| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) | (i) | $f=\frac{1}{T}=\frac{1}{10 \times 10^{-3}}$ $\text { frequency = } 100(\mathrm{~Hz})$ | B1 |  |
|  |  | (ii) | $\begin{aligned} & 2.0 \times 10^{-2}=B \times 1.6 \times 10^{-3} \times 400 \\ & B=\frac{2.0 \times 10^{-2}}{1.6 \times 10^{-3} \times 400} \\ & B=3.1 \times 10^{-2}(\mathrm{~T}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow: 2 mark for $3.1 \times 10^{\mathrm{n}} ; \mathrm{n} \neq-2$ (POT error) <br> Answer to 3 sf is $3.13 \times 10^{-2}(\mathrm{~T})$ <br> Special case: 12.5 scores 1 mark; number of turns omitted |
|  |  | (iii) | (e.m.f. =-) rate of change of flux linkage <br> Tangent drawn on Fig. 3.1 at $2.5(\mathrm{~ms})$ or $7.5(\mathrm{~ms})$ or 12.5 (ms) <br> Values substituted to determine the gradient. The gradient must be $12.5 \pm 1.0$ (V) | B1 <br> B1 <br> B1 | Allow: $E=(-) \frac{\Delta(N \phi)}{\Delta t}$ or (e.m.f. $=$ ) gradient <br> Alternative: <br> maximum e.m.f. $=2 \pi f \times$ maximum flux linkage $\quad \mathrm{C} 1$ <br> maximum e.m.f. $=2 \pi \times 100 \times 2 \times 10^{-2}$ <br> maximum e.m.f. $=12.6(\mathrm{~V})$ or $4 \pi(\mathrm{~V})$ |
|  | (b) |  | $\begin{aligned} & P=\frac{V^{2}}{R} \\ & P=\frac{12^{2}}{150} \\ & \text { power }=0.96(\mathrm{~W}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Possible ecf from (a)(iii) |
|  |  |  | Total | 9 |  |

| Question |  |  | Expected Answers | Marks | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | (a) |  | Electromotive force is the energy transferred (from one form of energy) to electrical per unit charge | B1 | Allow: 'electrical energy (gained) per unit charge’ Not: electrical energy per coulomb |
|  | (b) |  | Magnetic flux is the product of the (magnetic) flux density and the area (normal to the field) | B1 | Allow: $\phi=B A$, where $B=$ (magnetic) flux density and $A=$ area. If $\phi=B A \cos \theta$ is used, then $\theta$ must be defined as the angle (between the normal to the plane of the area and the magnetic field) <br> Do not allow 'field strength' for 'flux density' |
|  | (c) | (i) | A changing (magnetic) flux is produced (in the primary coil / in the iron core) <br> The iron core links this (magnetic) flux /(magnetic) flux density to the secondary coils <br> The changing (magnetic) flux / (magnetic) flux density through secondary induces e.m.f. (in secondary coils) | B1 <br> B1 <br> B1 | Allow: A changing (magnetic) flux density is produced (in the primary coil) but not 'changing (magnetic) field' <br> Allow: The rate of change of (magnetic) flux (linkage) induces an e.m.f. (in the secondary coil) |
|  |  | (ii) | Any one from: <br> More coils / turns on secondary <br> Less coils / turns on primary <br> Laminate the core | B1 | Not: Increase frequency of alternating supply |
|  | (d) | (i) | $\frac{n_{\mathrm{s}}}{4200}=\frac{12}{230} \quad \text { (Any subject) }$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Note: A bald answer 219 or 220 scores 2 marks |
|  |  | (ii) |  | C1 <br> A1 <br> C1 <br> A1 | Possible e.c.f. from (ii)1 |
|  |  |  | Total | 12 |  |

| Question |  |  | Expected Answers | Marks | Additional guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | (a) |  | Down(wards) | B1 | Note: Can be on Fig. 5.1 |
|  | (b) |  | (Fleming's) left-hand rule | B1 | Allow: Thumb in direction of force, first finger in direction of (magnetic) field and second finger in direction of (conventional) current |
|  | (c) | (i) | $\begin{aligned} & \text { force }=\text { BIL }=0.080 \times 4.0 \times 5.0 \times 10^{-2} \\ & \text { force }=0.016(\mathrm{~N}) \end{aligned}$ | B1 |  |
|  |  | (ii) | $\begin{aligned} & \text { reading }=2.500-0.016 \\ & \text { reading }=2.484(\mathrm{~N}) \end{aligned}$ <br> The force on core/magnets is up(wards) <br> (According to Newton's third law) the forces (on the rod and steel core/magnets) are equal and opposite | B1 <br> B1 <br> B1 | Allow: 'up and down' as equivalent to 'opposite' |
|  | (d) |  | Resistance increases by a factor of 4 Current decreases by a factor of 4 The force decreases by a factor of 4 force $=0.004(\mathrm{~N})$ | C1 <br> C1 <br> A1 | Possible e.c.f. from (c)(i) <br> Note: force = (c)(i)/4 can score full marks <br> Special case: Allow 1 mark for (resistance doubles, current is halved, hence) force $=0.008(\mathrm{~N})$ |
|  |  |  | Total | 9 |  |

| Question |  |  | Expected Answers | Marks | ignore any edge effects |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | a | (i) | uniformly spaced, vertical parallel lines must begin and end on the plates with a minimum of three lines <br> arrow in the correct direction down | B1 <br> B1 |  |
|  |  | (ii) | $\begin{aligned} \mathrm{E}=\mathrm{V} / \mathrm{d} \quad \mathrm{E} & =60 / 5 \times 10^{-3} \\ & =12000\left(\mathrm{~V} \mathrm{~m}^{-1}\right) \end{aligned}$ | A1 |  |
|  | b | (i) | Use of energy qV and kinetic energy $=1 / 2 \mathrm{mv}^{2}$ $\begin{aligned} & v=[(2 \mathrm{qV}) / \mathrm{m}]^{1 / 2} \\ & v=\left[\left(2 \times 3.2 \times 10^{-19} \times 400\right) / 6.6 \times 10^{-27}\right]^{1 / 2} \\ & v=1.97 \times 10^{5}\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ | M1 <br> M1 <br> A0 |  |
|  |  | (ii) | $\begin{aligned} a=F / m & \quad a=E q / m \\ a & \left.=\left(12000 \times 3.2 \times 10^{-19}\right) / 6.6 \times 10^{-27}\right) \\ & =5.82 \times 10^{11}\left(\mathrm{~m} \mathrm{~s}^{-2}\right) \end{aligned}$ | C1 A1 | Both required for the mark |
|  |  | (iii) |  | $\begin{aligned} & \text { M1 } \\ & \text { A0 } \\ & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Answer will depend on number of sf used by candidate. <br> Using $u=2 \times 10^{5}$ scores $0 / 2$ <br> Allow slight variation in answers that follow from the candidates working |

| c | c | $\begin{aligned} & \mathrm{Eq}=\mathrm{Bqv} \\ & \mathrm{~B}=\mathrm{E} / \mathrm{v}=12000 / 2 \times 10^{5} \\ &=0.060(\mathrm{~T}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Allow one sf unless answer is 0.061 when using $\mathrm{v}=1.97 \times 10^{5}$ |
| :---: | :---: | :---: | :---: | :---: |
| d | d | velocity (produced by p.d / 400 V ) is less <br> force due the magnetic field is reduced / Bqv is less / force due to the electric field is unchanged hence beam deflects down | B1 <br> B1 | Allow the resultant force is downward <br> Allow towards the lower plate |
