

**Q1.**

Diagram **NOT** accurately drawn

(a) Work out the volume of this solid cuboid.

..... cm<sup>3</sup>

(2)

The solid cuboid is made of plastic.  
The plastic has a density of 0.8 grams per cm<sup>3</sup>.

(b) Work out the mass of the cuboid.

..... grams

(2)

(Total 4 marks)

**Q2.** The volume of a gold bar is 100 cm<sup>3</sup>.  
The density of gold is 19.3 grams per cm<sup>3</sup>.

Work out the mass of the gold bar.

..... grams

(Total 2 marks)

**Q3.**

Diagram **NOT** accurately drawn

The solid shape, shown in the diagram, is made by cutting a hole all the way through a wooden cube.  
 The cube has edges of length 5 cm.  
 The hole has a square cross section of side 3 cm.

(a) Work out the volume of wood in the solid shape.

..... cm<sup>3</sup>

(2)

The mass of the solid shape is 64 grams.

(b) Work out the density of the wood.

..... grams per  $\text{cm}^3$

(2)  
(Total 4 marks)

**Q4.** The density of juice is 4 grams per  $\text{cm}^3$ .  
The density of water is 1 gram per  $\text{cm}^3$ .

315  $\text{cm}^3$  of drink is made by mixing 15  $\text{cm}^3$  of juice with 300  $\text{cm}^3$  of water.

Work out the density of the drink.

..... grams per  $\text{cm}^3$

(Total 3 marks)

**Q5.**

Diagram **NOT** accurately drawn

A solid cylinder has a radius of 4 cm and a height of 10 cm.

- (a) Work out the volume of the cylinder.  
Give your answer correct to 3 significant figures.

..... cm<sup>3</sup>

(2)

The cylinder is made from wood.  
The density of the wood is 0.6 grams per cm<sup>3</sup>.

- (b) Work out the mass of the cylinder.  
Give your answer correct to 3 significant figures.

..... grams

(2)

(Total 4 marks)

**Q6.** The graph can be used to convert between gallons and litres.

The diagram shows a central heating oil tank.

The oil tank is in the shape of a cylinder of length 180 cm and radius 60 cm.

The oil tank contains 200 gallons of oil.

(a) Is the oil tank more or less than  $\frac{1}{2}$  full?

.....

(5)

The oil has a density of  $0.85 \text{ g/cm}^3$ .

(b) Work out, in kg, the mass of the oil in the tank.

..... kg

(3)

<b>Total for Question: 8 marks</b>					

- E1.** This question was answered well. Over 85% of candidates gained 1 or more marks for their answers. Most candidates could find the volume of the cuboid though some attempts at finding the total surface area were seen. In part (b) nearly all candidates either multiplied or divided their answer to part (a) by 0.8. Those who multiplied were able to access both marks for this part. Full marks for the question were awarded to over a half of the candidates entered for this examination.
- E2.** Density is a well understood topic and the success rate in this question was very high with almost all candidates obtaining one mark for attempting to multiply 19.3 by 100 though the answer was only fully correct in about two thirds of cases.
- E3.** Fully correct answers to this question were only given by 23% of candidates. In part (a) it was common to see the volume of the 5cm cube being given correctly but then incorrect calculations for the hole were frequently seen. Some candidates thought the hole was a 3 cm cube and not a square prism with length 5cm. Where candidates tried to subtract two sensible volumes they were awarded a mark, however it was quite common to see candidates try to subtract  $9\text{cm}^2$  away from  $125\text{cm}^3$  and therefore achieve no marks.
- In part (b) full marks were awarded for dividing the mass of 64 grams by the volume calculated in part (a) and 39% of candidates scored 2 marks usually for doing this. A large number of candidates divided volume by mass or multiplied mass and volume and so gained no credit. It was disappointing to see 39% of candidates gaining no marks at all in this question.
- E4.** Over 60% of candidates were awarded at least one mark for their responses to this question. These candidates were able to find the mass of the juice or of the combined

drink to gain one mark.

However, relatively few candidates could make any further progress.

Only about one in eight were able to complete the question successfully. Of those candidates who scored no marks on this question, a significant minority worked out  $15 \div 4$  and  $300 \div 1$  or  $315 \div 5$ .

**E5.** For a standard volume question this was poorly answered. Common errors included circumference  $\times$  height,  $k\pi r^2$  where  $k$  was usually 2 (from 2 ends?), 0.5 or 4. Some candidates evaluated  $\pi \times 4^2$  as  $(\pi \times 4)^2$ .

Part (b) was generally well done with the vast majority of candidates multiplying their answer to part (a) by 0.6.
