You must have: Ruler graduated in centimetres and millimetres, protractor, pair of compasses, pen, HB pencil, eraser, calculator. Tracing paper may be used.

Instructions

- Use black ink or ball-point pen.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided — there may be more space than you need.
- You must show all your working.
- Diagrams are NOT accurately drawn, unless otherwise indicated.
- Calculators may be used.
- If your calculator does not have a π button, take the value of π to be 3.142 unless the question instructs otherwise.

Information

- The total mark for this paper is 80
- The marks for each question are shown in brackets — use this as a guide as to how much time to spend on each question.

Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.
Answer ALL questions.

Write your answers in the spaces provided.

You must write down all the stages in your working.

1 \( E = \{ \text{odd numbers less than 30} \} \)
   \( A = \{3, 9, 15, 21, 27\} \)
   \( B = \{5, 15, 25\} \)

(a) Complete the Venn diagram to represent this information.

A number is chosen at random from the universal set, \( E \).

(b) What is the probability that the number is in the set \( A \cup B \)?

3 The table shows some information about the dress sizes of 25 women.

<table>
<thead>
<tr>
<th>Dress size</th>
<th>Number of women</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>2</td>
</tr>
<tr>
<td>10</td>
<td>9</td>
</tr>
<tr>
<td>12</td>
<td>8</td>
</tr>
<tr>
<td>14</td>
<td>6</td>
</tr>
</tbody>
</table>

(a) Find the median dress size.

3 of the 25 women have a shoe size of 7

Zoe says that if you choose at random one of the 25 women, the probability that she has either a shoe size of 7 or a dress size of 14 is \( \frac{9}{25} \) because

\[
\frac{3}{25} + \frac{6}{25} = \frac{9}{25}
\]

(b) Is Zoe correct?
You must give a reason for your answer.

4 Daniel bakes 420 cakes.
He bakes only vanilla cakes, banana cakes, lemon cakes and chocolate cakes.

\[ \frac{2}{7} \text{ of the cakes are vanilla cakes.} \]

35% of the cakes are banana cakes.
The ratio of the number of lemon cakes to the number of chocolate cakes is 4:5

Work out the number of lemon cakes Daniel bakes.

6 The density of apple juice is 1.05 grams per cm³.

The density of fruit syrup is 1.4 grams per cm³.

The density of carbonated water is 0.99 grams per cm³.

25 cm³ of apple juice are mixed with 15 cm³ of fruit syrup and 280 cm³ of carbonated water to make a drink with a volume of 320 cm³.

Work out the density of the drink.
Give your answer correct to 2 decimal places.

9 The box plot shows information about the distribution of the amounts of money spent by some male students on their holidays.

The table below shows information about the distribution of the amounts of money spent by some female students on their holidays.

<table>

<th>Smallest</th>
<th>Lower quartile</th>
<th>Median</th>
<th>Upper quartile</th>
<th>Largest</th>

(b) On the grid above, draw a box plot for the information in the table.
Chris says,

“The box plots show that the female students spent more money than the male students.”

(c) Is Chris correct?

A train travelled along a track in 110 minutes, correct to the nearest 5 minutes.

Jake finds out that the track is 270 km long.  
He assumes that the track has been measured correct to the nearest 10 km.

(a) Could the average speed of the train have been greater than 160 km/h?  
You must show how you get your answer.

Jake’s assumption was wrong.  
The track was measured correct to the nearest 5 km.

(b) Explain how this could affect your decision in part (a).
