(b) In the air: weight / force due to gravity
(allow air resistance if included as well)
B1
(Hence) constant acceleration / acceleration at $9.8 \mathrm{~m} \mathrm{~s}^{-2}$
(allow reduced acceleration / terminal velocity if air resistance included)
B1
In water: weight and (large) fluid resistance / upthrust / buoyancy B1
Hence deceleration / slows down B1
5. (i) velocity B1
travels in two opposite directions or equivalent words / increasing and decreasing displacement

B1
(ii) $\mathbf{Z}$ any peak or trough $/ \mathrm{A} / \mathrm{B} / 0 / 3.0 / 6.0 \mathrm{~s} \quad \mathrm{~B} 1$
$\mathbf{M}$ any point where gradient is a maximum $(1.0-1.6$ or $4.4-5.0 \mathrm{~s})$
B1

## If $M$ and $Z$ are given on the diagram then max 1

(iii) tangent to curve drawn B1

6. (i) $\quad N$ is normal to the ramp (judged by eye)

Allow marks even if the labels $N$ and $F$ are omitted
$F$ is parallel and up the ramp
