| 2 | a | i | $(v=2 \pi r / t) t=2 \pi 60 / 0.26=1450 \mathrm{~s}$ | B1 | Correct answer is 1449.96 hence allow $1.4 \times 10^{3}$ Do not allow a bare $1.5 \times 10^{3}$ |
|  |  | ii | $\begin{aligned} & \text { (ii) correct substitution into } \mathrm{F}=\mathrm{mv}^{2} / \mathrm{r}: \text { eg } \mathrm{F}= \\ & \left(9.7 \times 10^{3} \times 0.26^{2}\right) / 60 \\ & \mathrm{~F}=10.9 \mathrm{~N} \\ & \hline \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow 11 N |
|  | b | i | THREE correct arrows at $A, B$ and $C$ all pointing towards the centre (judged by eye) | B1 | Ignore starting point of arrow |
|  |  | ii | 1. Greatest reaction force is at $\mathbf{C}$ because it supports weight of sock AND provides the required upward resultant (centripetal) force (WTTE) <br> 2. Least at A because sock's weight provides part of the required downward resultant (centripetal) force (WTTE) | M1 <br> A1 <br> B1 | This is a mandatory M mark. The second mark cannot be gained unless this is scored. <br> Any indication that candidates think that the centripetal force is a third force loses this second and possibly the next mark. They must make correct reference to the resultant force that provides the required centripetal force/acceleration. <br> Allow answers using the equation $\mathrm{F}=\mathrm{mv}^{2} / \mathrm{r}$ such as $\mathrm{N}_{\mathrm{c}}-\mathrm{mg}$ (at C ) = centripetal force $\mathrm{OR} \mathrm{mv}^{2} / \mathrm{r}$ OR $m g+N_{A}($ at $A)=$ centripetal force $O R \mathrm{mv}^{2} / r$ |

| 4 | a |  | The resultant force is zero (WTTE) <br> Forces are weight and force from the spring (allow tension) | B1 <br> B1 | For the first mark allow <br> - sum of forces is zero, <br> - upward force = downward force, <br> - forces cancel each other <br> BUT do not allow forces are balanced <br> Allow force of gravity for weight |
|  | b | i | acceleration is (directly) proportional to displacement and is directed in the opposite direction to the displacement. (WTTE) | $\begin{aligned} & \mathrm{M} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | allow $a=-(2 \pi f)^{2} x$, provided $a$ and $x$ are identified and -ve sign must be explained. Do not allow "acceleration is prop to negative displacement for second mark. Allow always towards the equilibrium position |
|  |  | ii | $\begin{aligned} & x=\operatorname{acos} 2 \pi f t \Rightarrow 2 \pi f=7.85 \text { (expressed in any form) } \\ & f=(7.85 / 2 \pi)=1.25 \quad(1.249 H z) \end{aligned}$ | $\begin{aligned} & \hline \text { M1 } \\ & \text { A1 } \\ & \hline \end{aligned}$ | Do not allow use of Fig 4.2 to show $\mathrm{T}=0.8 \mathrm{~s}$ and hence $\mathrm{f}=1.25 \mathrm{~Hz}$. This scores 0 . |
|  |  | iii | $\begin{aligned} & \text { correct subst}{ }^{\mathrm{n}} \text { in } V_{\max }=(2 \pi \mathrm{f}) A \Rightarrow V_{\max }=2 \pi \times 1.25 \times 0.012 \\ & V_{\max }=0.094 \mathrm{~ms}^{-1} \end{aligned}$ | $\begin{aligned} & \hline \text { C1 } \\ & \text { A1 } \end{aligned}$ | Many will forget to change 12 mm into 0.012 m and have $v=94 \mathrm{~ms}^{-1}$ this scores 1 mark. |
|  | c |  | roughly sinusoidal graph of correct period ie $\mathbf{0 . 8 s}$ $90^{\circ}$ out of phase with displacement graph (i.e. starts at origin with -ve initial gradient) maximum velocity correctly shown as 0.094 \{allow ecf from (iii)\} | $\begin{aligned} & \mathrm{B} 1 \\ & \mathrm{~B} 1 \\ & \mathrm{~B} 1 \end{aligned}$ |  |

The use of ticks to indicate where marks are awarded is strongly advised in all questions but the following questions must always be annotated with ticks. Q3(a)(i), Q4(a), Q5(a)(ii), Q5(a)(iii)

## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks: These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks:
These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the $\mathbf{C}$-mark is given

A marks:
These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.

Note about significant figures:
If the data given in a question is to 2 sf , then allow answers to 2 or more significant figures.
(Significant figures are rigorously assessed in the practical skills.)

## Subject-specific Marking Instructions

Q2a, Q2bii, Q3bi, Q5a should be full annotated on all scripts. Ticks are preferred on all questions where credit is given.

Note about significant figures:
If the data given in a question is to 2 sf , then allow answers to 2 or more sf.
If an answer is given to fewer than 2 sf, then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Guidance Column.

## Mark Scheme for January 2013

## Annotations

| Annotation | Meaning |
| :---: | :---: |
| [FI] ${ }^{\text {a }}$ | Benefit of doubt given |
| [f.1] | Contradiction |
| 3 | Incorrect response |
| [-14 | Error carried forward |
| П-T | Follow through |
| [0] | Not answered question |
| 5 | Benefit of doubt not given |
| Will | Power of 10 error |
| $\square$ | Omission mark |
| 「- | Rounding error |
| $\square$ | Error in number of significant figures |
| - | Correct response |
| +1- | Arithmetic error |
| $5$ | Wrong physics or equation |

The abbreviations, annotations and conventions used in the detailed Mark Scheme are:

| Annotation | Meaning |
| :---: | :--- |
| $/$ | Alternative and acceptable answers for the same marking point |
| $(1)$ | Separates marking points |
| reject | Answers which are not worthy of credit |
| not | Answers which are not worthy of credit |
| IGNORE | Statements which are irrelevant |
| ALLOW | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| ecf | Underlined words must be present in answer to score a mark |
| AW | Alternative wording |
| ORA | Or reverse argument forward |

## Subject-specific Marking Instructions

## Note about significant figures:

If the data given in a question is to 2 sf , then allow answers to 2 or more sf.
If an answer is given to fewer than 2 sf, then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Guidance Column.

## CATEGORISATION OF MARKS

The mark scheme categorise marks on the MACB scheme.
B marks: These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to which it refers must be seen specifically in the candidate's answers.

M marks: $\quad$ These are method marks upon which $\mathbf{A}$-marks (accuracy marks) later depend. For an $\mathbf{M}$-mark to be scored, the point to which it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the dependent A-marks can be scored.

C marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew the equation, then the $\mathbf{C}$-mark is given.

A marks: These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored.
