{align*}
3x + y &= -4 \\
3x - 4y &= 6
\end{align*}
\]

\[
\begin{align*}
x &= \\
y &= 
\end{align*}
\]

(Total for Question 16 is 3 marks)
The table shows some information about the dress sizes of 25 women.

<table>
<thead>
<tr>
<th>Dress size</th>
<th>Number of women</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>2</td>
</tr>
<tr>
<td>10</td>
<td>9</td>
</tr>
<tr>
<td>12</td>
<td>8</td>
</tr>
<tr>
<td>14</td>
<td>6</td>
</tr>
</tbody>
</table>

(a) Find the median dress size.

3 of the 25 women have a shoe size of 7

Zoe says that if you choose at random one of the 25 women, the probability that she has either a shoe size of 7 or a dress size of 14 is \( \frac{9}{25} \) because

\[
\frac{3}{25} + \frac{6}{25} = \frac{9}{25}
\]

(b) Is Zoe correct?
   You must give a reason for your answer.

(Total for Question 17 is 2 marks)
18 Daniel bakes 420 cakes.
He bakes only vanilla cakes, banana cakes, lemon cakes and chocolate cakes.

\[ \frac{2}{7} \] of the cakes are vanilla cakes.

35% of the cakes are banana cakes.
The ratio of the number of lemon cakes to the number of chocolate cakes is 4:5

Work out the number of lemon cakes Daniel bakes.

(Total for Question 18 is 5 marks)
19 In the diagram, \( AB, BC \) and \( CD \) are three sides of a regular polygon \( P \).

Show that polygon \( P \) is a hexagon.
You must show your working.

(Total for Question 19 is 4 marks)
20 The density of apple juice is 1.05 grams per cm$^3$.

The density of fruit syrup is 1.4 grams per cm$^3$.

The density of carbonated water is 0.99 grams per cm$^3$.

25 cm$^3$ of apple juice are mixed with 15 cm$^3$ of fruit syrup and 280 cm$^3$ of carbonated water to make a drink with a volume of 320 cm$^3$.

Work out the density of the drink.
Give your answer correct to 2 decimal places.

\[
\text{Density of drink} = \frac{25 \times 1.05 + 15 \times 1.4 + 280 \times 0.99}{320}
\]

\[
\text{Density of drink} = \frac{26.25 + 21 + 274.2}{320}
\]

\[
\text{Density of drink} = \frac{321.45}{320}
\]

\[
\text{Density of drink} \approx 1.00 \text{ g/cm}^3
\]

(Total for Question 20 is 4 marks)
Show that these two triangles are mathematically similar.

(Total for Question 21 is 2 marks)
22 (a) Complete the table of values for \( y = \frac{6}{x} \)

<table>
<thead>
<tr>
<th>( x )</th>
<th>0.5</th>
<th>1</th>
<th>1.5</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y  )</td>
<td>6</td>
<td>3</td>
<td>1.5</td>
<td>1.5</td>
<td>1.5</td>
<td>1.5</td>
</tr>
</tbody>
</table>

(b) On the grid below, draw the graph of \( y = \frac{6}{x} \) for values of \( x \) from 0.5 to 6

(Total for Question 22 is 4 marks)
23 Harley’s house has a value of £160 000 correct to 2 significant figures.

(a) (i) Write down the least possible value of the house.

£ .......................................................

(1)

(ii) Write down the greatest possible value of the house.

£ .....................................................

(1)

The value of Rita’s house increased by 5%.
Her house then had a value of £210 000

(b) Work out the value of Rita’s house before the increase.

£ .....................................................

(2)

(Total for Question 23 is 4 marks)
