<h1 style="margin: 0;">Psychology</h1> <h2 style="margin: 0;">Paper 2</h2>					
Sample assessment material for first teaching September 2017 Time: 1 hour 20 minutes				Paper Reference 1PS0/02	
You must have: Calculator, a ruler					Total Marks <input style="width: 100px; height: 40px;" type="text"/>

Instructions

- Use **black** ink or ball-point pen except for graph where you should use a pencil.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- There are six sections in this question paper.
Section A – answer **all** questions in Section A
Sections B to F – select **two** sections from B to F. Answer ALL questions in these sections.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- You must **show all your working out**, with **your answer clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 79.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk (*)**, marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

SECTION A

Research methods – How do you carry out psychological research?

Answer ALL questions in this section. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

- 1 Samad asks students to take part in a study. Six boys and two girls agree to take part.

He tests the recall of the students by showing them 15 words and giving them a 5-second interference task. Then the students are given a set of 15 words and a 25-second interference task.

- (a) Identify the experimental research design used in Samad's study.

(1)

- A Independent measures design
- B Matched pairs design
- C Mixed design
- D Repeated measures design

- (b) Give **two** reasons why the sample used in this study is not representative.

(2)

.....

.....

.....

.....

(c) The results of Samad's study are shown in **Table 1**.

Participant	Condition A Number of words recalled after 5-second interference task	Condition B Number of words recalled after 25-second interference task
A	10	5
B	11	6
C	14	4
D	9	6
E	12	8
F	13	7
G	10	6
H	10	8

Table 1

(i) Complete the bar chart for Condition B, including the label and scale for the y-axis.

(3)

A bar chart to show the number of words recalled from a list of 15 words by participants after a 25-second interference task

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

(ii) Calculate the mean score for participant recall for Condition A (after 5 seconds of interference).

You should give your answer to 2 decimal places.

(2)

Mean score

(iii) Calculate the median score for participant recall after 25 seconds of interference (Condition B).

(2)

Median score

(d) Samad calculated the ratio of words recalled in each condition for his participants and displayed this in **Table 2**.

Participant	Condition A Number of words recalled after 5-second interference task	Condition B Number of words recalled after 25-second interference task	Ratio of words recalled in each condition
A	10	5	2 : 1
B	11	6	11 : 6
C	14	4	7 : 2
D	9	6	3 : 2
E	12	8	3 : 2
F	13	7	13 : 7
G	10	6	5 : 3
H	10	8	

Table 2

Calculate the ratio of words recalled for the remaining participant.

- 2 Milgram investigated obedience to an authority figure. In his original study he wore an official laboratory coat as a uniform.

He told the participants to give a 450-volt electric shock to a fake 'learner' each time they answered a question wrong. The 'learner' and participants were not in the same room.

The electric shocks were not actually real.

Figure 1 shows the results from four different studies conducted by Milgram, including his original study.

Figure 1

- (a) Describe, using the data in **Figure 1**, the results for wearing and not wearing a uniform on levels of obedience.

(2)

.....

.....

.....

.....

- (b) It could be claimed that how close a person is to a 'learner' will impact on whether or not they would obey instructions to harm the 'learner'.

Give **one** reason why the data in **Figure 1** could support this claim.

(1)

(Total for Question 2 = 3 marks)

- 3 Dimah gathered data about the age that adults had been diagnosed with unipolar depression. The data is shown in **Table 3**.

Participant	Age when diagnosed with unipolar depression (years)
A	21
B	29
C	24
D	28
E	21
F	27
G	21
H	28

Table 3

Calculate the mode for this data.

.....

.....

(Total for Question 7 = 2 marks)

- 8 Ian investigates the onset of conservation of volume in children. He uses an equal number of children aged four, five, six and seven years old.

Figure 3

Ian uses three cups as shown in **Figure 3**.

Cups A and B are the same shape with the same volume of liquid.

He pours water from cup B into cup C, which is a different shape.

He asks the children whether cup A or cup C has more water in it.

Ian records the number of errors made by the children.

Ian writes a hypothesis for his study, which includes a dependent variable.

- (a) Name the dependent variable for Ian's study.

(1)

5	180
6	104
7	54

Table 4

Calculate the percentage of errors made by the six-year-old children.

(2)

Percentage of errors made by the six-year-old children

(c) Ian could have used a single- or double-blind technique in his study.

Give **one** reason why Ian may use a double-blind technique in this study.

(1)

(Total for Question 8 = 4 marks)

- *9 Asch (1951) conducted an experiment to investigate whether social pressure from a majority group could affect conformity rates of others.

Asch sampled 50 male students to participate in a 'vision test' using a line judgement task shown in **Figure 4**.

Figure 4

Seven confederates to the study had already been told to give the same response, some accurate and some inaccurate.

Asch then put a participant in a room with these seven confederates.

Each person in the room had to say which line (A, B or C) was most like the target line. The accurate answer was always obvious. The participant always gave their response last.

The number of times that each participant conformed to the majority view, when it was incorrect, was recorded by Asch.
