Social Cognition - Mark Scheme

Q1.

[AO1 = 3]

1 mark for a correctly named level

Plus

2 marks for a clear and coherent outline of the named level

OR

1 mark for a vague or muddled outline of the named level

0 marks for an outline that does not match the named level

Possible content:

- Egocentric /undifferentiated
- Social informational role taking
- Self-reflective role taking
- Third party/mutual role taking
- Social/conventional system role taking

Q2.

[AO3 = 6]

| Level | Marks | Description |
|-------|-------|--|
| 3 | 5 – 6 | Explanation of two limitations is clear and effective. The answer is coherent and well organised with effective use of specialist terminology. |
| 2 | 3 – 4 | Explanation of two limitations is mostly effective although one or both lack explanation. The answer is mostly clear and organised, with appropriate use of specialist terminology. OR One limitation is explained at top of Level 3. |
| 1 | 1 – 2 | At least one limitation is presented. Explanation lacks detail/is minimal/is muddled. Specialist terminology is either absent or inappropriately used. OR One limitation is explained at top of Level 2. |
| | 0 | No relevant content. |

Possible limitations:

Theory of mind describes a state but does not offer a causal explanation

- Evaluative comparison with other explanations
- Use of evidence against the theory of mind explanation for autism some people with autism can take the perspective of others
- Broader scientific issues eg difficulty showing cause and effect; reductionism
- Only explains deficits cannot explain islets of ability/special talents demonstrated by autistic savants

Credit other relevant limitations.

Q3.

Marks for this question: AO1 = 6, AO3 = 10

| Level | Marks | Description |
|-------|---------|---|
| 4 | 13 – 16 | Knowledge is accurate and generally well detailed. Discussion / evaluation / application is thorough and effective. The answer is clear, coherent and focused. Specialist terminology is used effectively. Minor detail and / or expansion of argument sometimes lacking. |
| 3 | 9 – 12 | Knowledge is evident. There are occasional inaccuracies. Discussion / evaluation / application is apparent and mostly effective. The answer is mostly clear and organised. Specialist terminology is mostly used effectively. Lacks focus in places. |
| 2 | 5 – 8 | Some knowledge is present. Focus is mainly on description. Any discussion / evaluation / application is only partly effective. The answer lacks clarity, accuracy and organisation in places. Specialist terminology is used inappropriately on occasions. |
| 1 | 1 – 4 | Knowledge is limited. Discussion / valuation / application is limited, poorly focused or absent. The answer as a whole lacks clarity, has many inaccuracies and is poorly organised. Specialist terminology either absent or inappropriately used. |
| | 0 | No relevant content. |

Please note that although the content for this mark scheme remains the same, on most mark schemes for the new AQA Specification (Sept 2015 onwards) content appears as a bulleted list.

AO1

There is a range of material that could be relevant to this question. Selman's stages of perspective taking is directly focused on the understanding of others. Order of stages is crucial; however the age ranges of the different stages differs slightly from book to book so examiners should accept ages that are roughly in the appropriate range.

Development of theory of mind is also directly relevant to the question as it involves children's understanding of themselves as a precursor to understanding of others.

Reference might also be made to the role of the mirror neuron system in social cognition.

Finally, candidates may present stages in the development of the self as it interacts with others eg imitation, gaze cueing, protoimperative pointing and pretend play. Such material may earn marks insofar as the focus of the answer is on the understanding of others.

AO3

Research evidence should provide effective material whichever approach is taken to the question, as there are many studies investigating the development of the self. This includes studies of both perspective taking and theory of mind. Implications of findings should be clear, and a consideration of inconsistent findings would be an effective source of. Methodological evaluation, such as the complicating role of language development and problems of working with small children, would be relevant insofar as it affects the validity and / or reliability of research findings. General commentary may include the rapid changes in methods of communication in the digital age, the problem of individual differences, and applications of research to eg education. Relevant discussion could include: cultural bias and differences, gender bias and differences, ethical issues, nature / nurture; applications of findings eg to education.

| Level | Marks | Description |
|-------|---------|---|
| 4 | 13 – 16 | Knowledge is accurate and generally well detailed. Discussion / evaluation / application is thorough and effective. The answer is clear, coherent and focused. Specialist terminology is used effectively. Minor detail and / or expansion of argument sometimes lacking. |
| 3 | 9 – 12 | Knowledge is evident. There are occasional inaccuracies. Discussion / evaluation / application is apparent and mostly effective. The answer is mostly clear and organised. Specialist terminology is mostly used effectively. Lacks focus in places. |
| 2 | 5 – 8 | Some knowledge is present. Focus is mainly on description. Any discussion / evaluation / application is only partly effective. The answer lacks clarity, accuracy and organisation in places. Specialist terminology is used |

Q4.

Marks for this question: AO1 = 6, AO3 = 10

1 - 4

inappropriately on occasions.

absent or inappropriately used.

No relevant content.

Knowledge is limited. Discussion / evaluation / application is limited, poorly focused or absent. The answer as a whole lacks clarity, has many inaccuracies

and is poorly organised. Specialist terminology either

Please note that although the content for this mark scheme remains the same, on most mark schemes for the new AQA Specification (Sept 2015 onwards) content appears as a bulleted list.

AO1

The mirror neuron system was identified in monkeys in the 1990s. These neurons fire when an animal makes a meaningful movement and also when it observes another animal making the same movement. Humans are also assumed to have a mirror neuron system, so that neurons involved in, for instance, producing facial expressions, fire when facial expressions are observed in others. This firing is thought to activate the appropriate feelings associated with that facial expression, allowing us to experience the same feelings we identify in others. It is assumed that this could be the foundation of our abilities to understand and empathise with others ie the mirror neuron system is basic to social cognition.

Examiners should note that human research into mirror neurons often uses 'MU suppression' in the EEG as a measure of mirror neuron activity. Candidates are likely to refer to this.

AO3

It is likely that the fundamental research studies of De Pellegrino, Rizzolatti and others will feature in the discussion. These studies were single cell recordings carried out on monkeys, and established the existence of mirror neurons. There have been many similar studies since.

Research studies on human participants have in general used indirect techniques, such as EEG recordings ('mu desynchronisation'), and this is an important evaluative point. Further commentary on the role of mirror neurons might include the problems in defining 'social cognition', problems in extrapolating from animals to humans, ethical issues and the more complex nature of human social behaviour.
