Mark Scheme for June 2018

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations available in RM Assessor

| Annotation |  | Meaning |
| :---: | :---: | :---: |
| $\wedge$ | Correct response | Used to indicate the point at which a mark has been awarded (one tick per mark awarded). |
| $\stackrel{3}{ }$ | Incorrect response | Used to indicate an incorrect answer or a point where a mark is lost. |
| AE | Arithmetic error | Do not allow the mark where the error occurs. Then follow through the working/calculation giving full subsequent ECF if there are no further errors. |
| BOD | Benefit of doubt given | Used to indicate a mark awarded where the candidate provides an answer that is not totally satisfactory, but the examiner feels that sufficient work has been done. |
| BP | Blank page | Use BP on additional page(s) to show that there is no additional work provided by the candidates. |
| CON | Contradiction | No mark can be awarded if the candidate contradicts himself or herself in the same response. |
| ECF | Error carried forward | Used in numerical answers only, unless specified otherwise in the mark scheme. Answers to later sections of numerical questions may be awarded up to full credit provided they are consistent with earlier incorrect answers. Within a question, ECF can be given for AE, TE and POT errors but not for XP. |
| L1 | Level 1 | L 1 is used to show 2 marks awarded and L1^ is used to show 1 mark awarded. |
| L2 | Level 2 | L 2 is used to show 4 marks awarded and L2^ is used to show 3 marks awarded. |
| L3 | Level 3 | L3 is used to show 6 marks awarded and L3^ is used to show 5 marks awarded. |
| POT | Power of 10 error | This is usually linked to conversion of SI prefixes. Do not allow the mark where the error occurs. Then follow through the working/calculation giving ECF for subsequent marks if there are no further errors. |
| SEEN | Seen | To indicate working/text has been seen by the examiner. |
| SF | Error in number of significant figures | Where more SFs are given than is justified by the question, do not penalise. Fewer significant figures than necessary will be considered within the mark scheme. Penalised only once in the paper. |
| TE | Transcription error | This error is when there is incorrect transcription of the correct data from the question, graphical read-off, formulae booklet or a previous answer. Do not allow the relevant mark and then follow through the working giving ECF for subsequent marks. |
| XP | Wrong physics or equation | Used in numerical answers only, unless otherwise specified in the mark scheme. Use of an incorrect equation is wrong physics even if it happens to lead to the correct answer. |
| $\wedge$ | Omission | Used to indicate where more is needed for a mark to be awarded (what is written is not wrong but not enough). |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :--- |
| Reject | Alternative and acceptable answers for the same marking point |
| Not | Answers which are not worthy of credit |
| Ignore | Statements which are irrelevant |
| Allow | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| ECF | Underlined words must be present in answer to score a mark |
| AW | Alternative wording |
| ORA | Or reverse argument |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| (b) | (i) | $\begin{aligned} & R=V^{2} / P \text { or } P=V^{2} / R \\ & R=230^{2} / 1000=52.9 \text { or } 53(\Omega) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | or $P=V I$ and $R=V / I$ with $I=4.34(\mathrm{~A})$ <br> This is a 'show that' question so the A1 mark is for giving both the full substitution of values and the final answer. The final answer may be to 2 or more SF. |
|  | (ii) | number of turns, $\mathrm{n}=180 / 1.5$ (= 120) <br> length $(I=\pi d n)=3.14$ (or $\pi) \times 0.014 \times 120=5.28(\mathrm{~m})$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | This is a 'show that' question so the A1 mark is for giving both the full substitution of values and the final answer. The final answer may be to 2 or more SF. |
|  | (iii) | $A=(\rho / / R)=1.1 \times 10^{-6} \times 5.28 / 52.9$ $\begin{aligned} & A=0.11 \times 10^{-6}\left(\mathrm{~m}^{2}\right) \\ & \text { so } \mathrm{swg}=28 \end{aligned}$ | A1 A1 | allow 53 <br> allow solution which calculates diameter of wire using $\pi d^{2} / 4$ rather than finding $A$ <br> give $\max 1 / 3$ for using data from the table, i.e. finding $R=53$ $\Omega$ using correct value of $A$ <br> or $d=0.37(\mathrm{~mm})$ <br> the A marks cannot be awarded unless the $M$ mark is awarded. |
|  |  | Total | 13 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | (a) |  | $\begin{aligned} & \omega=(2 \pi f=) 2 \pi \times 0.15 \text { or } 0.3 \pi\left(=0.942 \mathrm{rad} \mathrm{~s}^{-1}\right) \\ & \mathrm{a}_{\max }=\left(-\omega^{2} A=\right) 4 \pi^{2} f^{2} A=0.050 \\ & A=0.05 /(2 \pi \times 0.15)^{2} \\ & A=5.6 \times 10^{-2}(\mathrm{~m}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | $\omega$ mark can be implicit in calculation $\omega^{2}=0.88 \text { or } 0.89 \text { using } 0.942 \text { or } 0.94$ <br> allow 0.057 (m); N.B. answer is 0.053 if use $\omega$ instead of $\omega^{2}$ mark as a TE max $2 / 3$ |
|  | (b) |  | Maximum energy is transferred between tower (driver) and sphere <br> when sphere (driven) is at/close to the natural frequency of the tower or in this forced oscillation/resonance situation | B1 <br> B1 | allow causes maximum damping of the tower or maximum amplitude of the sphere/AW <br> allow AW e.g. sphere must be driven close to/at the natural/resonance frequency of the tower |
|  | (c) | (i) | $\begin{aligned} & \omega^{2}=k / m \text { or }(2 \pi f)^{2}=k / m \text { or } k A=m a_{\max } \\ & k=\left(m 4 \pi^{2} \mathrm{r}^{2}\right)=6.6 \times 10^{5} \times(2 \pi \times 0.15)^{2} \\ & \text { or }\left(k=m a_{\max } / A\right)=6.6 \times 10^{5} \times 0.05 / 0.056 \\ & k=5.9 \times 10^{5}\left(\mathrm{~N} \mathrm{~m}^{-1}\right) \end{aligned}$ | C1 <br> M1 <br> A1 | allow $\omega$ or $\omega^{2}=0.88$ or 0.89 quoted from (a) ecf value of A from (a) as this is a 'show that' question some definite evidence of working must be shown. <br> not $k=6 \times 10^{5}$ allow answer to 2 or more SF. |
|  | (c) | (ii) | $\begin{aligned} & E=1 / 2 k A^{2}==0.5 \times 5.9 \times 10^{5} \times 0.71^{2} \\ & E=1.5 \times 10^{5}(\mathrm{~J}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | allow value from (c)(i) or 6; $\text { or } a=(\mathrm{k} / \mathrm{m}) \mathrm{A}, \mathrm{~F}=\mathrm{ma}, \mathrm{E}=1 / 2 \mathrm{FA}$ <br> accept 1.48 to 1.51 or value from ecf <br> special case: give $1 / 2$ for $E=3(.0) \times 10^{5}(\mathrm{~J})$ where it is clear <br> that 2 k has been used as the spring constant |
|  |  |  | Total | 10 |  |

| Question |  | Answer | Marks | Guidance |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{3}$ | (a) | (i) | (For circular orbit) centripetal force provided by <br> gravitational force $\frac{(\text { of attraction) }}{}$ <br> $($ Gravitational $/$ centripetal) force is along line joining <br> stars which must therefore be diameter of circle (AW) | A1 | M1 |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | (a) |  | (change in) $\mathrm{KE}=$ (change in) GPE /AW <br> $1 / 2(m+0.8) v^{2}=0.6 m g$ (and hence equation as shown on QP) | M1 <br> A1 | allow $\mathrm{mgh}=1 / 2 \mathrm{Mv}^{2}$ as long as it is clear that m and M are different, i.e. NOT $m g h=1 / 2 m v^{2}$ <br> allow linear motion equation $v^{2}=u^{2}+2$ as and $F=M a$ $(W=) m g=(m+0.8) a ; u=0 \text { and } s=0.6$ |
|  | (b) | (i) | $\begin{aligned} & \left(v^{2}=\right) 4.93 \\ & ( \pm) 0.22 \end{aligned}$ | $\begin{aligned} & \hline \text { B1 } \\ & \text { B1 } \end{aligned}$ | allow 4.9 <br> ( $\pm$ ) 0.2 (same number of decimal places) |
|  |  | (ii) | Point (and error bar) plotted correctly <br> Line of best-fit drawn through all points shown (use protractor tool at $49^{\circ}$ ) | $\begin{aligned} & \hline \text { B1 } \\ & \text { B1 } \end{aligned}$ | tolerance $\pm 1 / 2$ small square; possible ecf from (b)(i) allow ecf from point plotted incorrectly or point omitted |
|  | (c) | (i) | $v^{2}=\frac{1.20 m g}{(m+0.800)} \quad \text { compared with } y=m x+c$ | B1 | allow minimum of gradient $=\mathrm{v}^{2} /[\mathrm{m} /(\mathrm{m}+0.8)]=1.2 \mathrm{~g}$ or expect $y=v^{2}$ and $x=m /(m+0.800)$ so gradient $=1.20 \mathrm{~g}$ |
|  |  | (ii) | one acceptable worst-fit line drawn large triangle used to determine gradient Gradient (used to determine 'worst' g) absolute uncertainty given to one decimal place | B1 <br> B1 <br> B1 <br> B1 | roughly between extremes of top and bottom error bars or by eye; consequential ecfs for rest of (ii) $\Delta x>0.13$; <br> expect steepest $12.5 \pm 0.2$ or shallowest $10.3 \pm 0.2$ <br> if point from bii not plotted steepest line is 12.9 <br> answer from $\pm 0.8$ to $1.1\left(\mathrm{~m} \mathrm{~s}^{-2}\right)$; allow ecf from gradient value |
|  | (d) |  | card appears shorter or time measured shorter calculated speed of trolley larger gradient of graph steeper or $v^{2} \alpha \mathrm{~g} /$ /AW so calculated $g$ is greater | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \\ & \hline \end{aligned}$ | N.B. each B mark is consequential on the previous statement; e.g. ecf max of 3 marks for correct consequences of stating card appears longer or time longer |
|  |  |  | Total | 15 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | (a) | (i) | the flux in the coil changes/ increases/ decreases/ varies (caused by the spinning/rotating magnet) causing a sinusoidal/alternating e.m.f./AW | B1 B1 | or e.m.f. is proportional to /equals rate of change of flux linkage/linking the coil <br> or qualification, e.g. magnet vertical gives minimum flux through core or maximum rate of change of flux or vice versa with magnet horizontal <br> or maximum flux is when emf is zero or minimum flux is when emf is maximum or vice versa |
|  |  | (ii) |  | B1 | allow $\pm$ cos wave of correct period, constant amplitude at least one cycle <br> N.B. quality: curve must look like a reasonable sine wave as one is present on the page to copy |
|  |  | (iii) | $\begin{aligned} & \varphi=B A=V / 2 \pi f N=1.2 /(2 \times \pi \times 24 \times 150) \\ & \varphi=5.3 \times 10^{-5} \\ & \mathrm{~Wb} / T \mathrm{~m}^{2} \end{aligned}$ | B1 <br> B1 | allow no other unit combinations; NOT T m ${ }^{-2}$ |
|  | (b) |  | see page 9 | B1 x 6 |  |
|  |  |  | Total | 11 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | (a) | (i) | $\begin{aligned} & \sin C=1 / n=1 / 1.69(=0.592) \\ & C=36^{\circ} \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ |  |
|  |  | (ii) | Total internal reflection occurs <br> because the angle of incidence (at the surface) is greater than the critical angle/ $36^{\circ}$ | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \end{aligned}$ | allow because $\underline{i>}$ C |
|  | (b) |  | $\begin{aligned} & E=(h c / \lambda=) 6.63 \times 10^{-34} \times 3.0 \times 10^{8} / 450 \times 10^{-9} \\ & E=4.42 \times 10^{-19}(\mathrm{~J}) \\ & \text { energy }=2.76(\mathrm{eV}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | N.B. the answer here must be 2 SF or more |
|  | (c) | (i) | $2.76-2.3=0.46 \mathrm{eV}$ (so only $0.5 \%$ of energy/AW) | B1 | allow $2.8-2.3=0.5 \mathrm{eV}$ and $3.0-2.3=0.7 \mathrm{eV}$ possible ecf from (b) |
|  |  | (ii) | $\begin{aligned} & n=2000 \times 4^{9}\left(=5.24 \times 10^{8}\right) \\ & Q=n e=8.4 \times 10^{-11}(\mathrm{C}) \\ & I=8.4 \times 10^{-11} / 2.5 \times 10^{-9} \\ & \text { average current }=0.034(\mathrm{~A}) \end{aligned}$ | C1 <br> C1 <br> A1 | allow ecf for wrong $n$ <br> allow $34 \mathrm{~m}(\mathrm{~A})$; answer is $1.7 \times 10^{-5} \mathrm{~A}$ if 2000 omitted (2/3) |
