

# GCSE Maths – Number

## Estimation and Approximation

Worksheet

**WORKED SOLUTIONS**

This worksheet will show you how to work out different types of estimation and approximation questions. Each section contains a worked example, a question with hints and then questions for you to work through on your own.

This work by [PMT Education](https://www.pmt.education) is licensed under [CC BY-NC-ND 4.0](https://creativecommons.org/licenses/by-nc-nd/4.0/)

## Section A

### Worked Example

**Round 94,721 to the nearest 1000**

**Step 1:** Identify which digits we need to look at for the required rounding.

*When rounding to the nearest 1000, we look at the digit to the right of the thousand's column. This is the hundreds digit.*

94,721  

*The 7 represents the hundreds digit.*

**Step 2:** Now, determine whether we round up or down.

$$7 > 5$$

*Therefore, we round up the 'thousands' digit. This means we round up 4 thousand to 5 thousand.*

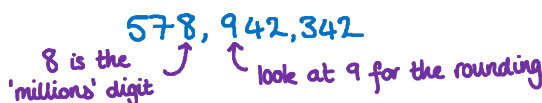

**Step 3:** Now we change all the numbers to the right of the rounded digit to 0s.

*94,721 to the nearest thousand is 95,000.*

### Guided Example

**Round 578,942,342 to the nearest million**

**Step 1:** Identify which digits we need to look at for the required rounding.

578,942,342  

**Step 2:** Now, determine whether we round up or down.

$9 \geq 5$  so round up  
 ...8942342 → ...9000000

**Step 3:** Now we change all the numbers to the right of the rounded digit to 0s.

578,942,342 → 579,000,000  

## Now it's your turn!

If you get stuck, look back at the worked and guided examples.

1. Round 678450 to the nearest 1000

thousands digit (8000) } rounding digit

$4 < 5$  so round down

...8450 → ...8000

678450 rounds to **678000**

2. Round 0.048342 to 3 decimal places

'thousandth' digit ( $\frac{1}{1000}$ ) } rounding digit

$3 < 5$  so round down

...834 → ...800

0.048342 → **0.048000**

3. Round 194.4532 to the nearest whole number

'whole number' digit (4) } rounding digit

$4 < 5$  so round down

...4.45... → ...4

194.4532 → **194**

↖ 194.000... is the same as 194

4. Round 0.00403093 to 3 significant figures

these are the 3.s.f. } rounding digit } 3 place values after the first non-zero digit

$0 < 5$  so round down

...3093 → ...3000

0.00403093 → **0.00403**

5. Round 0.0888991 to 4 significant figures

4.s.f. } rounding digit

$9 > 5$  so round up

However, as the previous digit is also a 9, we cannot add 1.

Instead, replace this 9 with a 0, and add 1 to the previous digit (8).

This has the same effect as  $9 + 1 = 10$ , as shown below:

0.0888991

+ 1  
-----  
10

0.0889000

0.0888991 → **0.08890**

include this 0 because it is now a significant figure

## Section B

### Worked Example

**Estimate**  $603 \times 31$

**Step 1:** Round each number to 1 significant figure.

*Rounding 603 to 1 significant figure:  $603 \approx 600$*

*Rounding 31 to 1 significant figure:  $31 \approx 30$*

**Step 2:** Substitute the rounded values into the equation.

$$603 \times 31 \approx 600 \times 30$$

**Step 3:** Perform the calculation of this new expression.

$$600 \times 30 = \mathbf{18000}$$

The estimation of  $603 \times 31$  is 18,000

### Guided Example

**Estimate**  $742998 \div 709$

**Step 1:** Round each number to 1 significant figure.

$742998 \rightarrow 700000$   
 $4 < 5$   
so round down

$709 \rightarrow 700$   
 $0 < 5$   
so round down

**Step 2:** Substitute the rounded values into the equation.

$$700000 \div 700 \approx$$

**Step 3:** Perform the calculation of this new expression.

$$700000 \div 700 = \mathbf{1000}$$

## Now it's your turn!

If you get stuck, look back at the worked and guided examples.

6. Estimate  $24638 + 44282 \approx 25000 + 44000 \approx 69000$   
 round to 2 significant figures as addition is simpler and this will be more accurate

$$\begin{array}{r} 24638 \rightarrow 25000 \\ \underline{\phantom{00000}} \\ 6 > 5 \text{ so round up} \end{array} \quad \begin{array}{r} 44282 \rightarrow 44000 \\ \underline{\phantom{00000}} \\ 2 < 5 \text{ so round down} \end{array}$$

7. Estimate  $44829 \times 868 \approx 40000 \times 900 \approx 36,000,000$   
 round to 1 s.f.

$$\begin{array}{r} 44829 \rightarrow 40000 \\ \underline{\phantom{00000}} \\ 4 < 5 = \text{round down} \end{array} \quad \begin{array}{r} 868 \rightarrow 900 \\ \underline{\phantom{000}} \\ 6 > 5 = \text{round up} \end{array}$$

8. Estimate  $679348 \div 723 \approx 700000 \div 700 \approx 1000$   
 round to 1 s.f.

$$\begin{array}{r} 679348 \rightarrow 700000 \\ \underline{\phantom{000000}} \\ 7 > 5 = \text{round up} \end{array} \quad \begin{array}{r} 723 \rightarrow 700 \\ \underline{\phantom{000}} \\ 2 < 5 = \text{round down} \end{array}$$

9. Estimate  $908629 \div 0.0722 \approx 900000 \div 0.07 \approx 12857143$   
 round to 1 s.f.

$$\begin{array}{r} 908629 \rightarrow 900000 \\ \underline{\phantom{000000}} \\ 0 < 5 = \text{round down} \end{array} \quad \begin{array}{r} 0.0722 \rightarrow 0.07 \\ \underline{\phantom{000}} \\ 2 < 5 = \text{round down} \end{array}$$

10. Estimate  $\frac{60.3 \div 2.88}{4.94} \approx \frac{60 \div 3}{5} \approx \frac{20}{5} \approx 4$

$$\begin{array}{r} 60.3 \rightarrow 60 \\ \underline{\phantom{00}} \\ 3 < 5 = \text{round down} \end{array}$$

$$\begin{array}{r} 2.88 \rightarrow 3 \\ \underline{\phantom{00}} \\ 8 > 5 = \text{round up} \end{array}$$

$$\begin{array}{r} 4.94 \rightarrow 5 \\ \underline{\phantom{00}} \\ 9 > 5 = \text{round up} \end{array}$$

11. Estimate  $\frac{20.1 \times 698.3}{19.87 \times 5.28} \approx \frac{20 \times 700}{20 \times 5} \approx \frac{14000}{100} \approx 140$

$$\begin{array}{l} 20.1 \rightarrow 20 \\ \quad \downarrow \\ 1 < 5 = \text{round down} \\ 698.3 \rightarrow 700 \\ \quad \downarrow \\ 9 > 5 = \text{round up} \end{array} \quad \begin{array}{l} 19.87 \rightarrow 20 \\ \quad \downarrow \\ 8 > 5 = \text{round up} \\ 5.28 \rightarrow 5 \\ \quad \downarrow \\ 2 < 5 = \text{round down} \end{array}$$

12. Estimate  $\frac{8.8 \times 20.3}{8.996 - 6.03} \approx \frac{9 \times 20}{9 - 6} \approx \frac{180}{3} \approx 60$

$$\begin{array}{l} 8.8 \rightarrow 9 \\ \quad \downarrow \\ 8 > 5 = \text{round up} \\ 8.996 \rightarrow 9 \\ \quad \downarrow \\ 9 > 5 = \text{round up} \end{array} \quad \begin{array}{l} 20.3 \rightarrow 20 \\ \quad \downarrow \\ 3 < 5 = \text{round down} \\ 6.03 \rightarrow 6 \\ \quad \downarrow \\ 0 < 5 = \text{round down} \end{array}$$

13. In a cinema there are 39 rows and in each row there are 28 seats. Each cinema ticket costs £9.75. Work out an estimate for the total income from ticket sales.

$$\begin{array}{l} 39 \rightarrow 40 \\ \quad \downarrow \\ 9 > 5 = \text{round up} \end{array} \quad \begin{array}{l} 28 \rightarrow 30 \\ \quad \downarrow \\ 8 > 5 = \text{round up} \end{array} \quad \begin{array}{l} £9.75 \rightarrow £10 \\ \quad \downarrow \\ 7 > 5 = \text{round up} \end{array}$$

$$\begin{aligned} \text{total seats} &\approx 40 \times 30 \approx 1200 \\ \text{total income} &\approx 1200 \times £10 \approx \text{£12 000} \end{aligned}$$

*This is an over-estimate because we rounded all values up.*

14. Eleanor wants to buy 6 rubbers and 4 pencils. The rubbers cost £0.94 each and the pencils cost 52p each.

Find an estimate for how much this will cost Eleanor in £.

$$\begin{array}{l} £0.94 \rightarrow £1 \\ \quad \downarrow \\ 9 > 5 = \text{round up} \end{array} \quad \begin{array}{l} 52\text{p} = £0.52 \rightarrow £0.50 \\ \quad \downarrow \\ 2 < 5 = \text{round down} \\ \text{[don't round to 1.s.f as this} \\ \text{won't be a very accurate estimate!]} \end{array}$$

$$\begin{aligned} \text{cost} &\approx (6 \times £1) + (4 \times £0.50) \\ &\approx £6 + £2 \\ &\approx \text{£8} \end{aligned}$$

*This is a slight overestimate because we rounded up more than down.*
